

FCC CLASS B COMPLIANCE REPORT

(CLASS II PERMISSIVE CHANGE)

for

Electromagnetic Emissions

of

LCD MONITOR

Trade Name : TRL, RIC
Model Number : L-41T
FCC ID : HSUTRLL-41T
Serial Number : Pre-production
Report Number : 980286-F
Date : October 9, 1998

Prepared for :

ROYAL INFORMATION ELECTRONICS CO., LTD.
No. 3, Lane 11, Tzu-Chang St., Tu-Cheng Ind. District.
Taipei Hsian, Taiwan, R.O.C.

Prepared by :

C&C LABORATORY, TAIWAN

VERIFICATION OF COMPLIANCE

Equipment Under Test: LCD MONITOR
Trade Name: TRL, RIC
Model Number: L-41T
Serial Number: Pre-production
FCC ID: HSUTRLL-41T
Applicant: ROYAL INFORMATION ELECTRONICS CO., LTD.
No. 3, Lane 11, Tzu-Chang St., Tu-Cheng Ind. District.
Taipei Hsian, Taiwan, R.O.C.
Type of Test: FCC Class B
Measurement Procedure: ANSI C63.4: 1992
File Number: 980286-F
Date of test: Sep. 24-28, 1998
Tested by: Sunny Chen
Deviation: None
Condition of Test Sample: Good

The above equipment was tested by C&C Laboratory Co., Ltd. for compliance with the requirements set forth in the FCC Rules and Regulations Part 15, Subpart B and the measurement procedure according to ANSI C63.4, 1992. This said equipment in the configuration described in the above report, shows the maximum emission levels emanating from equipment are within the compliance requirements.

The test results of this report relate only to the tested sample identified in this report.

Charles Wang / Director

GENERAL INFORMATION

Applicant: ROYAL INFORMATION ELECTRONICS CO., LTD.
No. 3, Lane 11, Tzu-Chang St., Tu-Cheng Ind. District.
Taipei Hsian, Taiwan, R.O.C.

Contact Person: J. Y. JAN

Phone Number: (02)2268-4100 ext.580

Fax Number: (02)2268-0908

Manufacturer: ROYAL INFORMATION ELECTRONICS CO., LTD.
No. 3, Lane 11, Tzu-Chang St., Tu-Cheng Ind. District.
Taipei Hsian, Taiwan, R.O.C.

File Number: 980286-F

Date of Test: Sep. 24-28, 1998

Equipment Under Test: LCD MONITOR

Model Number: L-41T

Serial Number: Pre-production

FCC ID: HSUTRLL-41T

Type of Test: FCC Class B

Measurement Procedure: ANSI C63.4:19924

Frequency Range: 150kHz to 30MHz for Line Conducted Test
30MHz to 1000MHz for Radiated Emission Test

SYSTEM DESCRIPTION

EUT Test Program:

1. The EUT was set at worst case display mode.
2. EMI test program was loaded and executed in Window mode.
3. Data was sent to EUT and filling the screens with upper case of "H" patterns.
4. Test program sequentially exercised printer and modem and sent "H" patterns to them individually.
5. Repeat 3 to 4. Test program is self-repeating throughout the test.

PRODUCT INFORMATION

Housing Type: Plastic with Coating

AC power during Test: 115VAC/60Hz

Power Supply Power Rating: 13Vdc, 1.6A
5Vdc, 2.8A

AC Adapter Manufacturer: ROYAL

AC Adapter Model: ADP-02

AC Adapter Power Rating: I/P: 100-240VAC, 50/60Hz, 0.85A
O/P: 13Vdc, 1.6A
5Vdc, 2.8A

AC Adapter Power Cable Type: AC IN: Unshielded, 1.8m
DC OUT: Shielded, 0.5m with a core

Video Cable: Shielded, 1.8m with two ferrite core.

USB Cable: Shielded, 1.6m

OSC/Clock Frequencies : 12MHz, 4MHz

14.1" XGA/TFT LCD Panel: NEC **Model:** NL10276AC28-01

I/O PORT TYPES	Q'TY	TESTED WITH
1). Video Port	1	1
2). Microphone In Port	1	1
3). Microphone Out Port	1	1
4). Speaker Out Port	1	1
5). Line-In Port	1	1
6). Down Stream USB Port	4	4
7). Up Stream USB Port	1	1

Note: All the above equipment/cables were placed in worse case positions to maximize emission signals during emission test.

