

EMC Laboratory Authorization

Aut. No. : ELA 124

EMC Laboratory: C&C Laboratory Taiwan
No. 28 Wen-Hwa Street, 330 Taoyuan
TAIWAN R.O.C.

Scope of Authorization: The authorization covers the following standards:

EN 50081-1	EN 50082-1
EN 55022	IEC 801-2
EN 60555-2,-3	IEC 801-3
EN 61000-3-2	IEC 801-4
EN 61000-3-3	EN 61000-4-2
EN 61000-4-3	EN 61000-4-4

This is to confirm that the abovementioned EMC Laboratory has been authorized according to the conditions described in Nemko Document ELA 10.

During Nemko's visit to the laboratory on the 08. October. 1997 an assessment was made of your facilities, qualifications and testing practices, and the relevant part of your organization. It was found that the EMC Laboratory is capable of performing tests within the scope mentioned above, accordingly, Nemko will accept your test results as a basis for attesting conformity with these EMC Standards for the products in question.

In case of product certification, your test report may be used by the applicant manufacturer, enclosed to his application.

In order to maintain the authorization, the information given in the enclosed ELA-INFOs has to be carefully followed. Nemko is to be promptly notified about any changes in the situation at your laboratory which may affect the basis for this authorization. The authorization may at any time be withdrawn if the conditions are no longer considered to be fulfilled.

The authorization is issued on the conditions that you have signed the "Statement by Authorization", ELA 3A-Form. The Statement of 08 October. 1997 is binding.

Oslo, 20. October. 1997

For Nemko as

Kjell Bergh, Head of EMC Section

茲以 程智科技股份有限公司程智科技電磁相容實驗室之電性測試領域經評鑑認可

十項發給本證書有效期限至九十年十一月十四日 此證

This is to certify that C & C Laboratory Co., Ltd. has been recognized by the Council of Chinese National Laboratory Accreditation as an accreditation laboratory. The laboratory has been registered for ten specific tests within the field of Electrical Testing. The details of the scope of accreditation is described in the following pages and this Certificate is valid until Nov. 14, 2001.

中華民國實驗室認證委員會
主任委員

Chen, Ming-Bang

VERIFICATION OF COMPLIANCE

Equipment Under Test: LCD MONITOR
Trade Name: TRL, RIC
FCC ID: HSUTRLL-50T
Model Number: L-50T
Serial Number: N/A
Applicant: **ROYAL INFORMATION ELECTRONICS CO., LTD.**
No. 3, Lane 11, Tzu-Chang St., Tu-Cheng Ind. District,
Taipei Hsien, Taiwan, R.O.C.
Manufacturer: **ROYAL INFORMATION ELECTRONICS CO., LTD.**
No. 3, Lane 11, Tzu-Chang St., Tu-Cheng Ind. District,
Taipei Hsien, Taiwan, R.O.C.
Type of Test: FCC Class B
Measurement Procedure: ANSI C63.4: 1992
File Number: 980316-F
Date of test: Nov. 22 / 23, 1998
Tested by: Clare Chou
Deviation: None
Condition of Test Sample: Normal

The above equipment was tested by C&C Laboratory, Co., Ltd. for compliance with the requirements set forth in the FCC Rules and Regulations Part 15, Subpart B and the measurement procedure according to ANSI C63.4, 1992. This said equipment in the configuration described in this report shows the maximum emission levels emanating from equipment are within the compliance requirements.

The test results of this report relate only to the tested sample identified in this report.

Charles Wang / Director

VERIFICATION OF COMPLIANCE

Equipment Under Test: LCD MONITOR
Trade Name: TRL, RIC
FCC ID: HSUTRTL-50T
Model Number: L-50T

All the above equipment/cables were placed in worse case positions to maximize emission signals.

Grounding: Grounding was in accordance with the manufacturer's requirements and conditions for the intended use.

MEASUREMENT PROCEDURE (PRELIMINARY LINE CONDUCTED EMISSION TEST)

1) The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. When the EUT is a tabletop system, a wooden table with a height of 0.8 meters is used and is placed on the ground plane as per ANSI C63.4: 1992 (see Test Facility for the dimensions of the ground plane used). When the EUT is a floor-standing equipment, it is placed on the ground plane which has a 3-12 mm non-conductive covering to insulate the EUT from the ground plane.

2) Support equipment, if needed, was placed as per ANSI C63.4: 1992.

3) All I/O cables were positioned to simulate typical actual usage as per ANSI C63.4: 1992.

4) The EUT received AC power through a Line Impedance Stabilization Network (LISN) which supplied power source of 115VAC/60Hz and was grounded to the ground plane.

5) All support equipment received power from a second LISN supplying power of 110VAC/60Hz.

6) The EUT test program was started. Emissions were measured on each current carrying line of the EUT using a spectrum analyzer connected to the LISN powering the EUT. The LISN has two monitoring points: Line 1 (Hot Side) and Line 2 (Neutral Side). Two scans were taken: one with Line 1 connected to analyzer and Line 2 connected to a 50 ohm load; the second scan had Line 1 connected to a 50 ohm load and Line 2 connected to the analyzer.

