

## §15.247(b) Maximum Peak Output Power

---

Minimum Standard – The maximum peak output power of the transmitter shall not exceed 1 watt. These are radiated measurements.

Note: Measurements taken with Peak Power Meter

| FREQUENCY<br>(MHz) | Channel | Power Output<br>Radiated<br>EIRP (dBm) |
|--------------------|---------|----------------------------------------|
| 2412               | 01      | 12.67                                  |
| 2437               | 06      | 13.37                                  |
| 2462               | 11      | 13.57                                  |