Grounding: Grounding was in accordance with the manufacturer's requirements and conditions for the intended use.

MEASUREMENT PROCEDURE (PRELIMINARY LINE CONDUCTED EMISSION TEST)

- 1) The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. When the EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.4: 1992 (see Test Facility for the dimensions of the ground plane used). When the EUT is a floor-standing equipment, it is placed on the ground plane which has a 3-12 mm non-conductive covering to insulate the EUT from the ground plane.
- 2) Support equipment, if needed, would be placed as per ANSI C63.4: 1992.
- 3) All I/O cables were positioned to simulate typical actual usage as per ANSI C63.4: 1992.
- 4) The EUT received AC power through a Line Impedance Stabilization Network (LISN) which supplied power source of 115VAC/60Hz and was grounded to the ground plane.
- 5) All support equipment received power from a second LISN supplying power of 110VAC/60Hz.
- 6) The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum analyzer connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to analyzer and Line 2 connected to a 50 ohm load; the second scan has Line 1 connected to a 50 ohm load and Line 2 connected to the analyzer.
- 7) Analyzer is scanned from 450kHz to 30MHz for emissions in each of the test modes. Analyzer settings are stated on the Measuring Instrument Settings page.
- 8) During the above scans, the emissions were maximized by cable manipulation.
- 9) The following test mode(s) were scanned during the preliminary test:
Modes:
 1. EUT running at video resolution: 640x480
 2. EUT running at video resolution: 800x600
 3. EUT running at video resolution: 1024x768
- 10) After the preliminary scan, we found the following test mode(s) producing the highest emission level.

Mode: 3

Then, the EUT configuration and cable configuration of the above highest emission level were recorded for reference of final testing.

MEASUREMENT PROCEDURE (FINAL LINE CONDUCTED EMISSION TEST)

- 1) EUT and support equipment was set up on the test bench as per step 10 of the preliminary test.
- 2) A scan was taken on both power lines, Line 1 and Line 2, recording at least the six highest emissions. Emission frequency and amplitude were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit. If EUT emission level was less -2dB to the Q.P. limit in peak mode, then the emission signal was re-checked using a Quasi-Peak detector.
- 3) The test data of the worst case condition(s) was reported on the Summary Data page.

Data Sample:

Freq. MHz	PEAK Raw dBuV	Q.P. Raw DbuV	Average Raw dBuV	Q.P. Limit dBuV	Average Limit dBuV	Q.P. Margin dB	Average Margin dB	Note
x.xx	43.95	---	---	56	46	-12.05	-2.05	L 1

Freq.	= Emission frequency in MHz
Raw dBuV	= Uncorrected Analyzer/Receiver reading
Limit dBuV	= Limit stated in standard
Margin dB	= Reading in reference to limit
Note	= Current carrying line of reading
“---”	= The emission level complied with the Average limits, with at least 2 dB margin, so no further recheck.

LINE CONDUCTED EMISSION LIMIT

Frequency	Maximum RF Line Voltage	
	Q.P.	AVERAGE
150kHz-500kHz	66-56dBuV	56-46dBuV
500kHz-5MHz	56dBuV	46dBuV
5MHz-30MHz	60dBuV	50dBuV

Note: The lower limit shall apply at the transition frequency.

MEASUREMENT PROCEDURE (PRELIMINARY RADIATED EMISSION TEST)

- 1) The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. When the EUT is a tabletop system, a wooden turntable with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.4: 1992 (see Test Facility for the dimensions of the ground plane used). When the EUT is a floor-standing equipment, it is placed on the ground plane which has a 3-12 mm non-conductive covering to insulate the EUT from the ground plane.
- 2) Support equipment, if needed, would be placed as per ANSI C63.4: 1992.
- 3) All I/O cables were positioned to simulate typical actual usage as per ANSI C63.4: 1992n.
- 4) The EUT received 115VAC/60Hz power source from the outlet socket under the turntable. All support equipment received 110VAC/60Hz power from another socket under the turntable.
- 5) The antenna was placed at some given distance away from the EUT as stated in ANSI C63.4: 1992. The antenna connected to the analyzer via a cable and at times a pre-amplifier would be used.
- 6) The analyzer was quick scanning from 30MHz to 1000MHz. Analyzer settings are stated on the Measuring Instrument Settings page. The EUT test program was started. Emissions were scanned and measured rotating the EUT 360 degrees and positioning the antenna 1 to 4 meters above the ground plane, in both the vertical and the horizontal polarization, to maximize the emission reading level.
- 7) The following test mode(s) were scanned during the preliminary test:

Modes:

- 1. EUT running at video resolution: 640x480**
- 2. EUT running at video resolution: 800x600**
- 3. EUT running at video resolution: 1024x768**

- 8) After the preliminary scan, we found the following test mode(s) producing the highest emission level.

