SECTION 3: Test specification, procedures & results

3.1 Test Specification

Test Specification : FCC Part 15 Subpart C: 2014, final revised on May 1, 2014 and effective June 2, 2014

Title : FCC 47CFR Part15 Radio Frequency Device Subpart C Intentional Radiators
Section 15.207 Conducted Emission
Section 15.209 Radiated emission limits, general requirements

* The revision on May 1, 2014 does not affect the test specification applied to the EUT.

FCC 15.31 (e)

This test was performed with the New Battery (DC 12V) and the constant voltage was supplied to this EUT during the tests. Therefore, this EUT complies with the requirement.

FCC Part 15.203 Antenna requirement

It is impossible for end users to replace the antenna, because the antenna is mounted inside of the vehicle. Therefore, the equipment complies with the antenna requirement of Section 15.203.

Refer to APPENDIX.

SECTION 4: Operation of E.U.T. during testing

4.1 Operating Modes

Mode	Remarks
(1) Transmitting mode (Tx) Ant1 Output current 1000mA	*1)
(2) Transmitting mode (Tx) Ant3 Output current 1000mA	*1)

*For reference, fundamental level was measured with Ant1 and Ant3, output current 50mA.

*1) The test was performed with one representative antenna on continuous transmitting mode.
This transmission timing was worse than the one using six antennas of normal use.

4.2 Configuration and peripherals

* For two Antenna ports (Port type1 and Port type2), it was checked that there was no difference between the ports, and then one representative port was evaluated.

Also, the number of connected antennas was no difference within this confirmation, although it was confirmed that some antennas would be added.

* Cabling and setup were taken into consideration and test data was taken under worse case conditions.

SECTION 5: Radiated emission (Fundamental and Spurious Emission)

Test Procedure

The Radiated Electric Field Strength intensity has been measured on No. 1 semi anechoic chamber with a ground plane and at a distance of 10m.

Frequency : From 9kHz to 30MHz at distance 10m

The EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity.

The measurements were performed for vertical polarization (antenna angle: 0deg., 45deg., 90deg., and 135 deg.) and horizontal polarization.

*Refer to Figure 1 about Direction of the Loop Antenna.

Frequency : From 30MHz to 1GHz at distance 3m

The measuring antenna height varied between 1 and 4m and EUT was rotated a full revolution in order to obtain the maximum value of the electric field intensity.

The measurements were performed for both vertical and horizontal antenna polarization.

Measurements were performed with a QP and PK detector.

The radiated emission measurements were made with the following detector function of the test receiver.

	From 9kHz to 90kHz and From 110kHz to 150kHz	From 90kHz to 110kHz	From 150kHz to 490kHz	From 490kHz to 30MHz	From 30MHz to 1GHz	From 1GHz to 2GHz	
Detector Type	PK/AV	QP	PK/AV	QP	QP	-	-
IF Bandwidth	200Hz	200Hz	9kHz	9kHz	120kHz	-	-
Distance factor *1)	-59.1dB	-59.1dB	-59.1dB	-19.1dB	-	-	-

*1) -59.1dB = $40 \times \log(10\text{m}/300\text{m})$

-19.1dB = $40 \times \log(10\text{m}/30\text{m})$

- The carrier level (or, noise levels) was (or were) measured at each position of all three axes X, Y and Z, and the position that has the maximum noise was determined.

With the position, the noise levels of all the frequencies were measured.

The expiration date of the calibration is the end of the expired month.

All equipment is calibrated with valid calibrations. Each measurement data is traceable to the national or international standards.

As for some calibrations performed after the tested dates, those test equipment have been controlled by means of an unbroken chains of calibrations.
