Test Report Details:

Tests Performed By:	Underwriters Laboratories Inc. 12 Laboratory Drive Research Triangle Park, NC 27709
Tests Performed For:	Hunter Fan Company 2500 Frisco Avenue Memphis, TN 38114 USA
Applicant Contact:	Mr. Chris Williams Safety and Test Engineer (901) 248-2342 (901) 248-2382 - FAX
Test Report Number:	030364A
Test Report Date:	December 01, 2003 Revised 2-14-2005 to include new "Safe Exit" features
Product Type:	Remote Control for Ceiling Fan/Lamp
Model Number:	W62 and W63
Sample Serial Number:	Unserialized, production sample
Sample Tag Number:	0535367-001
EUT Category:	Transmitter - Low Powered
EUT Type:	Hand Held
Sample Receive Date:	November 17, 2003
Testing Start Date:	November 24, 2003
Date Testing Complete:	November 24, 2003 (follow-up test performed February 2, 2005)

Underwriters Laboratories Inc. reports apply only to the specific samples tested under stated test conditions. All samples tested were in good operating condition throughout the entire test program. It is the manufacturer's responsibility to assure that additional production units of this model are manufactured with identical electrical and mechanical components. Underwriters Laboratories Inc. shall have no liability for any deductions, inferences or generalizations drawn by the client or others from Underwriters Laboratories Inc. issued reports. This report shall not be used to claim, constitute or imply product certification, approval, or endorsement by NVLAP, A2LA, or any agency of the US government.

This report may contain test results that are not covered by the NVLAP or A2LA accreditation. The scope of accreditation is limited to the specific tests that are listed on the NVLAP and/or A2LA certificates provided at the end of this report.

Summary of Testing:

Test #	Test Name Test Requirement/Specification	Comply	Does Not Comply	See Remark
1	Radiated Disturbance Emissions - 30 MHz to 1000 MHz 47 CFR Part 15, Subpart C / 47 CFR Part 15, Subpart C, Section 15.209 and 15.231 Canada RSS-210, Issue 5, Amendment / Canada RSS-210, Issue 5, Amendment Section 6.1.1(e)	X	-	
2	Radiated Disturbance Emissions - Above 1 GHz 47 CFR Part 15, Subpart C / 47 CFR Part 15, Subpart C, Section 15.209 and 15.231 Canada RSS-210, Issue 5, Amendment / Canada RSS-210, Issue 5, Amendment Section 6.1.1(e)	X	-	
3	Radiated Disturbance Emissions - Peak-to-Average Ratio 47 CFR Part 15, Subpart C / 47 CFR Part 15, Subpart C, Section 15.231 Canada RSS-210, Issue 5, Amendment / Canada RSS-210, Issue 5, Amendment Section 6.1.1(e)	X	-	
4	Radiated Disturbance Emissions - Occupied Bandwidth 47 CFR Part 15, Subpart C / 47 CFR Part 15, Subpart C, Section 15.231 Canada RSS-210, Issue 5, Amendment / Canada RSS-210, Issue 5, Amendment Section 6.1.1(e)	X	-	
5	Radiated Disturbance Emissions - Transmission Duration 47 CFR Part 15, Subpart C / 47 CFR Part 15, Subpart C, Section 15.231 Canada RSS-210, Issue 5, Amendment / Canada RSS-210, Issue 5, Amendment Section 6.1.1(e)	X	-	
6	Radiated Disturbance Emissions - Restricted Bands 47 CFR Part 15, Subpart C / 47 CFR Part 15, Subpart C, Section 15.205 Canada RSS-210, Issue 5, Amendment / Canada RSS-210, Issue 5, Amendment Section 6.2.2(t1)	X	-	

Remarks:

