

Remove label from battery pack contacts and insert battery into back of radio until it clicks (refer to instructions on reverse of this card).

Press the **16** key to switch radio on. The radio switches on with Channel 16 selected, at mid level. The squelch is automatically selected after 2 seconds (background noise will be present if there is no signal received).

Press the **▲** and **▼** keys to increase or decrease audio volume.

Press the **SQ** key to select / deselect squelch operation.

Press the **PTT** (Press To Talk) button on the side of the case to transmit, release to receive. The LED illuminates to confirm that transmission is taking place.

Press the **13** or **6** key to select alternative channel, indicated by a flashing orange LED.

Press the **16** key for reselection of channel 16, confirmed by a flashing red LED.

Press the **16** key for 2 seconds to switch radio off. All channel LEDs illuminate to confirm.

PTT Key

Press & hold to transmit
Release to receive

Battery Life Guidelines

The radio has been designed to exceed the requirements of battery life for GMDSS handheld radios. However, use transmit sparingly to maximise battery usage.