Mode: 3

Then, the EUT and cable configuration, antenna position, polarization and turntable position of the above highest emission level were recorded for reference of final testing.

MEASUREMENT PROCEDURE (FINAL RAIDATED EMISSION TEST)

- 1) EUT and support equipment were set up on the turntable as per step 8 of the preliminary test.
- 2) The analyzer scanned from 30MHz to 1000MHz. Emissions were scanned and measured rotating the EUT to 360 degrees, varying cable placement and positioning the antenna 1 to 4 meters above the ground plane, in both the vertical and the horizontal polarization, to maximize the emission reading level.
- 3) Recorded at least the six highest emissions. Emission frequency, amplitude, antenna position, polarization and turntable position were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit. If EUT emission level was less -2dB to the limit in peak mode, then the emission signal was re-checked using a Quasi-Peak detector, and only Q.P. reading will record in this report.
- 4) The test data of the worst case condition(s) was reported on the Summary Data page.

Data Sample:

Freq. (MHz)	Raw Data (dB)	Corr. Factor (dBuV)	Emiss. Level (dBuV/m)	Limits	Margin (dB)	Det ector	Ant. Heig. (cm)	Turn Table (°)
xx.xx	14.0	11.2	26.2	30	-3.8	Peak	102	17

Freq.	= Emission frequency in MHz
Raw Data (dB)	= Uncorrected Analyzer / Receiver reading
Corr. Factor (dBuV)	= Correction factors of antenna factor and cable loss
Emiss. Level	= Raw reading converted to dBuV and CF added
Limit dBuV/m	= Limit stated in standard
Margin dB	= Reading in reference to limit
Detector	= Detector function (Peak, Q.P.)
Antenna Height	= Antenna height above ground plane
Turn Table	= EUT placement in reference to antenna

RADIATED EMISSION LIMIT

Frequency (MHz)	Distance (m)	Maximum Field Strength Limit (dBu V/m/ Q.P.)
30-230	10	30
230-1000	10	37

SUMMARY DATA (LINE CONDUCTED TEST)

LETTER OF AGENT AUTHORIZATION

File Number: 980286-F
October 9, 1998
FCC ID: HSUTRLL-41T

Federal Communications Commission
Authorization and Evaluation Division
7435 Oakland Mills Road
Columbia, MD 21046
U.S.A

Gentlemen,

We the undersigned, hereby authorized C&C Laboratory, Taiwan to act on our behalf in all matters relating to applications for equipment authorizations, including the signing of all documents relating to these matters. Any and all acts carried out by C&C Laboratory, Taiwan on our behalf shall have the same effect as acts of our own.

The applicant certifies that, in the case of an individual applicant is not subject to a denial of federal benefits, that includes FCC benefits, pursuant to Section 5301 of the Anti-Drug Abuse Act of 1988, 21 U.S.C. 853 (a) , in the case of a non-individual applicant (e.g. corporation, partnership or other unincorporated association) , no party to the application is subject to a denial of federal benefits, that includes FCC benefits, pursuant to that section.

Sincerely yours,

J. Y. JAN / Assistant Manager

APPDENDIX 2

LETTER OF MODIFICATION

October 9, 1998
FCC ID: HSUTRLL-41T

Federal Communications Commission
Authorization and Evaluation Division
7435 Oakland Mills Road
Columbia, MD 21046
U.S.A

FCC ID : HSUTRLL-41T

Gentlemen:

The following modifications will be installed to our unit (FCC ID : HSUTRLL-41T) in order to comply with FCC rules for a class B computing device. These modifications will be incorporated in each unit sold under the above FCC ID.

1. To add a core on Audio Cable and DC Cable, please refer to page 42 and page 43.
2. To add four conductive type on LCD Panel metal shell, please refer to page 47 and page 48.
3. To add two gaskets on LCD Panel metal shell, please refer to page 48.
4. To add a core on keypad connect cable, please refer to page 51.
5. To add a core on connect cable of inverter board and three cores on connect cable of control panel board , please refer to page 52.

