RE: FCC ID: GSARFT1A

I have a few comments on this Application.

- 1 The instruction/manual does not contain the warning statement about not modifying the device. Please include the non-modification statement in accordance with CFR47 15.21.
- 2 There is no indication that the device transmits under the 5-sec time constraint of 15.231. The device appears to function automatically during alarm conditions, however, "A transmitter activated automatically shall cease transmission within 5 seconds after activation." Please verify that the device meets this requirement.
- 3 While the manual states that supervisory transmissions occur once every 60 minutes, there is no indication as to how long the transmitter is on during this supervisory condition. This supervisory transmission is limited to no more than one second during on hour. Switch 3 is an on/off toggle switch that selects a 15 min or one hour supervisory mode. The supervisory mode in the US can ONLY BE FOR ONE SECOND IN 60 MINUTES. Please explain how this switch is made inaccessible for use in the US. Or, please explain how this device is limited to one second TOTAL transmit time within the one hour limit for 15.231. For example, a timed 250ms transmission every 15 minutes would meet the one second total transmit time in one hour.
- 4 The instruction/manual states that there is a 'tracking' mode. Please show how this tracking mode does not violate the 5-second transmission limitation or the other data/time limitations of 15.231.
