

RF MEASUREMENT REPORT

FCC ID: HD5-EDA61K1
Applicant: Honeywell International Inc
Product: Mobile computer
Model No.: EDA61K-1
Brand Name: Honeywell
FCC Rule(s): Part 2, 24 (E) Section 24.232(c) & 24.238(a)
Result: Complies
Received Date: 2024-11-18
Test Date: 2024-11-21 ~ 2024-11-25

The test results relate only to the samples tested.

This equipment has been shown to be capable of compliance with the applicable technical standards as indicated in the measurement report and was tested in accordance with the measurement procedures specified in ANSI C63.26-2015. Test results reported herein relate only to the item(s) tested.

The test report shall not be reproduced except in full without the written approval of MRT Technology (Suzhou) Co., Ltd.

Note: This report is based on the original MRT report (report No.: 2010RSU078-U6) to do the following modifications:

1. WCDMA BII duplexer in Pin-to-Pin change, Transmitter output power, Transmitter unwanted emissions (band-edge) and Radiated Spurious Emissions in the worst-case mode are evaluated.
2. Update applicant and manufacturer's name.

1.4. Product Information

Product Name	Mobile computer
Model No.	EDA61K-1
Brand Name	Honeywell
IMEI	990013864528661(Conducted) 990013864528703(Radiated)
Wi-Fi Specification	802.11a/b/g/n/ac
Bluetooth Specification	v4.1 Dual mode
NFC	13.56MHz
GNSS Specification	GPS/GLONASS/BDS
3GPP Specification	GSM 900/1800 WCDMA Band II/IV/V CDMA200 Band BC0/BC1 LTE Band 2/4/5/7/12/13/17/25/38/41
Antenna Specification	Refer to Section 1.6
Accessory	
Rechargeable Li-ion Battery	Model No.: CK65-BTSC Nominal Capacity: 7000mAh/25.2Wh Nominal Voltage: 3.6V
Remark: The information of EUT was provided by the manufacturer, and the accuracy of the information shall be the responsibility of the manufacturer.	

1.5. Radio Specification under Testing

UMTS Specification	
TX Frequency Range:	WCDMA Band II: 1850 ~ 1910MHz
RX Frequency Range:	WCDMA Band II: 1930 ~ 1990MHz
Support Power Class	PC3
Modulation	BPSK, QPSK

1.6. Description of Available Antennas

Technology	Frequency Range (MHz)	Antenna Type	Max Peak Gain (dBi)
WCDMA Band II	1850 ~ 1910	FPC	-0.59
Note 1: All antenna information (Antenna type and Peak Gain) is provided by the manufacturer.			
Note 2: The typical antenna used to calculate the ERP (EIRP).			

1.7. Test Methodology

According to the specifications of the manufacturer, the EUT must comply with the requirements of the following standards:

- ANSI C63.26:2015
- FCC CFR 47 Part 2, Part 24
- FCC KDB 971168 D01 v03r01: Power Meas License Digital Systems
- FCC KDB 971168 D02 v02r01: Misc Rev Approv License Devices
- FCC KDB 412172 D01 v01r01: Determining ERP and EIRP

4. Decision Rules and Measurement Uncertainty

4.1. Decision Rules

The Decision Rule is based on Simple Acceptance in accordance with ISO Guide 98-4: 2012 Clause 8.2.
(Measurement uncertainty is not taken into account when stating conformity with a specified requirement.)

4.2. Measurement Uncertainty

Where relevant, the following test uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2. This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of $k = 2$.

