SUMITUBE A SPECIFICATION1. Scope

This specification covers SUMITUBE A.

2. Feature

This product is irradiated cross-linked, thermally-stabilized, flexible polyolefin heat-shrinkable tubing.

3. Colors

Black, Brown, Red, Orange, Yellow, Green, Blue, Gray, White and Clear
Colors conform to SUMITOMO's standard.

4. Sizes

Sizes are specified in Table 1.

5. Properties

Properties are specified in Table 2.

6. Test method6-1. Inside diameter

Inside diameter shall be measured by using a gage rod or a taper gage.

In case of using a gage rod---- Read the value of the maximum gage rod which passes freely into the tubing without expanding the wall of tubing.

In case of using a taper gage-- Read the value on the gage when tubing isn't expanded by insertion and there is no visible space between the end of tubing and the taper gage.

6-2. Wall thickness

Wall thickness shall be measured by a pin-dial gage or a micrometer at several points.

6-3. Shrinkable condition

Tubing shall be fully recovered at 125°C for 1 minute in an oil bath.

SA 規格書 3/5

RE4-0180C

6-4. Longitudinal change

Tubing shall be cut into about 100 mm lengths and measured.
After full recovery, the length shall be remeasured and the
longitudinal change shall be calculated from the following formula:

$$\text{Longitudinal change(\%)} = \frac{\text{Length after full recovery} - \text{Initial length}}{\text{Initial length}} \times 100$$

6-5. Properties

Test methods conform to JIS-C-2133.

E-FLEX CONDUCTIVE TAPE

The unique E-FLEX conductive Tape combines highly conductive copper and corrosion resistant nickel technology to achieve a light weight, strong, flexible, and high-tack conductive adhesive tape.

E-FLEX tape is smooth, soft-edged and non-cracking. It also provides total uniform coverage, even on uneven surfaces.

E-FLEX high quality flexible conductive Nickel/Copper(Ni/Cu) tape offers excellent surface conductivity, shielding effectiveness, and reflectivity for a variety of applications to protect against EMI/RFI.

GENERAL CHARACTERISTICS:

- ① Shielding Effectiveness: At Far-field plane wave 30-2000MHz, norm value S.E. = 88dB attenuation
- ② conductivity: Surface resistance $R_s = 0.08 \Omega / \square$, applied with 2 kg of vertical force
- ③ Antistatic Property: Highly conductive PET providing electrostatic discharge path
- ④ Weight: 120 g/m². Plated Cu = 18g/m². Plated Ni = 7g/m²
- ⑤ Operating Temperature: 104-122 °F (40-50 °C) in continuous operation. Max. short exposure 401 °F (205 °C) without high-tack adhesive
