Dear Helen,

Question #1: There is no agent authorization letter in the filing. Please always submit an Agent authorization letter if you represent your client to deal with FCC certification.

---> Attached please find POA.pdf!

Question #2: Please explain why radiated spurious reading (54.20dBuV/m) is over the highest fundamental field strength reading(53.03dBuV/m), which is not allowed.

---> Sorry about that! we re-tested it and revised the test report! Attached please find 50531221-RP1.pdf!

Best Regards,

Naomi Zhang
