GENERAL INFORMATION

- 1 APPLICANT : SILITEK CORPORATION.
- 2 ADDRESS : 10F, 25, SEC. 1, TUNG HWA S. RD.,
TAIPEI, TAIWAN, R. O. C.
- 3 MANUFACTURER : SILITEK CORPORATION.
- 4 ADDRESS : 10F, 25, SEC. 1, TUNG HWA S. RD.,
TAIPEI, TAIWAN, R. O. C.
- 5 DESCRIPTION OF EUT :
- EUT : Computer Keyboard
- FCC ID : GYUR66SK
- Model Number : SK-2800
- Serial # : N/A
- Data Cable : SHIELDED
- Power Cord : N/A
- Power Supply Type : N/A

6 FEATURES OF EUT :

- | | | |
|-----|--|---|
| 6.1 | PC/AT, PS/2
Mode Selection | This keyboard is designed to be AT, PS/2 mode selection is done by auto-switchable. |
| 6.2 | Mode
Indicators | There are three LEDs on the keyboard to indicate "Caps Lock", "Num Lock" and "Scroll Lock". The LEDs are "toggled". The first depression of the key turns on the LED. The second depression turns the LED off and so on. LEDs are off on power-up or software reset, but will flash during power-on initialization. |
| 6.3 | Type Ahead
Capability | The keyboard has 16 keys type ahead capability. This means that you can depress 16 keys before host can receive. If more keys are pressed before the host allows keyboard output, the additional data is lost. |
| 6.4 | Typematic
Delay and
Repeat Rate | With the exception of the Pause key, all keys are typematic. When a key is pressed and held down, the keyboard delays 0.5 sec. and begins sending a make code for that key at a rate of 10.9 characters per second. (The delay is called typematic Delay and the rate is called Repeat Rate.) |
| 6.5 | Pseudo
N-key
Roll-over
Capability | The "N" key roll-over capability where "N" is the total number of keys on the keyboard "N" key roll is the number of keys that may be held depressed simultaneously and have the keyboard generate the appropriate code for each pressed and released key without keyboard interruption. Normally "N" equal to two. |
| 6.6 | Diagnostic
Test | The keyboard microprocessor will perform a diagnostic self-test after Power-up or after the host system signals the keyboard to perform a software Reset. The microprocessor will check its data memory locations, do a sum-check internal RAM check and check for any depressed keys. If the diagnostic test is correct, the keyboard will transmit an "AA HEX" code. This will be the first transmission following a Power-Up condition. If the diagnostic test was unsuccessful, then the keyboard will transmit an "FD/FC HEX" code. In either case, after the diagnostic check the keyboard will begin normal operation. |