- 1) Canada: Test performed on Industry Canada Registered Site IC-2953. Canada Emissions designator L1D14K4.
- 2) Device is exempt from routine RF exposure testing per FCC Part 2.1091.
- 3) Device contains an integrated antenna. It is not detachable or replaceable by the user.
- 4) Device contains a "Safe Exit" mode that performs a manually activated transmission and begins a countdown to an automatically activated transmission.
 - a) The initial manually activated transmission lasts for 5.00 seconds after release of button. This dims the lamp to 50%. This is equal to the maximum 5 seconds permitted by FCC Part 15.231(a)(1) and RSS-210 Section 6.1.1.
 - b) The automatically activated transmission begins 10 seconds after the manual transmission ends. This transmission is 4.9 seconds in duration and gradually dims the lamp to off. This is less than the 5 second maximum duration permitted for automatic devices in FCC Part 15.231(a)(2) and RSS-210 Section 6.1.1.
- 5) Other buttons cease transmission less than 1 second after button release. This satisfies the 5 second maximum permitted by FCC Part 15.231(a)(1) and RSS-210 Section 6.1.1.

Conclusion:

The tests listed in the Summary of Testing section of this report have been performed and the results recorded by Underwriters Laboratories Inc. in accordance with the procedures stated in each test requirement and specification. The test list was determined by the Applicant as being applicable to the Equipment Under Test. As a result, the subject product has been verified to comply or not comply as noted in the Summary of Testing with each test specification. The test results relate only to the items tested.

Test Facilities:

Test Location A) 10-Meter Anechoic Chamber (Industry Canada - IC 2953, NVLAP - 200246-0, VCCI - R-722)

Constructed by Lindgren RF Enclosures, this room consists of a 17.9 by 12 by 8.3 m (inside clearance) shielded room lined with TDK absorber material. The walls, floor (conducting ground plane) and ceiling are constructed of double sided galvanized sheet steel supported by 19 mm thick particle board. The interior walls and ceiling are covered with 10 by 10 cm, 4.6 mm thick ferrite tiles and partially covered with polystyrene absorber cones. Removable floor tiles and cones covering the floor between the EUT and antenna are provided when RF immunity testing is performed.

Room is provided with a 4.0 m diameter embedded turntable and a 1.2 by 2.1 m and 2.4 by 2.4 m double knife edge doors for access. Also, the room is fed electrical EUT power via permanently installed filters and is provided with a permanently mounted video surveillance camera. A remotely controllable antenna mast is located in the room for positioning the measuring antenna from 1 to 4 m above the ground plane.

Test Location B) Compact Anechoic Chamber

Constructed by Lindgren RF Enclosures, this room consists of a 6 by 3 by 2.9 m (inside clearance) shielded room lined with TDK absorber material. The walls, floor, and ceiling are constructed of double sided galvanized sheet steel supported by 19 mm thick particle board. The interior walls and ceiling are covered with 10 by 10 cm, 4.6 mm thick ferrite tiles and partially covered with polystyrene absorber cones. Removable floor tiles and cones cover the floor between the EUT and antenna.

Room is provided with a 1.2 by 2.1 m double knife edge door for access. Also, the room is fed electrical EUT power via permanently installed filters and is provided with a video camera.

Test Location C) RF Shielded Room (VCCI - C-744, NVLAP - 200246-0)

Constructed by Lindgren RF Enclosures, this room consists of a 7.3 by 4.3 by 2.7 m (inside clearance) shielded room. The walls, floor (conducting ground plane) and ceiling are constructed of double sided galvanized sheet steel supported by 19 mm thick particle board. Room is provided with a 1.2 by 2.1 m double knife edge door for access. Also, the room is fed electrical EUT power via permanently installed filters and is provided with a portable video surveillance camera.

Test Location D) Ground Reference Plane # 1 (VCCI - C-742, NVLAP - 200246-0)

Horizontal floor ground reference plane constructed of double sided galvanized sheet steel supported by 19 mm particle board and measures 3.6 by 3.0 m. It is located and bonded next to one vertical wall of the Control Room and is, therefore, provided with a 3.0 by 3.6 m vertical ground reference plane constructed of the same material. Power filters and LISNs, when required, are placed on top of and bonded to the horizontal floor ground reference plane.

