Chomerics Test Services.

TEST REPORT
NVLAP Accredited Laboratory

ADMINISTRATIVE DATA

Purpose of Test:	FCC Certification
Test Specification:	FCC Part 15 Subpart C
Manufacturer:	Scully Signal Company
Manufacturer's Type or Model Number:	Vehicle Data Computer
Number of Items Tested:	Two (2)
Date of Test:	April 7, 1999
Test Observed By:	Richard Barbaro
Affiliated With:	Chomerics Test Services
Test Location:	Chomerics Open Area Test Site A
Tests Conducted By:	Richard Barbaro
Condition of Test Equipment Upon Arrival:	Good
Customer's Equipment Returned VIA:	Held for Certification

TEST RESULTS

The Scully Signal Company Vehicle Data Computer meets the FCC Part 15 Subpart C radiated and conducted emissions limits as configured and operated for testing.

Chomerics has tested the version of the device without connectors. Test data for the device with connectors would be the same based on the fact that the addition of connectors would have no impact on the device's EMI characteristics.

Radiated emission measurements were performed to determine compliance with the 2.7" and 5" diameter coil transducers. The 5" coil transducer was the primary test. The 2.7" coil transducer was tested at the frequencies that generated the highest signals from the 5" coil transducer.

The Scully Signal Company Vehicle Data Computer is a device that transmits data of mileage and usage via hand held remote. A 12 Volt DC battery was used for normal operation for emissions tests.

The equipment under test was set up as illustrated on Form-CTS-014.

Document #: TR2081.99

Date: April 29, 1999

TEST SERVICES FACILITY INFORMATION

Chomerics' test facility is recognized under the National Voluntary Laboratory Accreditation Program (NVLAP) for NVLAP Codes 12/C01 and 12/R01. Tests within this report not conforming to 12/C01 and 12/R01 NVLAP Codes are not covered under Chomerics NVLAP accreditation.

Chomerics' test facility operates under the current revision of Chomerics Quality Assurance (QA) Manual Document Number QA002.

The QA manual has been constructed to reflect a quality program in accordance with the requirements of the National Institute of Standards and Technology (NIST), ISO 9002, ISO Guide 25, NIST Handbook 150, EN 45001, MIL-I-45208A, MIL-STD-461D, 462D and Chomerics Quality Assurance Program (QAP).

The QA manual outlines and describes the procedures for establishing and maintaining the quality of analysis, research, inspection, and testing within Chomerics Test Service (CTS).

This test report does not represent an endorsement by the U.S. Government.

The results and/or conclusions within this test report refer and/or apply only to the unit(s) tested as defined by this report.

Measurements performed for this test are traceable to the National Institute of Standards and Technology (NIST) based on the fact that all test equipment used for the measurements were previously calibrated using standards traceable to NIST.

No deviations, additions to, or exclusions from the test specification(s) were made.

The system amplitude accuracy for the measurements made during the radiated emission tests was $\pm 3\text{dB}$.

TEST SITE DESCRIPTIONS

The following is a description of Test Services' Open Area Test Sites. Refer to Administrative Data on page 2; line 9 for the specific test site used for testing.

OPEN AREA TEST SITE A: Chomerics' Open Area Test Site "A" is located in the parking lot behind the Seeger Building at Chomerics, 84 Dragon Court, Woburn, Massachusetts (Figure 1).

The Open Area Test Site "A" enclosure is a wooden structure measuring 56 x 30 x 25 feet in size with galvanized steel sheet metal used as the ground plate. The structure is sized to allow 3 meter measurements and is heated and/or air conditioned. Photographs of the site and site attenuation data are on file with the Federal Communications Commission.

The supporting structure used for support of the equipment under test is a wooden rotatable platform .8 meters high. A similar supporting structure is used for the measuring equipment. The mast supporting the antenna can be adjusted from one to four meters in height.

OPEN AREA TEST SITE A

Figure 1

Key:  = Power board

OPEN AREA TEST SITE B: Chomerics' Open Area Test Site "B" is located in the lower parking lot behind the Seeger Building at Chomerics, 84 Dragon Court, Woburn, Massachusetts (Figure 2).

Photographs of the site and site attenuation data are on file with the Federal Communications Commission. Parking is permitted on one side of Test Site "B" at a discrete distance from the imaginary ellipse.

The Open Area Test Site "B" enclosure is a wooden structure measuring 56 X 30 X 25 feet in size with galvanized steel sheet metal used as the ground plane. The structure is sized to allow both 3 and 10 meter measurements and is heated and/or air conditioned. Photographs of the site and site attenuation data are on file with the Federal Communications Commission.

The structure used to support equipment under test is a 14 foot diameter motorized turntable. The sheet metal surface is flush with the ground plane. To ground the turntable, 175 copper fingers (1" x 1.5") are mounted around the outer edge of the turntable using machine screws. The spring fingers are equally spaced and provide a uniform interface between the turntable metal surface and ground plane. When needed for tabletop equipment, a wooden table measuring 3 x 6 feet in size is positioned at the center of the turntable, at the proper height above the ground plane. The addition at the end of the Open Area Test Site "B" is the location for the test personnel and equipment to ensure they are outside the imaginary ellipse.

Both Test Site A and B are listed with the Federal Communications Commission (FCC).

OPEN AREA TEST SITE B

Document #: TR2081.99
Date: April 29, 1999

Equipment Calibration: The calibration of Chomerics test facility equipment is controlled under the current revision of Chomerics Laboratory Test Equipment Calibration Manual Document Number QA001.

The test equipment used throughout this test sequence conforms to laboratory calibration standards, MIL-STD-45662A, traceable to the National Institute of Standards and Technology (NIST). The date of the next scheduled calibration is listed in the table above for Chomerics Test Services equipment used during testing.

All test equipment is calibrated in one year intervals.

Test Personnel: The test personnel used to perform or supervise the tests are accredited by the National Association of Radio and Telecommunications Engineers, Inc. (NARTE) as Certified Electromagnetic Compatibility Engineers (N.C.E.) and Technicians (N.C.T.).

RADIATED EMISSIONS
9 kHz to 1000 MHz

Test No: ONE (1)

Equipment Tested: Scully Signal Company Vehicle Data Computer

Configuration: For small devices, the devices were set up on a wooden turntable 3 meters from the tunable dipole antenna.

The support equipment needed to run the Vehicle Data Computer in a normal mode of operation consisted of the following:

1. 12 Volt DC Battery

Any emissions radiating from the Vehicle Data Computer were maximized by rotating the test table and placing the cables in their worst case configuration.

Test Mode: Continuous transmitting of data

Results: The Scully Signal Company Vehicle Data Computer meets the FCC Part 15 Subpart C radiated emissions limits as configured for testing.

Fixes: None

CONDUCTED EMISSIONS

The EUT runs off of DC power, therefore, no conducted emission tests were performed.

CABLE CONFIGURATION

The following is a list of cables that were exiting the equipment under test:

1. Odometer Input
2. Hours Input
3. Coil Output
4. Programming I/O
5. Power/Ground

SUMMARY OF RECOMMENDATIONS

The Scully Signal Company Vehicle Data Computer will require no modifications in order to insure compliance with the FCC Part 15 Subpart C radiated and conducted emission requirements for digital devices.

Please note that if any modifications and or fixes were implemented to the EUT to achieve compliance, other approaches to solving the problem may exist. In addition, any EMI/EMC shielding products listed in this report may be substituted with an equivalent.
