

# SAR TEST REPORT

**REPORT NO.:** SA911221H01

**MODEL NO.:** WLAN Mobile Adapter 2201

**RECEIVED:** Dec. 21, 2002

**TESTED:** Jan. 09, 2003

**APPLICANT:** Accton Technology Corporation

**ADDRESS:** No. 1, Creation Rd. III, Science-based  
Industrial Park, Hsinchu, Taiwan, R.O.C.

**ISSUED BY:** Advance Data Technology Corporation

**LAB LOCATION:** 47 14th Lin, Chiapau Tsun, Linko, Taipei,  
Taiwan, R.O.C.

This test report consists of 15 pages in total except Appendix. It may be duplicated completely for legal use with the approval of the applicant. It should not be reproduced except in full, without the written approval of our laboratory. The client should not use it to claim product endorsement by CNLA, NVLAP or any government agencies. The test results in the report only apply to the tested sample.

## 1. CERTIFICATION

**PRODUCT :** WLAN Mobile Adapter 2201  
**MODEL NO. :** WLAN Mobile Adapter 2201  
**BRAND NAME :** NORTEL NETWORKS  
**APPLICANT :** Accton Technology Corporation  
**STANDARDS :** 47 CFR Part 2 (Section 2.1093), FCC OET Bulletin 65,  
Supplement C (01-01), Canada RSS-102.

We, **Advance Data Technology Corporation**, hereby certify that one sample of the designation has been tested in our facility on 9<sup>th</sup> Jan. 2003. The test record, data evaluation and Equipment Under Test (EUT) configurations represented herein are true and accurate accounts for the measurements of the sample's EMC characteristics under the conditions herein specified.

| <b>ANTENNA TYPE</b>           | Printed Inverted-F                                                            |
| <b>PEAK SAR</b>               | 0.415W/kg                                                                     |
| <b>DATA CABLE</b>             | NA                                                                            |
| <b>I/O PORTS</b>              | PCMCIA                                                                        |
| <b>ASSOCIATED DEVICES</b>     | NA                                                                            |

**NOTE:** This test is presented for 2.4GHz transmitter only.

### 2.2 GENERAL DESCRIPTION OF APPLIED STANDARDS

According to the specifications of the manufacturer, this product must comply with the requirements of the following standards:

**FCC CFR 47 Part 2 (2.1093)**

**FCC OET Bulletin 65, Supplement C (01-01)**

**Canada RSS-102**

All tests have been performed and recorded as per the above standards.

## 2.3 GENERAL INFORMATION OF THE TEST SYSTEM

### ET3DV6 ISOTROPIC E-FIELD PROBE

## TWIN SAM V4.0

|                        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Construction</b>    | The shell corresponds to the specifications of the Specific Anthropomorphic Mannequin (SAM) phantom defined in IEEE 1528-200X, CENELEC 50361 and IEC 62209. It enables the dosimetric evaluation of left and right hand phone usage as well as body mounted usage at the flat phantom region. A cover prevents evaporation of the liquid. Reference markings on the phantom allow the complete setup of all predefined phantom positions and measurement grids by manually teaching three points with the robot. |
| <b>Shell Thickness</b> | $2 \pm 0.2\text{mm}$                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Filling Volume</b>  | Approx. 25liters                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

## 2.4 GENERAL DESCRIPTION OF THE PROBE SCAN RULE

The maximum search is automatically performed after each coarse scan measurement. It is based on splines in two or three dimensions. The procedure can find the maximum for most SAR distributions even with relatively large grid spacing. After the coarse scan measurement, the probe is automatically moved to a position at the interpolated maximum. The following scan can directly use this position for reference, e.g., for a finer resolution grid or the cube evaluations.

The 1g peak evaluations are only available for the predefined cube 5x5x7 scans. The routines are verified and optimized for the grid dimensions used in these cube measurements. The measured volume of 32x32x30mm contains about 35g of tissue. The first procedure is an extrapolation (incl. boundary correction) to get the points between the lowest measured plane and the surface. The next step uses 3D interpolation to get all points within the measured volume in a 1mm grid (35000 points). In the last step, a 1g cube is placed numerically into the volume and its averaged SAR is calculated. This cube is then moved around until the highest averaged SAR is found. If the highest SAR is found at the edge of the measured volume, the system will issue a warning: higher SAR values might be found outside of the measured volume. In that case the cube measurement can be repeated, using the new interpolated maximum as the center.