Test Location E) Ground Reference Plane # 2 (VCCI - C-743, NVLAP - 200246-0)

Horizontal floor ground reference plane constructed of double sided galvanized sheet steel supported by 19 mm particle board and measures 4.3 by 5.2 m. It is located and bonded next to one vertical wall of the RFD Shielded Room and is, therefore, provided with a 4.3 by 2.8 m vertical ground reference plane constructed of the same material. Power filters and LISNs, when required, are placed on top of and bonded to the horizontal floor ground reference plane.

Test Location F) Ground Reference Plane # 3

Horizontal floor ground reference plane constructed of galvanized sheet steel measuring 3.0 by 3.6 m x 2.5 mm thick.

Test Location G) Ground Reference Plane # 4 (Automotive)

Horizontal floor ground reference plane constructed of double-sided galvanized sheet steel supported by 19 mm particle board and measures 3.6 by 3.0 m.

Test Location I) Harmonic Current Test Area - Located in front of Standard Source Impedance Power Supply.

Test Location J) Magnetic Field Ground Reference Plane

Horizontal floor ground reference plane constructed of 1.5 mm thick aluminum measuring 3.6 by 2.4 m.

Test Location P) Ground Reference Plane # 5

Horizontal floor ground reference plane constructed of double-sided galvanized sheet steel supported by 19 mm particle board and measures 3.6 by 3.0 m.

Test Location R) Ground Reference Plane # 6

Ground reference plane constructed of galvanized sheet steel measuring 3.0 m x 3.6 m x 2.5 mm thick. CDNs, when required, are placed on top of and bonded to the horizontal floor ground reference plane.

Test Location Q) CISPR 12 Outdoor Site

30 meter diameter non-reflective area located behind the UL-RTP EMC Lab. Test area is used for CISPR 12 testing.

Test Location X) Other - As described in the Comments Section of Test Results.

EUT Information:

Equipment Used During Test:

Use*	Product Type	Manufacturer	Model	Comments
EUT	Transmitter	Hunter Fan Co.	W63	Model Tested.
EUT	Transmitter	Hunter Fan Co.	W62	Model Electrically identical to W63. Model W62 or W63 is selected by jumper at time of manufacturer. Operates 1 lamp only.

* Use = EUT - Equipment Under Test, ACC - Accessory (Not Subjected to Test), or SIM - Simulator (Not Subjected to Test)

Part Numbers:

These devices may be sold under the following product part numbers:

W62: 1-light OEM Transmitter - 7801910

W62: 1-light Spare Part Transmitter - 7854220

W63: 2-light OEM Transmitter - 7801920

W63: 2-light Spare Part Transmitter - 7854230

Input/Output Ports:

Port #	Name	Type*	Cable Max. >3m	Cable Shielded	Comments

End Orientation

Test 1: Radiated Disturbance Emissions - 30 MHz to 1000 MHz

Test Requirement: 47 CFR Part 15, Subpart C
Canada RSS 210, Issue 5, Amendment

Test Specification: 47 CFR Part 15, Subpart C, Section 15.209 and 15.231
Canada RSS 210, Issue 5, Amendment, Section 6.1.1(e) and 6.2.2(t1)

Test Procedure:

The test was performed in accordance with the Test Requirement and Specification and configured as noted in the Test Setup. The EUT was placed inside the anechoic chamber with a fresh battery installed. A peak measurement was first made by scanning the entire test frequency range and maximizing the EUT emissions by rotating the EUT and raising the antenna height from 1 to 4 meters above the ground reference plane. Then, a measurement was taken for all peak emissions to verify each were below the Test Limits.