Radiated Spurious Emissions	
Measurement Uncertainty for a Level of Confidence of 95% ($U=2U_c(y)$):	
Coaxial:	9kHz~30MHz: 2.35dB
Coplanar:	9kHz~30MHz: 2.37dB
Horizontal:	30MHz~200MHz: 3.46dB
	200MHz~1GHz: 3.78dB
	1GHz~40GHz: 4.97dB
Vertical:	30MHz~200MHz: 4.07dB
	200MHz~1GHz: 5.28dB
	1GHz~40GHz: 4.78dB
Transmitter Output Power	
Measuring Uncertainty for a Level of Confidence of 95% ($U=2U_c(y)$):	
0.66dB	

5. Test Result

5.1. Summary

FCC Part Section(s)	Test Description	Test Condition	Test Result
24.232(c)	Transmitter Output Power	Conducted	Pass
2.1051, 24.238(a)	Transmitter unwanted emissions (band-edge)		Pass
2.1053, 24.238(a)	Transmitter Spurious Emissions	Radiated	Pass

Notes:

- 1) The analyzer plots shown in this section were all taken with a correction table loaded into the analyzer. The correction table was used to account for the losses of the cables and attenuators used as part of the system to connect the EUT to the analyzer at all frequencies of interest.
- 2) All supported modulation types were evaluated. The worst-case emission of modulation was selected. The power of HSDPA/HSUPA is lower than that of WCDMA. Therefore, the Transmitter unwanted emissions (band-edge), Transmitter Spurious Emissions were presented worst-case in the test report.
- 3) For radiated emission tests, every axis (X, Y, Z) was also verified. The test results shown in the following sections represent the worst-case emissions.

5.2. Transmitter Output Power Measurement

5.2.1. Test Limit

WCDMA Band II:

Mobile and portable stations are limited to 2 watts EIRP and the equipment must employ a means for limiting power to the minimum necessary for successful communications.

5.2.2. Test Procedure

ANSI C63.26-2015 - Section 5.2.4.2

5.2.3. Test Setting

Average power measurements were performed only when the EUT was transmitting at its maximum power control level using a broadband power meter with a pulse sensor. The power meter implemented triggering and gating capabilities which were set up such that power measurements were recorded only during the ON time of the transmitter.

The relevant equation for determining the maximum ERP or EIRP from the measured RF output power is given in Equation (1) as follows:

$$\text{ERP or EIRP} = P_{\text{Meas}} + G_T$$

where

ERP or EIRP effective radiated power or equivalent isotropically radiated power, respectively (expressed in the same units as P_{Meas} , e.g., dBm or dBW)

P_{Meas} measured transmitter output power or PSD, in dBm or dBW

G_T gain of the transmitting antenna, in dBd (ERP) or dBi (EIRP)

$$\text{ERP} = \text{EIRP} - 2.15$$

5.2.4. Test Setup

5.2.5. Test Result

Refer to Appendix A.1.

5.3. Transmitter unwanted emissions (band-edge) Measurement

5.3.1. Test Limit

24.238 (a)

For operations in the 1850 ~ 1910 MHz, the FCC limit is $43 + 10\log_{10}(P_{\text{[Watts]}})$ dB below the transmitter power $P(\text{Watts})$ in a 1 MHz bandwidth. However, in the 1MHz bands immediately outside and adjacent to the licensee's frequency block, a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed.

5.3.2. Test Procedure

ANSI C63.26-2015 - Section 5.7

5.3.3. Test Setting

1. Set the analyzer frequency to Low or High channel
2. RBW = specified resolution bandwidth, for improvement of the accuracy in the measurement of the average power of a noise-like emission, a RBW narrower than the specified reference bandwidth can be used (generally limited to no less than 1% of the frequency block group, provided that a subsequent integration is performed over the full required measurement bandwidth. This integration should be performed using the spectrum analyzer's band power functions.
3. $VBW \geq 3 \cdot RBW$
4. Sweep time = auto
5. Detector = power averaging (rms)
6. If the EUT can be configured to transmit continuously, then set the trigger to free run
7. If the EUT cannot be configured to transmit continuously, then use a sweep trigger with the level set to enable triggering only on full power bursts and configure the EUT to transmit at full power for the entire duration of each sweep. Verify that the sweep time is less than or equal to the transmission burst duration. Time gating can also be used under similar constraints
8. Trace average at least 100 traces in power averaging (rms) mode if sweep is set to auto-couple. To accurately determine the average power over the on and off time of the transmitter, it can be necessary to increase the number of traces to be averaged above 100, or if using a manually configured sweep time, increase the sweep time.
9. Compute the power by integrating the spectrum across the specified resolution bandwidth using the instrument's band or channel power measurement function, with the band/channel limits set equal to the

specified resolution bandwidth, when using a measurement bandwidth smaller than the specified bandwidth. Otherwise, Use the peak marker function to determine the maximum amplitude level.

