Model No.: RDWL311A

### **Radiofrequency radiation exposure evaluation**

According to KDB 447498 D01v06 section 4.3.1,

>> The 1-g SAR test exclusion thresholds, for 100MHz to 6GHz, at test separation distances  $\leq 50$  mm are determined by:

Power at 0.9168GHz = 0.000000711 mW EIRP

$[(0.000000711 \text{ mW}) / (20 \text{ mm})] \cdot [\text{sqrt}(0.9168 \text{ GHz})] = 0.0000000340$  which is  $\leq 3.0$  for 1-g SAR.

Therefore the device is exempt from stand-alone SAR test requirements.

>> The fundamental frequency of the EUT is 916.8MHz, the test separation distance is < 50mm.  
(Manufacturer specified the separation distance is: 20mm)

>> The power of EUT measured is:

- For 916.8MHz:  $0.000000711\text{mW} = 10 \log (0.000000711) \text{ dBm} \sim -61.48\text{dBm}$
