

Note to FCC reviewer.

Dear Sir,

When I completed the second part of the 731 form for this RLAN Class 2 Permissive Change filing I noticed that I had been reading the wrong information and so the figures that I entered for the frequency and conducted power were incorrect. Unfortunately I cannot correct this once I have filed the information.

Please note the correct information should have been:

Frequency range: 2412.0 – 2462.0 MHz at a conducted power of 0.016 Watts. This is consistent with the original Grant.

I hope that you will be able to correct this for me. I am sorry for my error.

Please contact me if you have any queries.

Yours sincerely,

Alan Binks