Radiated Disturbance Limits for Manually Operated Transmitters
FCC Part 15 Section 15.231 and RSS-210 Section 6.1.1(e)
at a measurement distance of 3 meters

Frequency Range (MHz)	Field Strength of Fundamental		Field Strength of Fundamental	
	($\mu\text{V/m}$)	(dB $\mu\text{V/m}$)	(MHz)	($\mu\text{V/m}$)
40.66 to 40.70	2250	67.04	225	47.04
70 to 130	1250	61.94	125	41.94
130 to 174	1250 to 3750	61.94 to 71.48	125 to 375	41.94 to 51.48
174 to 260	3750	71.48	375	51.48
260 to 470	3750 to 12,500	71.48 to 81.93	375 to 1250	51.48 to 61.93
above 470	12,500	81.93	1250	61.93

Test Clarifications (Specific Limits for this transmit frequency):

At fundamental frequency, 303.5 MHz, Average field strength limit = 5562 $\mu\text{V/m}$ (74.9 dB $\mu\text{V/m}$).
Harmonic field strength limit = 556.2 $\mu\text{V/m}$ (54.9 dB $\mu\text{V/m}$).
Per 15.35(b) peak limit is 20 dB above average limit for each frequency.
Average is calculated by applied peak-to-average ratio from Test 3 of 10.2 dB to each peak measurement.

Test Deviations:

None

Test Setup: Only the following ports were tested. See EUT Information for details.

Test Item	Port #	Port Name	EUT Operation Mode	EUT Configuration	Power Interface
A	0	Enclosure	1	1 (Flat Orientation)	1
B	0	Enclosure	1	2 (Side Orientation)	1
C	0	Enclosure	1	3 (End Orientation)	1

Test 1 - Results: Radiated Disturbance Emissions - 30 MHz to 1000 MHz

Test Results Summary:

Test Item	Test Location	Humidity (%)	Temperature (°C)	Pressure (kPa)	Pass/Fail (P/F)	Date Completed	Comment #
A	A	41	23.5	100.6	P	11/21/03	
B	A	41	23.5	100.6	P	11/21/03	1
C	A	41	23.5	100.6	P	11/21/03	1

The EUT was considered to **Pass** the Requirements.

Comments:

Comment #	Description
1	Only the flat orientation was tested below 200 MHz. No significant emissions were observed in this range.

* P = Peak, Q = Quasi-Peak, A = Average.

** The Specified Limit is for the type measurement indicated. When Peak data is indicated, the tightest limit applicable is indicated.

*** # = See Comment Number Under This Test's Comments Section.

Sample Calculation: Corrected Value = Measured Value + Equip Correction

Sample Calculation: Equip Correction = Antenna Factor (dB/m) + Cable Loss (dB) - Amplifier Gain (dB, if used)

Comments:

Comment #	Description
2	Highest Transmit Frequency was found in flat orientation. Measured field strength was 74.7 dBuV/m (or 5432 uV/m in linear units).
3	Highest Spurious Emissions was found at 910.5 MHz in "side" orientation. Measured field strength was 49.1 dBuV/m (or 285 uV/m in linear units).

Test 3: Radiated Disturbance Emissions - Peak-to-Average Ratio

Test Requirement: 47 CFR Part 15, Subpart C
Canada RSS 210, Issue 5, Amendment

Test Specification: 47 CFR Part 15, Subpart C, Section 15.231
Canada RSS 210, Issue 5, Amendment, Section 6.1.1(e)

Test Procedure:

The test was performed in accordance with the Test Requirement and Specification and configured as noted in the Test Setup. The EUT was placed inside the anechoic chamber on connected to the proper power supply source. A peak measurement was first made by scanning the entire test frequency range and maximizing the EUT emissions by rotating the EUT and raising the antenna height from 1 to 4 meters above the ground reference plane.

The measurement spectrum analyzer is centered on the EUT's transmit frequency and span is reduced to 0 Hz to obtain a time domain measurement. The period of one complete transmit cycle is recorded. Next each button on the transmitter is depressed in sequence to determine which button produces the largest duty cycle. The duration of each pulse in the cycle is recorded and the percentage of time the EUT is transmitting is calculated.