### 3. DESCRIPTION OF TEST MODES AND CONFIGURATIONS

|                                                                      |                                                                                                        |

The following test configurations have been applied in this test report:

- Mode 1 EUT of the transmitted antenna in the left side of the notebook, the bottom transmitted antenna of the notebook contact the bottom of the flat phantom with 0cm separation distance.
- Mode 2 EUT of the transmitted antenna in the left side of the notebook, the keyboard face of the notebook is perpendicular to the bottom of the flat phantom and the left side of notebook is facing the phantom. The separation distance is 1.5cm between the left side of the notebook and the bottom of the flat phantom.
- Mode 3 EUT of the transmitted antenna in the left side of the notebook, the keyboard face of the notebook is perpendicular to the bottom of the flat phantom and the left side of notebook is facing the phantom. The separation distance is 0cm between the left side of notebook and the bottom of the flat phantom.

**NOTE 1:** Please refer to “**APPENDIX A**” for the photos of test configuration.

**NOTE 2:** The output power of the un-modulated CW carrier has been adjusted to be the same with that of modulated signal.

#### 4. DESCRIPTION OF SUPPORT UNITS

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| NO. | PRODUCT  | BRAND | MODEL NO. | SERIAL NO.               | FCC ID              |
|-----|----------|-------|-----------|--------------------------|---------------------|

| NO. | SIGNAL CABLE DESCRIPTION OF THE ABOVE SUPPORT UNITS |
|-----|-----------------------------------------------------|
| 1   | NA                                                  |

## 5. TEST RESULTS

### 5.1 TEST PROCEDURES

The SAR value was calculated via the 3D spline interpolation algorithm which has been implemented in the software of DASY3 SAR measurement system manufactured and calibrated by Schmid & Partner.

A coarse scan with 20mm x 20mm grid was performed for the highest spatial SAR location. A fine scan with 32mm x 32mm x 30mm volume was performed for SAR value averaged over 1g and 10g spatial volumes.

### 5.2 MEASURED SAR RESULT

|                         | 11      | 2462                                   | 0.133                  |

**NOTE:**

1. Test configuration of each mode is described in section 3.
2. In this testing, the limit for General Population Spatial Peak averaged over 1g, **1.6 W/kg**, is applied.
- 3: Please see the Appendix for the photo of the test configuration and also the data.

### 5.3 SAR LIMITS

| HUMAN EXPOSURE                                                   | SAR (W/kg)                                               |                                                  |

| Spatial Peak<br>(hands/wrists/feet/ankles<br>averaged over 10 g) | 4.0                                                      | 20.0                                             |

### 5.4 EUT CONDUCTED POWER VARIATION

The variation of the EUT conducted power measured before and after SAR testing should not over 5%. The test procedures for conducted power level is described in FCC rule part 2.1046.

The maximum variation in this testing is listed in the following table.

| Channel | Mode | Conducted Power<br>(Before) | Conducted Power<br>(After) | Variation<br>(%) |
|---------|------|-----------------------------|----------------------------|------------------|
| 1       | 3    | 28.7mW                      | 27.8mW                     | -3.21            |

## 5.5 TISSUE

The tissue of 2450MHz for brain and body was well prepared according to the standard procedures. The required and measured dielectric parameters are listed in this table.

|                               | Brain    |          | Muscle   |          |
|-------------------------------|----------|----------|----------|----------|
|                               | Required | Measured | Required | Measured |
| Permittivity ( $\epsilon_r$ ) | 39.2±5%  | NA       | 52.7±5%  | 52.98    |
| Conductivity ( $\sigma$ )     | 1.8±5%   | NA       | 1.95±5%  | 2.00     |

The measured parameters of the used tissue.

| Tissue Prepared and Measured on 9 <sup>th</sup> Jan. 2003 |       |             |        |            |

| Min Conductivity                                          | NA    | NA          | 1.891  | 2400       |

