

MEASUREMENT / TECHNICAL REPORT

SIEMENS NIXDORF AG

Model: Personal Computer Scenic Pro M7

FCC ID: HSSSCENICM701

July 31, 1998

This report concerns: ☒ Original grant (supplement) ☐ Class II change
Equipment type: Personal Computer

Request issue of grant: ☒ Immediately upon completion of review
☐ Defer grant per 47 CFR 0.457(d)(1)(ii) until _____ date _____. Company Name agrees to notify the Commission by _____ date _____ of the intended date of announcement of the product so that the grant can be issued on that date.

Measurement procedure used: ☒ ANSI C63.4-1992
☐ FCC/OET MP-4(1987)
☐ other _____

Limits on compliance with: CISPR 22 resp. FCC class B

Application for Certification prepared by:
Peter Rost

1 GENERAL INFORMATION

This is a supplement test according to your request, dated July 20, 1998. In this report we show, that the device complies without ferrites on the video cable when operating in the high video resolutions 1280 x 1024/100 Hz and 1600 x 1200/85 Hz.

1.1 Product Description

The Siemens Nixdorf Computer Scenic Pro M7 is a compact mini tower personal computer.

The system board integrates the Pentium Processor, memory, and I/O-technologies. The main system unit is assembled with Processors Intel Pentium II from 300 MHz up to 400 MHz.

Description of the power supply:

- Power supply: ASTEC, model S26113-E413-V30

Features Overview:

- System board in ATX format
- Intel processor Pentium II, 100 MHz clock frequency, slot 1
- second level cache, synchronous up to 512 Kbytes
- main memory 16 to 384 MBytes (SDRAM)
- 2D/3D AGP Graphic Controller on board
- up to 4 MBit Flash-BIOS

- CMOS RAM 256 Byte
- Expansion slots (on board):
 - 5 x PCI
 - 2 x AT
 - 1 x AGP

The personal computer is assembled by Siemens Nixdorf Informationssysteme AG, Buergermeister-Ulrich-Str. 100, 86199 Augsburg.

1.4 Test Methodology

Both, conducted and radiated tests were performed according to the procedures in ANSI C63.4-1992. Radiated testing below 1 GHz was performed at an antenna to EUT distance of 10 meters above 1 GHz at an antenna to EUT distance of 3 meters. All radiated emission measurements were done in an anechoic chamber. The limits for radiated and conducted emission are in compliance with CISPR 22 resp FCC class B.

1.5 Test Facility

The anechoic chamber and conducted measurement facility used to collect the emission data is located at Siemens Nixdorf Informationssysteme AG, Bürgermeister Ulrich Str. 100, 86199 Augsburg, Germany. This site has been fully described in a report dated January 24, 1997 submitted to your office, and accepted in a letter dated March 03, 1997 (31040/SIT).

2 PRODUCT LABELING

2.1 FCC ID Label

FCC ID: HSSSCENICM701

This device complies with part 15 of the FCC Rules and meets all requirements of the Canadian Interference-Causing-Equipment Regulations. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

2.2 Location of Label on EUT

see first report, dated April 29, 1998

3 SYSTEM TEST CONFIGURATION

3.1 Justification

The system was configured for testing in a maximum fashion (as a customer can use it). Each type of external ports was connected with a peripheral unit (e.g. serial port connected to a serial printer, external keyboard port connected to a keyboard and so on). During radiated emission the monitor was powered via system unit, during conducted emission also the external monitor supply was tested.

The clock frequency is 100 MHz, the system was tested with the highest possible processor:

100 MHz clock: Intel Pentium II 400 MHz

The system is provided with one kind of power supply:

– ASTEC AA20050 SNI: S26113-E413-V30

With relation to the worst case combinations (video resolution, second serial port or chip card reader) in the first report, dated April 29, 1998, the following (worst case) results are applicable:

Radiated emission:

Frequency range 30 MHz - 1 GHz:

100 MHz clock/Pentium II 400 MHz, video resolution 1280 x 1024/100 Hz,
two serial printers

100 MHz clock/Pentium II 400 MHz, video resolution 1600 x 1200/
85 Hz, two serial printers

Frequency range 1 GHz - 3 GHz:

100 MHz clock/Pentium II 400 MHz, video resolution 1280 x 1024/100 Hz,
two serial printers

100 MHz clock/Pentium II 400 MHz, video resolution 1600 x 1200/85 Hz,
two serial printers

Conducted emission:

100 MHz clock/Pentium II 400 MHz, video resolution 1280 x 1024/100 Hz,
monitor power via system unit, two printers

100 MHz clock/Pentium II 400 MHz, video resolution 1600 x 1200/85 Hz
monitor power via system unit, two printers

3.2 Video mode Justification

With reference to the worst case results of the measurements for the first report, dated April 29, 1998 the system was tested in the high resolution graphic modes 1280 x 1024/100 Hz and 1600 x 1200/85 Hz. To carry out the test in this high resolution it is necessary to test with a monitor which is capable to drive this video resolution. To meet your requirement we removed the two ferrites from the video cable (see figure, page 55) which are usually fixed.