No limit is expressed in Section 15.231 for this test, however the result of this test is used to calculate average values for the remaining measurements.

Test Deviations:

None

Test Setup: Only the following ports were tested. See EUT Information for details.

Test Item	Port #	Port Name	EUT Operation Mode	EUT Configuration	Power Interface
A	0	Enclosure	1	1	1

Test 3 - Results: Radiated Disturbance Emissions - Peak-to-Average Ratio

Test Results Summary:

Test Item	Test Location	Humidity (%)	Temperature (°C)	Pressure (kPa)	Pass/Fail (P/F)	Date Completed	Comment #
A	A	39	23.5	100.1	P	11/24/03	

The EUT was considered to **Pass** the Requirements.

Test Equipment Used:

Equipment ID	Description	Manufacturer	Model Number	Last Cal.	Next Cal.
SAR002	Spectrum Analyzer / Receiver	Hewlett-Packard	8566B	12/2/03	12/31/04
HI0034	Environmental Indicator	Cole-Palmer	99760-00	10/17/03	10/31/04

The above equipment has been calibrated and is within the manufacturer's published limit of error. Calibration is traceable to the National Institute of Standards & Technology(NIST) and conforms to ANSI/NC SL Z540-1-1994.

Test 3, Duration - One Cycle:

Radiated Disturbance Emissions – Peak-to-Average Ratio

One complete cycle is 28.00 ms.

Test 3, Duration - Short Pulse:

Radiated Disturbance Emissions – Peak-to-Average Ratio

One short transmission is 340 μ s. Note: Plotter does not print symbol ' μ '.

Test 3, Duration - Long Pulse:

Radiated Disturbance Emissions – Peak-to-Average Ratio

One long transmission is 660 μ s. Note: Plotter does not print symbol ' μ '.

Test 3, All Items - Discrete Data: Radiated Disturbance Emissions - Peak-to-Average Ratio

Test Item (A-Z)	Name of Pulse (short, long, header, etc)	Number of Pulses (#)	Duration of Each Pulse (ms)	Total ON Time for Pulse Type (Number x duration)	See Comment (#)***
A	Short	8	0.34	2.72	
A	Long	9	0.66	5.94	
			Total ON Time per period (ms)	8.66	
			Total Cycle Time (ms)	28.0	
			Duty Cycle (fraction)	0.309	
			Duty Cycle (dB)	-10.2	

* Or 100 milliseconds, whichever is less

** Peak-to-Average Ratio = $20 * \log(\text{Duty Cycle})$

*** # = See Comment Number Under The Preceeding Test Comments Section.

Test 4: Radiated Disturbance Emissions - Occupied Bandwidth

Test Requirement: 47 CFR Part 15, Subpart C
Canada RSS 210, Issue 5, Amendment

Test Specification: 47 CFR Part 15, Subpart C, Section 15.231
Canada RSS 210, Issue 5, Amendment, Section 6.1.1(e)

Test Procedure:

This testing was performed as a benchtop measurement. A calibrated spectrum analyzer was equipment with a rod or handheld loop antenna to capture the signal. A conducted measurement cannot be performed because the antenna is not detachable.

FCC

The spectrum analyzer Resolution Bandwidth is set to 3% to 5% of the required bandwidth. The spectrum analyzer video bandwidth is set to approximately 10 times the resolution bandwidth. A plot of the spectrum analyzer display screen is produced with marker points displaying the center frequency and the left and right side points that are 20 dB below the field strength at the center frequency.

Canada

The spectrum analyzer Resolution Bandwidth is then set to 1% to 3% of the actual bandwidth. The spectrum analyzer video bandwidth is set to approximately 10 times the resolution bandwidth. A plot of the spectrum analyzer display screen is produced with marker points displaying the center frequency and the left and right side points that are 20 dB below the original peak power center frequency.

