Front View of the Printed Wiring Board

The image shows the underside of a LEGO Mindstorms robot chassis. A central printed wiring board (PCB) is visible, populated with various electronic components. A multi-colored flat ribbon cable is connected to the board. The gear train, consisting of several white plastic gears of different sizes, is visible on the right side. The chassis is black and has a rectangular shape with rounded corners. A small screw is visible on the right side of the chassis.