## 5.6 TEST EQUIPMENT FOR TISSUE PROPERTY

| Item | Name             | Provider | Type   | Series No. | Calibrated Until |
|------|------------------|----------|--------|------------|------------------|
| 1    | Network Analyzer | Agilent  | 8720ES | NA         | May 6, 2003      |
| 2    | Dielectric Probe | Agilent  | 85070C | NA         | NA               |

## 6. SYSTEM VALIDATION

The system validation was performed in the flat phantom with equipment listed in the following table. Since the SAR value is calculated from the measured electric field, dielectric constant and conductivity of the body tissue, and the SAR is proportional to the square of the electric field. So, the SAR value will be also proportional to the RF power input to the system validation dipole under the same test environment. In our system validation test, 50mW RF input power was used instead of 250mW used by Schmid & Partner, then the measured SAR will be linearly extrapolated to that of 250mW RF power.

## 8. INFORMATION ON THE TESTING LABORATORIES

We, ADT Corp., were founded in 1988 to provide our best service in EMC and Safety consultation. Our laboratories are accredited and approved by the following approval agencies according to ISO/IEC 17025, Guide 25 or EN 45001:

|                    |                 |
|--------------------|-----------------|
| <b>USA</b>         | FCC, NVLAP      |
| <b>Germany</b>     | TUV Rheinland   |
| <b>Japan</b>       | VCCI            |
| <b>New Zealand</b> | MoC             |
| <b>Norway</b>      | NEMKO           |
| <b>R.O.C.</b>      | BSMI, DGT, CNLA |

Copies of accreditation certificates of our laboratories obtained from approval agencies can be downloaded from our web site:

[www.adt.com.tw/index.5/phtml](http://www.adt.com.tw/index.5/phtml).

## APPENDIX A: TEST CONFIGURATIONS AND TEST DATA

### A1: TEST CONFIGURATION

#### Mode 1

## Mode 2

## Mode 3

## EUT Photo

## A2: TEST DATA

01/09/03

### WLAN Mobile Adapter 2201 Mode 1

Separation distance : 0mm (Laptop PC to Phantom)

Air temperature : 23.5 degrees centigrade ; Liquid temperature : 22.4 degrees centigrade

SAM Phantom; Flat Section; Position: (90°,90°);

Antenna type: Internal PIFA

Probe: ET3DV6 - SN1687; ConvF(4.40,4.40,4.40); Crest factor: 1.0

Test Frequency : 2412 MHz

Liquid parameters : Body 2412 MHz  $\sigma = 1.96$  mho/m  $\epsilon_r = 53.1$   $\rho = 1.00$  g/cm<sup>3</sup>

Coarse: Dx = 20.0, Dy = 20.0, Dz = 10.0

Cube 5x5x7: SAR (1g): 0.157 mW/g, SAR (10g): 0.0880 mW/g, (Worst-case extrapolation)

Powerdrift: -0.09 dB

01/09/03

## WLAN Mobile Adapter 2201 Mode 1

Separation distance : 0mm (Laptop PC to Phantom)

Air temperature : 23.5 degrees centigrade ; Liquid temperature : 22.4 degrees centigrade

SAM Phantom; Flat Section; Position: (90°,90°);

Antenna type: Internal PIFA

Probe: ET3DV6 - SN1687; ConvF(4.40,4.40,4.40); Crest factor: 1.0

Test Frequency : 2437 MHz

Liquid parameters : Body 2437 MHz  $\sigma = 1.99$  mho/m  $\epsilon_r = 53.0$   $\rho = 1.00$  g/cm<sup>3</sup>

Coarse: Dx = 20.0, Dy = 20.0, Dz = 10.0

Cube 5x5x7: SAR (1g): 0.415 mW/g, SAR (10g): 0.235 mW/g, (Worst-case extrapolation)

Powerdrift: -0.00 dB

01/09/03

## WLAN Mobile Adapter 2201 Mode 1

Separation distance : 0mm (Laptop PC to Phantom)

Air temperature : 23.5 degrees centigrade ; Liquid temperature : 22.4 degrees centigrade