Occupied Bandwidth Limit - Manually Operated Transmitter FCC Section 15.231
and Canada RSS-210 Section 6.1.1(e)

Transmit Frequency (MHz)	Bandwidth Limit (% of fundamental)
70 to 900	.25%
Above 900	.50%

Test Deviations:

None

Test Setup: Only the following ports were tested. See EUT Information for details.

Test Item	Port #	Port Name	EUT Operation Mode	EUT Configuration	Power Interface
A	0	Enclosure	1	1	1

Test 4 - Results: Radiated Disturbance Emissions - Occupied Bandwidth

Test 5: Radiated Disturbance Emissions – Holdover Time

Test Requirement: 47 CFR Part 15, Subpart C
Canada RSS 210, Issue 5, Amendment

Test Specification: 47 CFR Part 15, Subpart C, Section 15.231
Canada RSS 210, Issue 5, Amendment, Section 6.1.1(e)

Test Procedure:

This testing was performed as a benchtop measurement. A calibrated spectrum analyzer was equipment with a rod or handheld loop antenna to capture the signal. A conducted measurement cannot be performed because the antenna is not detachable.

The spectrum analyzer Frequency Span is set to zero. The spectrum analyzer Resolution and Video bandwidths are set to easily view the on/off transitions. The sweep time is set appropriate for the durations recorded.

Occupied Bandwidth Limit - Manually Operated Transmitter FCC Section 15.231
and Canada RSS-210 Section 6.1.1(e)

Transmission Type (Description)	Maximum Transmission Time (seconds)
Manually activated Transmission	5 (after releasing button)
Automatically activated Transmission	5

Test Deviations:

None

Test Setup: Only the following ports were tested. See EUT Information for details.

Test Item	Port #	Port Name	EUT Operation Mode	EUT Configuration	Power Interface
A	0	Enclosure	1	1	1

Test 5 - Results: Radiated Disturbance Emissions – Holdover Time

Test Results Summary:

Test Item	Test Location	Humidity (%)	Temperature (°C)	Pressure (kPa)	Pass/Fail (P/F)	Date Completed	Comment #
A	A	34	23	100	P	2/2/05	1 - 3

The EUT was considered to **Pass** the Requirements.

Comments:

Comment #	Description
1	Holdover time of manually activated transmission of “Safe Exit” mode is 5.000 second. This complies with the limit of 5 seconds in 15.231(a)(1) and RSS-210 Section 6.1.1.
2	Transmission time of automatically activated transmission of “Safe Exit” mode is 4.900 seconds. This complies with the limit of 5 seconds in 15.231(a)(2) and RSS-210 Section 6.1.1.
3	All other buttons cease transmission at 880 ms or less after depressing button. Worst-case transmission time plot is presented

Test Equipment Used:

Equipment ID	Description	Manufacturer	Model Number	Last Cal.	Next Cal.
HI0034	Environmental Indicator	Cole-Palmer	99760-00	10/14/04	10/31/05
SAR001	Spectrum Analyzer / Receiver	Hewlett-Packard	8572A	2/2/04	2/28/05

The above equipment has been calibrated and is within the manufacturer's published limit of error. Calibration is traceable to the National Institute of Standards & Technology(NIST) and conforms to ANSI/NC SL Z540-1-1994.

Test 5, Holdover Time:

Holdover Time – Safe Exit Mode

Manually Activated Transmission per 15.231(a)(1):

Automatically Activated Transmission per 15.231(a)(2):

Test 5, Holdover Time (Other Buttons):

Note for all button transmissions other than "Safe Exit" mode. Begin of transmission coincides with button press (left marker on plot). Transmission time is independent of the duration of time that the button is held down. All buttons were examined. Longest transmission holdover time measured is presented below.

Light Button = 880 ms.

Test 6: Radiated Disturbance Emissions - Restricted Bands

Test Requirement: 47 CFR Part 15, Subpart C
Canada RSS 210, Issue 5, Amendment

Test Specification: 47 CFR Part 15, Subpart C, Section 15.205
Canada RSS 210, Issue 5, Amendment, Section 6.2.2(t1)

Test Procedure:

The EUT is verified to produce only spurious emissions in the bands listed below. Where spurious emissions exist they must comply with the general limits from 47 CFR Part 15, Section 15.209.

Results from measurements are examined to ensure that no spurious emission in a restricted band (below) exceeds the general limits in Section 15.209. The restricted bands from Section 15.205 are:

MHz	MHz	MHz	GHz
0.090 - 0.110	16.42 - 16.423	608 - 614	4.5 - 5.15
0.495 - 0.505	16.69475 - 16.69525	960 - 1240	5.35 - 5.46
2.1735 - 2.1905	16.80425 - 16.80475	1300 - 1427	7.25 - 7.75
4.125 - 4.128	25.5 - 25.67	1435 - 1626.5	8.025 - 8.5
4.17725 - 4.17775	37.5 - 38.25	1645.5 - 1646.5	9.0 - 9.2
4.20725 - 4.20775	73 - 74.6	1660 - 1710	9.3 - 9.5
6.215 - 6.218	74.8 - 75.2	1718.8 - 1722.2	10.6 - 12.7
6.26775 - 6.26825	108 - 121.94	2200 - 2300	13.25 - 13.4
6.31175 - 6.31225	123 - 138	2310 - 2390	14.47 - 14.5
8.291 - 8.294	149.9 - 150.05	2483.5 - 2500	15.35 - 16.2
8.362 - 8.366	156.52475 - 156.52525	2655 - 2900	17.7 - 21.4
8.37625 - 8.38675	156.7 - 156.9	3260 - 3267	22.01 - 23.12
8.41425 - 8.41475	162.0125 - 167.17	3332 - 3339	23.6 - 24.0
12.29 - 12.293	127.72 - 167.17	3345.8 - 3358	31.2 - 31.8
12.51975 - 12.52025	240 - 285	3600 - 4400	36.43 - 36.5
12.57675 - 12.57725	332-335.4		Above 38.6
13.36 - 13.41	399.9 - 410		

All spurious emissions, including harmonics falling within restricted bands were observed to meet the general limits of 15.209.

Test Results Summary:

From Test 1 and Test 2 results, this device meets the general limits for all spurious emissions within restricted bands. The transmit frequency, 303.5 MHz, does not fall within a restricted band.

Measurement Uncertainty Statement

Test	Expanded Estimate of Uncertainty (k = 2, for 95% of a normal distribution)	Units
Radiated Disturbance Emissions: • 3 and 10 meter measurement distances • 1 meter measurement distance	+/- 3.8 dB +/- 2.3 dB	Volts/meter Volts/meter
Conducted Disturbance Emissions (9 kHz – 30 MHz):	+/- 3.4 dB	Volts
Electrostatic Discharge	+/- 2.2 %	Volts
Radiated RF Immunity (Chamber):	+/- 2.7 dB	Volts/meter
Electrical Fast Transients/Bursts Immunity	+/- 4.6 %	Volts
Surge Immunity	+/- 4.6 %	Volts
Conducted RF Immunity	+/- 2.8 dB	Volts
Power Frequency Magnetic Field Immunity	+/-13.6 %	Amps/meter
Voltage Dips and Short Interrupts	+/-4.2 %	Volts
Radiated RF Immunity (Tri-plate)	+/-3.2 %	Volts/meter
Disturbance Power (30 – 300 MHz)	+/-3.5%	Volts

CISPR 16-4:2000 Statement

The UL-RTP estimate of expanded measurement uncertainty listed above for Conducted Disturbance (+/- 3.4 dB), Disturbance Power (+/- 3.5 dB), and Radiated Disturbance (+/-3.8 dB) are less than the Values of U_{CISPR} as listed in Table 1 of CISPR 16-4. Therefore:

- Compliance is deemed to occur if no measured disturbance reported exceeds the disturbance limits.
- Non-compliance is deemed to occur if any measured disturbance reported exceeds the disturbance limits.