7) Analyzer scanned from 150kHz to 30MHz for emissions in each of the test modes. Analyzer settings were stated on the Measuring Instrument Settings page.

8) During the above scans, the emissions were maximized by cable manipulation.

9) The following test mode(s) were scanned during the preliminary test:
Mode(s):

1. EUT running at video resolution: 640x480 (60Hz)
2. EUT running at video resolution: 1024 x 768 (70Hz)
3. EUT running at video resolution: 1024 x 768 (75Hz)

10) After the preliminary scan, we found the following test mode(s) producing the highest emission level.
Mode: 3

Then, the EUT configuration and cable configuration of the above highest emission level were recorded for reference of final testing.

1) EUT and support equipment was set up on the test bench as per step 10 of the preliminary test.

2) A scan was taken on both power lines, Line 1 and Line 2, recording at least the six highest emissions. Emission frequency and amplitude were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit. If EUT emission level was less -2dB to the A.V. limit in peak mode, then the emission signal was re-checked using a Quasi-Peak/A.V. detector.

MEASUREMENT PROCEDURE

3) The test data of the worst case condition(s) was reported on the Summary Data page.

Data Sample:

Freq.	MHz	PEAK	Raw	dBuV	43.95	---	---	Average	Raw	dBuV	56	46	-12.05	-2.05	L1
											Q.P.	Limit	Limit	Q.P.	Note

Limit dBuV

Margin dB

“---”
Note

- = Emission frequency in MHz
- = Uncorrected Analyzer/ Receiver reading
- = Limit stated in standard
- = Reading in reference to limit
- = Current carrying line of reading
- = The emission level complied with the Average limits with at least 2dB margin, so no further recheck.

LINE CONDUCTED EMISSION LIMIT

Frequency	Maximum RF Line Voltage	
	Q.P.	AVERAGE
	66-56dBuV	56-46dBuV
	56dBuV	46dBuV
	60dBuV	50dBuV
150KHz-500KHz		
500KHz-5MHz		
5MHz-30MHz		

Note: The lower limit shall apply at the transition frequency.

MEASUREMENT PROCEDURE (PRELIMINARY RADIATED EMISSION TEST)

1) The equipment was set up as per the test configuration to simulate typical actual usage per the user's manual. When the EUT is a tabletop system, a wooden turntable with a height of 0.8 meters is used which is placed on the ground plane as per ANSI C63.4: 1992 (see Test Facility for the dimensions of the ground plane used). When the EUT is a floor-standing equipment, it is placed on the ground plane which has a 3-12 mm non-conductive covering to insulate the EUT from the ground plane.

2) Support equipment, if needed, was placed as per ANSI C63.4: 1992.

3) All I/O cables were positioned to simulate typical actual usage as per ANSI C63.4: 1992.

4) The EUT received 115VAC/60Hz power source from the outlet socket under the turntable. All support equipment received 110VAC/60Hz power from another socket under the turntable.

5) The antenna was placed at some given distance away from the EUT as stated in ANSI C63.4: 1992. The antenna connected to the analyzer via a cable and at times a pre-amplifier would be used.

6) The analyzer quickly scanned from 30MHz to 1000MHz. Analyzer settings were stated on the Measuring Instrument Settings page. The EUT test program was started. Emissions were scanned and measured rotating the EUT to 360 degrees and positioning the antenna 1 to 4 meters above the ground plane, in both the vertical and the horizontal polarization, to maximize the emission reading level.

7) The following test mode(s) were scanned during the preliminary test:
Mode(s):

1. EUT running at video resolution: 640x480 (60Hz)
2. EUT running at video resolution: 1024 x 768 (70Hz)
3. EUT running at video resolution: 1024 x 768 (75Hz)

8) After the preliminary scan, we found the following test mode(s) producing the highest emission level.
Mode: 3

Then, the EUT and cable configuration, antenna position, polarization and turntable position of the above highest emission level were recorded for reference of final testing.

MEASUREMENT PROCEDURE (FINAL RAIDATED EMISSION TEST)

- 1) EUT and support equipment were set up on the turntable as per step 8 of the preliminary test.
- 2) The analyzer scanned from 30MHz to 1000MHz. Emissions were scanned and measured rotating the EUT to 360 degrees, varying cable placement and positioning the antenna 1 to 4 meters above the ground plane, in both the vertical and the horizontal polarization, to maximize the emission reading level.
- 3) Recorded at least the six highest emissions. Emission frequency, amplitude, antenna position, polarization and turntable position were recorded into a computer in which correction factors were used to calculate the emission level and compare reading to the applicable limit. If EUT emission level was less -2dB to the limit in peak mode, then the emission signal was re-checked using a Quasi-Peak detector, and only Q.P. reading will record in this report.
- 4) The test data of the worst case condition(s) was reported on the Summary Data page.

