Re: FCC ID H9PLA2400 Ref # 13402

Date: April 12, 2000

Dear Reviewer,

In response to the following Email:

To: Norman Nelson, Symbol Technologies, Inc.
From: Joe Dichoso
jdichoso@fcc.gov
FCC Application Processing Branch

Re: FCC ID H9PLA2400
Applicant: Symbol Technologies Inc
Correspondence Reference Number: 13402
731 Confirmation Number: EA96849
Date of Original E-Mail: 04/11/2000

The test report indicates 5 antennas. The RF exposure info indicates 8 antennas. Only pictures of 6 antennas were submitted. Provide a correct list of antennas. For each antenna, list the type and model number and the gain. Correct the type, model number and gain in the test report, the RF exposure, antenna list. Some of the gains, model number and pictures did not agree. Please check everything.

The 9th column of the Antenna Summary table shows the TR Status (Test Report) that two antennas were withdrawn. That's why there are only 6 pictured. (8 – 2 = 6) Note that antenna number 7 says see Ant #2. I did this since per a previous email you stated that only the highest gain antenna of each type needed to be tested. Since Antenna #2 is the same type and gain as #7 I refer you to #2 for the test data of #7. I have also included with this response another antenna #9 which is listed in the corrected Antenna Summary Table and in the same way refers to Ant #2. The #9 antenna description is included in this response.

The summary table is generated from a database that has the antenna gain, cable length, type of cable and its loss characteristics. I have corrected the gain of #3 in my database to match its data sheet and attached a corrected summary table.

Since I am using a database to keep track of antennas the TR status is a way to remove an antenna from consideration by marking it withdrawn rather than deleting it from the database. I hope this is acceptable.

The correct number of desired antennas in this application is $7 = 5 + 2$:

Number tested	5
Number tested withdrawn	0
Number in table withdrawn	2
Number referenced to others	2
Total in table	9

I have included the corrected page from the test report.

I hope these answers are satisfactory.

Respectfully,

Norman H. Nelson

Antenna Gain listed without cable

TR Status refers to whether the antenna was tested. If not refer to the directed antenna test data

3140F Antenna

The **3140F** antenna is 0 dBi omni-directional in azimuth plane. It is mounted internally on the top end of the terminal on the back side as shown in the attached photo. The **3140F** is a replacement for the 3140. The **3140F** uses a Murata Erie BFA connector. In its use it would be within 20 cm of a persons hand but more than 20 cm from the users body. It is used in portable devices. The following RF exposure information is included in a prominent place in the device's user manual to inform the user of safety issues as required by OET Bulletin 65, Supplement C for EIRP greater than 200 mW.

<i>Location</i>	Hand Held Device
<i>Pattern</i>	Omni
<i>Type</i>	F-Element
<i>Gain</i>	0 dBi
<i>Physical</i>	See attached dwg
<i>Cable</i>	MXYPH75
<i>Symbol P/N</i>	10-38653-01

“Important Note: To comply with FCC RF exposure requirements, this hand-held device is approved for operation in a user’s hand when there is 20 cm or more between the antenna and the user’s body.”