SAM Phantom; Flat Section; Position: (90°,90°);

Antenna type: Internal PIFA

Probe: ET3DV6 - SN1687; ConvF(4.40,4.40,4.40); Crest factor: 1.0

Test Frequency : 2462 MHz

Liquid parameters : Body 2462 MHz  $\sigma = 2.02$  mho/m  $\epsilon_r = 52.9$   $\rho = 1.00$  g/cm<sup>3</sup>

Coarse: Dx = 20.0, Dy = 20.0, Dz = 10.0

Cube 5x5x7: SAR (1g): 0.232 mW/g, SAR (10g): 0.130 mW/g, (Worst-case extrapolation)

Powerdrift: -0.07 dB

01/09/03

## WLAN Mobile Adapter 2201 Mode 2

Separation distance : 15mm (Laptop PC to Phantom)

Air temperature : 23.5 degrees centigrade ; Liquid temperature : 22.4 degrees centigrade

SAM Phantom; Flat Section; Position: (90°,90°);

Antenna type: Internal PIFA

Probe: ET3DV6 - SN1687; ConvF(4.40,4.40,4.40); Crest factor: 1.0

Test Frequency : 2412 MHz

Liquid parameters : Body 2412 MHz  $\sigma = 1.96$  mho/m  $\epsilon_r = 53.1$   $\rho = 1.00$  g/cm<sup>3</sup>

Coarse: Dx = 20.0, Dy = 20.0, Dz = 10.0

Cube 5x5x7: SAR (1g): 0.0364 mW/g, SAR (10g): 0.0208 mW/g, (Worst-case extrapolation)

Powerdrift: -0.07 dB

01/09/03

## WLAN Mobile Adapter 2201 Mode 2

Separation distance : 15mm (Laptop PC to Phantom)

Air temperature : 23.5 degrees centigrade ; Liquid temperature : 22.4 degrees centigrade

SAM Phantom; Flat Section; Position: (90°,90°);

Antenna type: Internal PIFA

Probe: ET3DV6 - SN1687; ConvF(4.40,4.40,4.40); Crest factor: 1.0

Test Frequency : 2437 MHz

Liquid parameters : Body 2437 MHz  $\sigma = 1.99$  mho/m  $\epsilon_r = 53.0$   $\rho = 1.00$  g/cm<sup>3</sup>

Coarse: Dx = 20.0, Dy = 20.0, Dz = 10.0

Cube 5x5x7: SAR (1g): 0.103 mW/g, SAR (10g): 0.0607 mW/g, (Worst-case extrapolation)

Powerdrift: -0.09 dB

01/09/03

## WLAN Mobile Adapter 2201 Mode 2

Separation distance : 15mm (Laptop PC to Phantom)

Air temperature : 23.5 degrees centigrade ; Liquid temperature : 22.4 degrees centigrade

SAM Phantom; Flat Section; Position: (90°,90°);

Antenna type: Internal PIFA

Probe: ET3DV6 - SN1687; ConvF(4.40,4.40,4.40); Crest factor: 1.0

Test Frequency : 2462 MHz

Liquid parameters : Body 2462 MHz  $\sigma = 2.02$  mho/m  $\epsilon_r = 52.9$   $\rho = 1.00$  g/cm<sup>3</sup>

Coarse: Dx = 20.0, Dy = 20.0, Dz = 10.0

Cube 5x5x7: SAR (1g): 0.0619 mW/g, SAR (10g): 0.0357 mW/g, (Worst-case extrapolation)

Powerdrift: 0.07 dB

01/09/03

## WLAN Mobile Adapter 2201 Mode 3

Separation distance : 0mm (Laptop PC to Phantom)

Air temperature : 23.5 degrees centigrade ; Liquid temperature : 22.4 degrees centigrade

SAM Phantom; Flat Section; Position: (90°,90°);

Antenna type: Internal PIFA

Probe: ET3DV6 - SN1687; ConvF(4.40,4.40,4.40); Crest factor: 1.0

Test Frequency : 2412 MHz

Liquid parameters : Body 2412 MHz  $\sigma = 1.96$  mho/m  $\epsilon_r = 53.1$   $\rho = 1.00$  g/cm<sup>3</sup>

Coarse: Dx = 20.0, Dy = 20.0, Dz = 10.0

#### Tests

The series production process used allows the limitation to test of first articles. Complete tests were made on the pre-series Type No. QD 000 P40 AA, Serial No. TP-1001 and on the series first article Type No. QD 000 P40 BA, Serial No. TP-1006. Certain parameters have been retested using further series units (called samples).