We understand that changes may be made to the product if the product is re-tested and a Class I or Class II permissive changes (as applicable) is applied for. We understand that the Equipment Grant Authorization must be issued before we can marketed our product, or the Class I or Class II change must be approved before we can market our product.

We also understand that peripherals (computer input/output device, modems, printer, etc.) certified to comply with the Class B limits are the only peripherals that may be sold with this computer.

Sincerely yours,

J. Y. JAN / Assistant Manager

APPDENDIX 3

FCC ID LABLE & LOCATION

APPENDIX 6

TEST FACILITY

TEST FACILITY

Location: No. 15, 14 Line, Chin Twu Chi, Lu Chu Hsiang, Taoyuan, Taiwan, R.O.C.

Description: There are two 3/10m open area test sites and two line conducted labs for final test, and one 3/10m open area test site for engineering lab. The Open Area Test Sites and the Line Conducted labs are constructed and calibrated to meet the FCC requirements in documents ANSI C63.4: 1992 and CISPR 22/EN 55022 requirements.

Site Filing: A site description is on file with the Federal Communications Commission, 7435 Oakland Mills Road, Columbia, MD 21046.

Registration also was made with Voluntary Control Council for Interference (VCCI).

Site Accreditation: Accredited by NEMKO (Authorization #: ELA 124) for EMC & A2LA (Certificate #: 824.01) for Emission

Instrument Tolerance: All measuring equipment is in accord with ANSI C63.4 and CISPR22 requirement that meet industry regulatory agency and accreditation agency requirement.

Ground Plane: Two conductive reference ground planes were used during the Line Conducted Emission, one in vertical and the other in horizontal. The dimensions of these ground planes are as below. The vertical ground plane was placed distancing 40 cm to the rear of the wooden test table on where the EUT and the support equipment were placed during test. The horizontal ground plane projected 50 cm beyond the footprint of the EUT system and distanced 80 cm to the wooden test table. For Radiated Emission Test, one horizontal conductive ground plane extended at least 1m beyond the periphery of the EUT and the largest measuring antenna, and covered the entire area between the EUT and the antenna. It has no holes or gaps having longitudinal dimensions larger than one-tenth of a wavelength at the highest frequency of measurement up to 1GHz.

Site #1 and # 3 Line Conducted Test Site: Vertical ground plane (2.2m x 2.2m)
Horizontal ground plane (2.5m x 2.5m)

**THE AMERICAN
ASSOCIATION
FOR LABORATORY
ACCREDITATION**

ACCREDITED LABORATORY

A2LA has accredited

C & C LABORATORY CO., LTD
Taoyuan, Taiwan, R.O.C

for technical competence in the field of

Electrical (EMC) Testing

The accreditation covers the specific tests and types of tests listed on the agreed scope of accreditation. This laboratory meets the requirements of ISO/IEC Guide 25-1990 "General Requirements for the Competence of Calibration and Testing Laboratories" (equivalent to relevant requirements of the ISO 9000 series of standards) and any additional program requirements in the identified field of testing.

Presented this 7th day of November, 1997.

Peter R. Meyer

President

For the Accreditation Council

Certificate Number 824.01

Valid to January 31, 2000

For tests or types of tests to which this accreditation applies, please refer to the
laboratory's Electrical (EMC) Scope of Accreditation

Re: Measurement facility located at Taoyuan
(3 and 10 meter site)

Gentlemen:

Your submission of the description of the subject measurement facility has been reviewed and found to be in compliance with the requirements of Section 2.948 of the FCC Rules. The description has, therefore, been placed on file and the name of your organization added to the Commission's list of facilities whose measurement data will be accepted in conjunction with applications for certification or notification under Parts 15 or 18 of the Commission's Rules. Our list will also indicate that the facility complies with the radiated and AC line conducted test site criteria in ANSI C63.4-1992. Please note that this filing must be updated for any changes made to the facility, and at least every three years the data on file must be certified as current.

Per your request, the above mentioned facility has been also added to our list of those who perform these measurement services for the public on a fee basis. This list is updated monthly and is available on the Laboratory's Public Access Link (PAL) at 301-725-1072, and also on the Internet at the FCC Website www.fcc.gov/oet/info/database/testsite/.