The following datas are applicable:

radiated emission:

Frequency range 30 MHz - 1 GHz:

100 MHz clock/Pentium II 400 MHz, video resolution 1280 x 1024/100 Hz,
two serial printers

100 MHz clock/Pentium II 400 MHz, video resolution 1600 x 1200/85 Hz,
two serial printers

Frequency range 1 GHz - 3 GHz:

100 MHz clock/Pentium II 400 MHz, video resolution 1280 x 1024/100 Hz,
two serial printers

100 MHz clock/Pentium II 400 MHz, video resolution 1600 x 1200/85 Hz,
two serial printers

conducted emission:

100 MHz clock/Pentium II 400 MHz, video resolution 1280 x 1024/100 Hz,
monitor power via system unit, two printers

100 MHz clock/Pentium II 400 MHz, video resolution 1600 x 1200/85 Hz
monitor power via system unit, two printers

3.3 EUT Exercise Software

The EUT exercise program used during radiated and conducted testing was designed to exercise the various system components in a manner similar to typical use.

The used sequence is:

- scrolling "H" with applicable video mode (see 3.2)
- internal Floppy drive writes to the HD and reads back
- internal CD-ROM writes to the HD
- "H`s" are sent to the printer ports
- data is sent to USB ports

3.4 Special Accessories

As shown in Figure 3.1, all interface cables used for compliance testing are shielded like normally supplied by the manufacturer. All cable connectors feature integral metal hoods for shielding.

3.5 Equipment Modifications

To achieve compliance to Class B levels, the following modifications were made during compliance testing:

no modifications

Applicant Signature _____ Date _____

Typed/Printed Name _____ Position _____

3.6 Configuration of Tested System

All necessary tests were carried out like figure 3.1. The system was used according to paragraph 1.1. During test for conducted emission the EUT was connected to a LISN. All peripherals were supplied by a second LISN. The equipment was configured according to ANSI C63.4-1992 Fig 11.

Figure 3.1 Configuration of Tested System

4 BLOCK DIAGRAM OF EUT

see first report, dated April 29, 1998

6 CONDUCTED EMISSION DATA

6.1 Test Procedure

The initial step in collecting conducted emission data is a Rohde & Schwarz Test Receiver (ESHS10). During first scan all data in peak mode is measured, then all significant peaks are explored either in quasi-peak mode or in average mode. In case of low noise (no peak value reaches the quasi peak limit), only average checks are done.

6.2 Measured Data

The conducted emission was measured the following way:

1. Peak noise on L
2. Peak noise on N

During the emission measurement the printers are supplied with power via a second LISN, the monitor was either powered via the system unit or separately.

The worst case result of the corresponding configuration (video resolution, supply modus) is given next:

Kind of configuration:

- a) 100 MHz clock Pentium II 400 MHz, video resolution 1280 x 1024/100 Hz monitor via system unit, two serial printers
- b) 100 MHz clock Pentium II 400 MHz, video resolution 1280 x 1024/85 Hz monitor via system unit, two serial printers

7 RADIATED EMISSION DATA

7.1 Test Procedure

The radiated emission was measured in two parts:

1. in the frequency range from 30 MHz to 1000 MHz. The bandwidth of the EMI-receiver was set to 120 kHz and the detector was set to peak. During pre-scan all data in peak mode are accumulated automatically. At final measurement the detector was set to CISPR quasi peak and values above the acceptance line were verified automatically.
2. in the frequency range from 1000 MHz to 3000 MHz. The bandwidth of the EMI-receiver was set to 1 MHz and the detector was set to peak. During pre-scan all data in peak mode are accumulated automatically. At final measurement the detector was set to average and values above the acceptance line were verified automatically.

Both tests were performed in a semi anechoic chamber, measurements below 1000 MHz in a distance of 10 meters between antenna and EUT, above 1 GHz with a distance of 3 meters between antenna and EUT. During tests the EUT was turned 360° and the actual used receiving antenna was moved from 1 to 4 meters and the antenna polarisation was changed from horizontal to vertical for finding the maximum levels of emission.

For each range one antenna for the whole span was used

1. 30 MHz to 1000 MHz: log.-per antenna
2. 1000 MHz to 3000 MHz: rigid tensor antenna

After automatic tests during manual verification the cables and the equipment were placed and moved within the range of position in order to find the maximum of emission.

