FAMILY CLASS II PERMISSIVE CHANGE REQUEST

Reference: **Family No.:** **VT-3/150-SN**
Models: **VT-3/140-SN, VT-3/160-SN**

Attached, please find supporting documentation for a **Class II Permissive Change Family Filing** on the **VT-3/150-SN Family of VHF Transmitters**, operating in the 132-174 MHz frequency band of the Land Mobile Services in accordance with 47 CFR§ Parts 22, 80 and 90. This Class II Permissive Change is for the addition of an emission designator, 9K2F1D, as well as for an extension of the lowest permissible output power to 0.5W from the previous 2W limit (ie – Note BG shall change to BC). There have been no modifications to the transmitter either externally or internally and as such only the test report showing the relative emission mask has been included as an exhibit along with this cover letter. All previous exhibits submitted with the original application still pertain to this equipment. The cover letter submitted on September 14, 2005 is to be superseded by this cover letter dated September 21, 2005. There should be a change made to Item 8, Section I in Form 731 of the Class II Permissive Change application submitted around September 14, 2005. This Item was incorrectly marked as 'Yes' for requesting confidentiality on a portion of the data submitted. This should have been marked as 'No'. Kindly make this change on behalf of Daniels Electronics Ltd leaving the remainder of the application 'as is'.
