

TRX743 Operational Description

The 2 way pager is a very low-powered remote control/ monitoring device used in motoring the automobile security status as well as in remotely arming/disarming car security system and audible peeping warning sound during alert mode. Its features and functions are described in the attached pager.

The transmission is powered by a 3v cr2450 battery and works on 433.92 MHz single fixed frequency. Details of circuit diagram and block diagram are shown on the attached sheets.

There are total 4 buttons , which if pressed will produce the digital control signals and modulate the carrier signal. The carrier signal is generated by a crystal oscillator/ amplifier circuit composed of a 433.92 MHz crystal and a npn transmitter. The modulated output of RF amplifier stage is coupled to the coil.

All the tuning and verification are done by manufacturer during the production process and no adjustment is allowed by any consumer. No external ground is needed in such device.

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions:-

- (1) This device may not cause harmful interference.
- (2) This device must accept any interference received: including interference that may cause undesired operation.

Note: The manufacturer is not responsible for any radio or TV interference caused by unauthorized modification to this equipment. Such modification could void the user's authority to operate the equipment.