For further data see enclosed test results.

7.2 Measured Data

The EUT was measured with the Processor Pentium II 400 MHz in video modes 1280 x 1024 and 1600 x 1200. The test results below reflect the worst case with:

- MHz clock/Pentium II 400 MHz, video resolution: 1280 x 1024/100 Hz, two serial printers
- 100 MHz clock/Pentium II 400 MHz, video resolution: 1600 x 1200/85 Hz, two serial printers

Video resolution: 1280 x 1024/100 Hz:

Part 1: frequency range 30 MHz - 1000 MHz:

Judgement: Passed by

Frequency [MHz]	Level* [dB(µV/m)]	Limit [dB(µV/m)]	Exceeding [dB]	Ant Pol	Height in [m]	Angle in deg
94.53000	26.63	30.000	-3.4	ver	1.0000	180.00
695.16000	33.11	37.000	-3.9	ver	4.0000	150.00
700.26000	34.26	37.000	-2.7	ver	2.2000	150.00
827.19000	33.15	37.000	-3.9	ver	3.4000	210.00
893.73000	32.72	37.000	-4.3	ver	1.6000	150.00

all levels are quasi-peak levels

Part 2: frequency range 1 GHz - 3 GHz:

Judgement: Passed by

Frequency [MHz]	Level* [dB(µV/m)]	Limit [dB(µV/m)]	Margin [dB]	Exceed Mark	Height [cm]	Azimuth [deg]	Ant Pol
1000.000000	22.96	54.0	31.0		150.0	300.00	ver
1007.500000	21.00	54.0	33.0		150.0	300.00	hor

N/A

7.4 Test Instrumentation Used, Radiated Measurement

Type	Manufacturer/ Model No.	Serial No.	Last Cal.	Cal. Interval
Receiver	ESMI Rohde&Schwarz	840607/006	Jan. 97	15 months
Antenna	CBL 6111 Chase	1345	May 98	12 months
Active Ridged antenna	Tensor 4105 Rohde&Schwarz	2063	May 98	12 months

7.5 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor automatically to the measured value. The display of the Receiver shows the corrected value. The complete table of correction factors is given on next page. The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CF$$

where FS = Field Strength

AF = Antenna Factor (incl. Preamplifier factor)

CF = Cable Attenuation Factor

Assume a receiver reading of 28,5 dB μ V is obtained. The Antenna Factor of 10,5 and a Cable Factor of 1,3 is added, giving a field strength of 40,3 dB μ V/m.

$$FS = 28,5 + 10,5 + 1,3 = 40,3 \text{ dB}\mu\text{V/m}$$

The 40,3 dB μ V/m value can be mathematically converted to its corresponding level in μ V/m.

Level in μ V/m =
Common Antilogarithm $[(40,3 \text{ dB}\mu\text{V/m})/20] =$

103,5 μ V/m

7.6 Table of Correction Factors

Frequency range: 30 MHz to 1000 MHz

Frequency [MHz]	Correction Bilog Antenna [dB]	Correction Cable [dB]	Correction Antenna + Cable [dB]
550,0	19,00	2,62	21,62
600,0	18,70	2,73	21,43
650,0	19,70	2,88	22,58
700,0	19,00	2,91	21,91
750,0	20,00	3,01	23,01
800,0	19,90	3,21	23,11
850,0	22,90	3,32	26,22
900,0	20,70	3,40	24,10
950,0	21,00	3,49	24,49
1000,0	25,00	3,69	28,69

Frequency range: 1 GHz to 3 GHz

Frequency [GHz]	Correction Tensor Antenna with Pre- amplifier [dB]	Correction Cable [dB]	Correction Antenna + Cable [dB]
1,0	5,70	1,62	7,32
1,1	4,80	1,68	6,48
1,2	5,10	1,75	6,85
1,3	5,00	1,80	6,80
1,4	5,10	1,96	7,06
1,5	5,90	2,00	7,90
1,6	5,60	2,15	7,75
1,7	6,70	2,30	9,00
1,8	6,60	2,32	8,92
1,9	5,90	2,35	8,25
2,0	7,20	2,44	9,64
2,1	7,30	2,62	9,92
2,2	7,40	2,75	10,15
2,3	8,40	2,70	11,10
2,4	8,00	2,69	10,69
2,5	9,30	2,65	11,95
2,6	8,70	2,75	11,45
2,7	8,70	2,92	11,62
2,8	9,00	2,98	11,98
2,9	8,60	3,10	11,70
3,0	9,50	3,12	12,62

8.2 For further figures see first report, dated April 29, 1998
