2. The second part outlines the specific steps involved in budgeting and forecasting. This includes identifying key areas of expenditure, estimating costs, and setting realistic targets for revenue and expenses.

3. The third part focuses on monitoring and controlling the budget. It describes how regular reviews and reports can help identify variances from the plan and allow for timely adjustments.

4. The fourth part addresses the challenges commonly encountered during the budgeting process, such as uncertainty in future events and limited resources. It offers strategies to mitigate these risks and ensure the budget remains viable.

5. Finally, the document concludes by stressing the role of effective communication in successful budget management. Clear reporting and collaboration between stakeholders are essential for achieving the organization's goals.

[illegible]

Case	Age	Sex	Duration	Location	Findings
1	25	M	10 years	Left lower lobe	Small, well-circumscribed, solid nodule
2	35	F	5 years	Right upper lobe	Large, irregular, spiculated mass
3	45	M	3 years	Left upper lobe	Small, well-circumscribed, solid nodule
4	55	F	15 years	Right lower lobe	Large, irregular, spiculated mass
5	65	M	8 years	Left lower lobe	Small, well-circumscribed, solid nodule
6	75	F	20 years	Right upper lobe	Large, irregular, spiculated mass

[illegible]

Condition	Control (%)	MCI (%)	AD (%)
A	~95	~85	~75
B	~90	~80	~70
C	~85	~75	~65
D	~95	~90	~85

[illegible]

Figure 1 consists of five line graphs labeled (a) through (e), each showing a parameter over a 14-day period. The x-axis for all graphs is 'Day' with markers at 0, 2, 4, 6, 8, 10, 12, and 14. The y-axis for each graph has its own scale.

- (a) Body weight (g): The y-axis ranges from 0 to 200. The weight starts at approximately 100g on day 0 and increases steadily to about 150g by day 14.
- (b) Food intake (g): The y-axis ranges from 0 to 30. Food intake starts at about 10g on day 0 and increases to approximately 20g by day 14.
- (c) Water intake (g): The y-axis ranges from 0 to 30. Water intake starts at about 10g on day 0 and increases to approximately 20g by day 14.
- (d) Urine volume (g): The y-axis ranges from 0 to 30. Urine volume starts at about 10g on day 0 and increases to approximately 20g by day 14.
- (e) Urine pH: The y-axis ranges from 5 to 8. Urine pH starts at approximately 6.0 on day 0, dips slightly to 5.8 on day 2, then rises to about 7.5 by day 14.