### Calibration Certificate

#### 2450 MHz System Validation Dipole

Type:

D2450V2

Serial Number:

716

Place of Calibration:

Zurich

Date of Calibration:

September 26, 2002

Calibration Interval:

24 months

Schmid & Partner Engineering AG hereby certifies, that this device has been calibrated on the date indicated above. The calibration was performed in accordance with specifications and procedures of Schmid & Partner Engineering AG.

Wherever applicable, the standards used in the calibration process are traceable to international standards. In all other cases the standards of the Laboratory for EMF and Microwave Electronics at the Swiss Federal Institute of Technology (ETH) in Zurich, Switzerland have been applied.

Calibrated by:

D. Vella

Approved by:

Antonio Kaya

**DASY**

**Dipole Validation Kit**

**Type: D2450V2**

**Serial: 716**

**Manufactured: September 10, 2002**  
**Calibrated: September 26, 2002**

## **1. Measurement Conditions**

The measurements were performed in the flat section of the new SAM twin phantom filled with head simulating solution of the following electrical parameters at 2450 MHz:

|                       |                   |            |
|-----------------------|-------------------|------------|
| Relative permittivity | <b>37.7</b>       | $\pm 5\%$  |
| Conductivity          | <b>1.88 mho/m</b> | $\pm 10\%$ |

The DASY System with a dosimetric E-field probe ET3DV6 (SN:1507, conversion factor 5.0 at 2450 MHz) was used for the measurements.

The dipole feedpoint was positioned below the center marking and oriented parallel to the body axis (the long side of the phantom). The standard measuring distance was 10mm from dipole center to the solution surface. The included distance holder was used during measurements for accurate distance positioning.

The coarse grid with a grid spacing of 20mm was aligned with the dipole. The 5x5x7 fine cube was chosen for cube integration. Probe isotropy errors were cancelled by measuring the SAR with normal and 90° turned probe orientations and averaging.

The dipole input power (forward power) was 250mW  $\pm 3\%$ . The results are normalized to 1W input power.

### **2.1. SAR Measurement with DASY3 System**

Standard SAR-measurements were performed according to the measurement conditions described in section 1. The results (see figure supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured with the dosimetric probe ET3DV6 SN:1507 and applying the worst-case extrapolation are:

|                                                    |                  |
|----------------------------------------------------|------------------|
| averaged over 1 cm <sup>3</sup> (1 g) of tissue:   | <b>57.2 mW/g</b> |
| averaged over 10 cm <sup>3</sup> (10 g) of tissue: | <b>26.4 mW/g</b> |

### **2.2 SAR Measurement with DASY4 System**

Standard SAR-measurements were performed according to the measurement conditions described in section 1. The results (see figure supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured with the dosimetric probe ET3DV6 SN:1507 and applying the advanced extrapolation are:

|                                                    |                  |
|----------------------------------------------------|------------------|
| averaged over 1 cm <sup>3</sup> (1 g) of tissue:   | <b>54.0 mW/g</b> |
| averaged over 10 cm <sup>3</sup> (10 g) of tissue: | <b>25.2 mW/g</b> |

### **3. Dipole impedance and return loss**

The impedance was measured at the SMA-connector with a network analyzer and numerically transformed to the dipole feedpoint. The transformation parameters from the SMA-connector to the dipole feedpoint are:

|                      |                 |                                       |
|----------------------|-----------------|---------------------------------------|
| Electrical delay:    | <b>1.148 ns</b> | (one direction)                       |
| Transmission factor: | <b>0.982</b>    | (voltage transmission, one direction) |

The dipole was positioned at the flat phantom sections according to section 1 and the distance holder was in place during impedance measurements.