Data Sample:

Freq.	Raw	Corr.	Emiss.	Limits	Margin	Det	Ant.	Turn
(MHz)	Data	Factor	Level	(dBuV/m)	(dB)	ector	Heig.	Table
()	(dB)	(dBuV)	()	()	()	()	(cm)	()
xx.xx	14.0	11.2	26.2	30	-3.8	Peak	102	17

Freq. = Emission frequency in MHz
 Raw Data (dB) = Uncorrected Analyzer / Receiver reading
 Corr. Factor (dBuV) = Correction factors of antenna factor and cable loss
 Emiss. Level = Raw reading converted to dBuV and CF added
 Limit dBuV/m = Limit stated in standard
 Margin dB = Reading in reference to limit
 Detector = Detector function (Peak, Q.P.)
 Antenna Height = Antenna height above ground plane
 Turn Table = EUT placement in reference to antenna

RADIATED EMISSION LIMIT

Frequency (MHz)	Distance (m)	Maximum Field Strength Limit (dBuV/m/Q.P.)
30-230	10	30
230-1000	10	37

Note: The lower limit shall apply at the transition frequency.

Accredited Lab. of NEMKO, A2LA
Listed Lab. of FCC, VCC, MOC

A2LA Certificate #: 824.01 (for Emission)
NEMKO Authorization #: ELA 124 (for EMC)

Model Number: L-50T Location: Site # 3

Tested by: Clare Chou Polar: Vertical – 10m

Test Mode: EUT running at video resolution: 1024x768 (75Hz)

Test Results: Passed

Temperature: 26°C Humidity: 58%RH

(The chart below shows the highest readings taken from the final data)

Freq. (MHz)	Raw Data (dB)	Corr. Factor (dBuV)	Emiss. Level (dBuV/m)	Limits	Margin (dB)	Det ector	Ant. Heig. (cm)	Turn Table (°)
153.10	12.7	14.0	26.7	30.0	-3.3	Pk	100.0	230.0
156.93	13.1	13.8	26.9	30.0	-3.1	Pk	100.0	203.6
195.14	12.7	12.5	25.2	30.0	-4.8	Pk	100.0	67.0
216.59	11.1	13.7	24.8	30.0	-5.2	Pk	100.0	91.1

Gentlemen,

Federal Communications Commission
Authorization and Evaluation Division
7435 Oakland Mills Road
Columbia, MD 21046
U.S.A

We the undersigned, hereby authorized C&C Laboratory, Taiwan to act on our behalf in all matters relating to applications for equipment authorizations, including the signing of all documents relating to these matters. Any and all acts carried out by C&C Laboratory, Taiwan on our behalf shall have the same effect as acts of our own.

The applicant certifies that, in the case of an individual applicant is not subject to a denial of federal benefits, that includes FCC benefits, pursuant to Section 5301 of the Anti-Drug Abuse Act of 1988, 21 U.S.C. 853 (a) , in the case of a non-individual applicant (e.g. corporation, partnership or other unincorporated association) , no party to the application is subject to a denial of federal benefits, that includes FCC benefits, pursuant to that section.

Sincerely yours,

J. Y. JAN / Assistant Manager

LETTER OF MODIFICATION

Accredited Lab. of NEMKO, AZLA
Listed Lab. of FCC, VCC, MOC

AZLA Certificate #: 824.01 (for Emission)
NEMKO Authorization #: ELA 124 (for EMC)

APPENDIX 7

TEST EQUIPMENT

Accredited Lab. of NEMKO, A2LA
Listed Lab. of FCC, VCC, MOC

A2LA Certificate #: 824.01 (for Emission)
NEMKO Authorization #: ELA 124 (for EMC)

UNITS OF MEASUREMENT

Measurements of radiated interference are reported in terms of dBuV/m, at a specified distance. The indicated readings on the spectrum analyzer are converted to dBuV/m by use of appropriate conversion factors. Measurements of conducted interference are reported in terms of dBuV.

Note: All readings on data pages are taken with the detector in peak mode unless otherwise stated.

TEST TYPE	DETECTOR	FREQUENCY RANGE	RESOLUTION BANDWIDTH	VIDEO BANDWIDTH
Conducted	Peak/QP/Avg	150kHz-30MHz	9kHz	9kHz
Radiated	Peak	30MHz-1GHz	100kHz	100kHz
Radiated	QP	30MHz-1GHz	120kHz	120kHz
Radiated	Peak/Avg	Above 1GHz	1MHz	1MHz

MEASURING INSTRUMENT SETTING

TEST EQUIPMENT LIST

Instrumentation: The following list contains equipment used at C & C Laboratory, Co., Ltd. for testing. The equipment conforms to the American National Standard Specifications for Electromagnetic Interference and Field Strength Instrumentation from 10KHz to 2GHz.

Equipment used during the tests:

Open Area Test Site: ☐ # 1; ☒ # 3

Open Area Test Site # 1					
EQUIPMENT	* MFR	MODEL	SERIAL	LAST	CAL. DUE
Spectrum Analyzer	ADVANTEST	R3261A	71720234	05/02/1998	05/02/1999
