

MS-9500 Work Basis

Optical Mouse (MS-9500):

1. When the mouse was moved, the optical sensor would detect the different between two points, and then the sensor will send the signal to the MCU.
2. The MCU will encode the signal and modulate the signal that uses FSK modulation type).
3. Through the 27 MHz RF circuit transmit the modulation signal.

Receiver (MS-9500):

1. When the receiver receives the modulation signal will demodulate signal through RF circuit. And responds signal to MCU.
2. The MCU meeting decodes the signal PC acceptable format.

ps. FSK: Frequency Shift Key
MCU: Micro Control Unit
RF: Radio Frequency