Sincerely,

Thomas W. Phillips

受文者：程智科技股份有限公司

檢台八十七二字第 68910 號

行文單位：正本：程智科技股份有限公司

副本：本局第二組(二份)、第三組、秘書室(秘四科請刊載於檢驗雜誌)、資訊室(請刊載於國際網路)、檢驗處、各分局(均無附件)

主旨：有關 貴公司電磁相容檢測實驗室申請本局電磁相容檢測領域認可案，業經實地評鑑結果，同意認可登錄，請查照。

說明：

一、認可登錄範圍如下：

實驗室名稱：程智科技股份有限公司電磁相容檢測實驗室

實驗室地址：桃園縣蘆竹鄉赤塗崎二鄰15號

認可代號	認可產品類別	報告簽署人
SL2-IN-E-14	(II) 資訊設備(CNS13438)	林淑女

評核標準：ISO Guide 25(1990年版)

二、本案評核認可期限三年，自八十七年元月十七日起至九十年元月十六日止，評核追查頻率每年乙次，得視需要增加稽查次數。

三、上開已認可領域如有變更事項，請於變更日起二週內函送相關資料至本局辦理。

四、貴公司執行本局指定之檢驗業務，依「商品檢驗法」第二十六條規定以執行公務論，且 貴公司應依規定履行相關之責任與義務。

五、檢送「商品電磁相容型式試驗報告」格式乙份，請自行印製使用。

EMC Laboratory Authorization

Aut. No. : ELA 124

EMC Laboratory: C&C Laboratory Taiwan
No. 28 Wen-Hwa Street, 330 Taoyuan
TAIWAN R.O.C.

Scope of Authorization: The authorization covers the following standards:

EN 50081-1	EN 50082-1
EN 55022	IEC 801-2
EN 60555-2,-3	IEC 801-3
EN 61000-3-2	IEC 801-4
EN 61000-3-3	EN 61000-4-2
EN 61000-4-3	EN 61000-4-4

This is to confirm that the abovementioned EMC Laboratory has been authorized according to the conditions described in Nemko Document ELA 10.

During Nemko's visit to the laboratory on the 08. October. 1997 an assessment was made of your facilities, qualifications and testing practices, and the relevant part of your organization. It was found that the EMC Laboratory is capable of performing tests within the scope mentioned above, accordingly, Nemko will accept your test results as a basis for attesting conformity with these EMC Standards for the products in question.

In case of product certification, your test report may be used by the applicant manufacturer, enclosed to his application.

In order to maintain the authorization, the information given in the enclosed ELA-INFOs has to be carefully followed. Nemko is to be promptly notified about any changes in the situation at your laboratory which may affect the basis for this authorization. The authorization may at any time be withdrawn if the conditions are no longer considered to be fulfilled.

The authorization is issued on the conditions that you have signed the "Statement by Authorization", ELA 3A-Form. The Statement of 08 October. 1997 is binding.

Oslo, 20. October. 1997

For Nemko as

Kjell Bergh, Head of EMC Section

APPENDIX 7

TEST EQUIPMENT

MEASURING INSTRUMENT SETTING

TEST TYPE	DETECTOR	FREQUENCY RANGE	RESOLUTION BANDWIDTH	VIDEO BANDWIDTH
Conducted	Peak/Avg	10kHz-150kHz	300Hz	100kHz
Conducted	Peak/QP/Avg	150kHz-30MHz	9kHz	100kHz
Radiated	Peak	30MHz-1GHz	100kHz	100kHz
Radiated	QP	30MHz-1GHz	120kHz	120kHz
Radiated	Peak/Avg	Above 1GHz	1MHz	1MHz

Note: All readings on data pages are taken with the detector in peak mode unless otherwise stated.

UNITS OF MEASUREMENT

Measurements of radiated interference are reported in terms of dB(uV/m), at a specified distance. The indicated readings on the spectrum analyzer are converted to dB(uV/m) by use of appropriate conversion factors. Measurements of conducted interference are reported in terms of dB(uV).

TEST EQUIPMENT LIST

Instrumentation: The following list contains equipment used at C & C Laboratory, Co., Ltd. for testing. The equipment conforms to the CISPR 16-1 / ANSI C63.2-1988 Specifications for Electromagnetic Interference and Field Strength Instrumentation from 10kHz to 1.0 / 2.0 GHz.

Equipment used during the tests:
