Re: FCC ID: H4JAMP-4-150

To Whom It May Concern:

We are submitting an application for Class II Permissive Change for our Model AMP-4-150-30-00, FCC ID: H4JAMP-4-150

The hardware design of this product has been updated to replace the primary gain stage transistor with a comparable component that is more robust against electrostatic discharge. This change does not alter the operation, circuit functions or tuning procedure for this product.

We trust that the test reports and other exhibits submitted with this application will demonstrate the ongoing compliance of this updated product with the applicable regulatory standards

Sincerely,

A handwritten signature in black ink, appearing to read 'Nathan Wren', with a stylized, flowing script.