5.3.4. Test Setup

5.3.5. Test Result

Refer to Appendix A.2.

5.4. Radiated Spurious Emissions Measurement

5.4.1. Test Limit

The power of any emission outside of the authorized operating frequency ranges must be attenuated below the transmitting power (P) by a factor of at least $43 + 10 \log(P)$ dB. The emission limit equal to -13dBm.

$E \text{ (dB}\mu\text{V/m)} = \text{EIRP (dBm)} - 20 \log D + 104.8$; where D is the measurement distance in meters. The emission limit equal to 82.3dB μ V/m.

5.4.2. Test Procedure

ANSI C63.26-2015 - Section 5.2.7 & 5.5

5.4.3. Test Setting

1. RBW = 120kHz or 1MHz
2. VBW $\geq 3 \times$ RBW
3. Sweep time $\geq 10 \times$ (number of points in sweep) $\times$ (transmission symbol period)
4. Detector = CISPR quasi-peak / average detector (Below 1 GHz, compliance with the limits shall be demonstrated using a CISPR quasi-peak detector and the related measurement bandwidth. Above 1 GHz, compliance with the limits shall be demonstrated using a linear average detector with a minimum resolution bandwidth of 1 MHz.)
5. The trace was allowed to stabilize

5.4.4. Test Setup

Below 1GHz Test Setup:

Above 1GHz Test Setup:

5.4.5. Test Result

Refer to Appendix A.3.

	5	23.04	23.26	23.18	-0.59	22.45	22.67	22.59
Limit	33.01dBm							
Note: The EIRP (dBm) = Output Power (dBm) + Antenna Gain (dBi)								

A.2 Transmitter unwanted emissions (band-edge) Test Result

Test Site	WZ-SR6	Test Engineer	Edith Yu
Test Date	2024-11-22	Test Band	WCDMA Band II

A.3 Radiated Spurious Emissions Test Result

Test Site	WZ-AC2	Test Engineer	Lucas Wang
Test Date	2024-11-25	Test Band	WCDMA Band II

Frequency (MHz)	Reading Level (dBμV)	Factor (dB/m)	Measure Level (dBμV/m)	Limit (dBμV/m)	Margin (dB)	Detector	Polarization
46.878	1.1	20.4	21.5	82.3	-60.8	Quasi-Peak	Horizontal
624.028	-6.4	27.4	21.0	82.3	-61.3	Quasi-Peak	Horizontal
48.624	10.7	20.5	31.2	82.3	-51.1	Quasi-Peak	Vertical
114.681	14.6	17.6	32.2	82.3	-50.1	Quasi-Peak	Vertical
3759.100	51.8	-0.9	50.9	82.3	-31.4	Peak	Horizontal
5642.700	45.7	3.7	49.4	82.3	-32.9	Peak	Horizontal
3762.500	50.1	-0.9	49.2	82.3	-33.1	Peak	Vertical
5642.700	39.5	3.7	43.2	82.3	-39.1	Peak	Vertical

Note1: Measure Level (dBμV/m) = Reading Level (dBμV) + Factor (dB/m)

Factor (dB/m) = Cable Loss (dB) + Antenna Factor (dB/m).

Note2: The peak-detection value will always be equal to or greater than average-detection value. In a result, the peak-detection value measured by spectrum analyzer shall represent the worst-case results.

Note 3: The amplitude of Radiated transmitter spurious emissions (Frequency range from 9kHz to 30MHz) is that proximity to ambient noise, which also are attenuated more than 20 dB below the permissible value.

Therefore, the data is not presented in the report.