|                                  |                                |
|----------------------------------|--------------------------------|
| Feedpoint impedance at 2450 MHz: | $\text{Re}\{Z\} = 54.1 \Omega$ |
|                                  | $\text{Im}\{Z\} = 2.4 \Omega$  |
| Return Loss at 2450 MHz          | <b>- 26.8 dB</b>               |

### **4. Measurement Conditions**

The measurements were performed in the flat section of the new SAM twin phantom filled with body simulating solution of the following electrical parameters at 2450 MHz:

|                       |                   |            |
|-----------------------|-------------------|------------|
| Relative permittivity | <b>52.4</b>       | $\pm 5\%$  |
| Conductivity          | <b>1.99 mho/m</b> | $\pm 10\%$ |

The DASY System with a dosimetric E-field probe ET3DV6 (SN:1507, conversion factor 4.5 at 2450 MHz) was used for the measurements.

The dipole feedpoint was positioned below the center marking and oriented parallel to the body axis (the long side of the phantom). The standard measuring distance was 10mm from dipole center to the solution surface. The included distance holder was used during measurements for accurate distance positioning.

The coarse grid with a grid spacing of 20mm was aligned with the dipole. The 5x5x7 fine cube was chosen for cube integration. Probe isotropy errors were cancelled by measuring the SAR with normal and 90° turned probe orientations and averaging.

The dipole input power (forward power) was 250mW  $\pm 3\%$ . The results are normalized to 1W input power.

### **5.1. SAR Measurement with DASY3 System**

Standard SAR-measurements were performed according to the measurement conditions described in section 4. The results (see figure supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured with the dosimetric probe ET3DV6 SN:1507 and applying the worst-case extrapolation are:

|                                                    |                  |
|----------------------------------------------------|------------------|
| averaged over 1 cm <sup>3</sup> (1 g) of tissue:   | <b>57.2 mW/g</b> |
| averaged over 10 cm <sup>3</sup> (10 g) of tissue: | <b>27.0 mW/g</b> |

### **5.2 SAR Measurement with DASY4 System**

Standard SAR-measurements were performed according to the measurement conditions described in section 4. The results (see figure supplied) have been normalized to a dipole input power of 1W (forward power). The resulting averaged SAR-values measured with the dosimetric probe ET3DV6 SN:1507 and applying the advanced extrapolation are:

|                                                    |                  |
|----------------------------------------------------|------------------|
| averaged over 1 cm <sup>3</sup> (1 g) of tissue:   | <b>51.6 mW/g</b> |
| averaged over 10 cm <sup>3</sup> (10 g) of tissue: | <b>25.0 mW/g</b> |

### **6. Dipole impedance and return loss**

The dipole was positioned at the flat phantom sections according to section 4 (with body tissue inside the phantom) and the distance holder was in place during impedance measurements.

|                                  |                       |
|----------------------------------|-----------------------|
| Feedpoint impedance at 2450 MHz: | <b>Re{Z} = 49.6 Ω</b> |
|                                  | <b>Im {Z} = 4.2 Ω</b> |
| Return Loss at 2450 MHz          | <b>- 27.5 dB</b>      |

## D3: DOSIMETRIC E-FILED PROBE

### Schmid & Partner Engineering AG

Zeughausstrasse 43, 8004 Zurich, Switzerland, Phone +41 1 245 97 00, Fax +41 1 245 97 79

## Calibration Certificate

### Dosimetric E-Field Probe

Type:

ET3DV6

Serial Number:

1687

Place of Calibration:

Zurich

Date of Calibration:

June 5, 2002

Calibration Interval:

12 months

Schmid & Partner Engineering AG hereby certifies, that this device has been calibrated on the date indicated above. The calibration was performed in accordance with specifications and procedures of Schmid & Partner Engineering AG.

Wherever applicable, the standards used in the calibration process are traceable to international standards. In all other cases the standards of the Laboratory for EMF and Microwave Electronics at the Swiss Federal Institute of Technology (ETH) in Zurich, Switzerland have been applied.

Calibrated by:

D. Vellen

Approved by:

Stefan Kofler
