Equipment Under Test (EUT) : Lifescan USB Interface Cable
Model No. : 200-102-01
Serial No. : 17
Manufacturer : M/s. HCL Peripherals, Chennai
Tested on : 17th March, 03
Testing location : SAMEER – Centre for Electromagnetics
2nd Corss Road, CIT Campus, Taramani
Chennai – 600 113 INDIA

Test Instrumentation:

Description	Make	Model number	Serial number	Cal. Due date
EMI Receiver	R&S	ESAI-D	825316/004	03/02/04
	R&S	ESAI-RF	863791/009	03/02/04
Biconical Antenna	R&S	HK116	825329/007	24/01/04
Log Periodic Antenna	Electrometrics	LPA 25	1463	10/01/04
EMI Receiver	R&S	ESCS 30	100063	23/08/03
Line Impedance Stabilization Network (LISN)	R&S	ESH2-Z5	893606/023	27/07/04

Applicable Standard:

FCC, class B part 15,1998. The test procedures are followed as given in the standard ANSI C63.4 1992, EIA/TIA 603, and MP-5.

The EMI test receiver (make R&S)(model: ESAI) was used for measuring radiated emission from EUT. The receiver is a sophisticated instrument to specifically carry out EMC measurements. Transducer table settings are available to enter the cable loss & antenna factor in the receiver to get the field strength (dB? V/m) values from the display. So manual calculation is not necessary.

For example:

$$E \text{ (dB? V/m)} = V \text{ (dB? V)} + AF \text{-----Eq.1}$$

Where

E (dB? V/m) = Field strength

V (dB? V) = receiver two terminal voltage

AF = Antenna factor

1. CONDUCTED EMISSION TEST**1.1 EUT Configuration:**

The life scan USB interface cable (EUT) was connected to the Laptop and other end with 3 pins stereo Phone Plug (to be connected to a meter) was shorted to communicate with the PC. See in Annexure-1

1.2 Test Frequency and limits:

Frequency (Mhz)	Quasi Peak Limits (dB? V)
0.45-30.0	48

1.3 Test Procedure:

The RF conducted emissions from the EUT sent back to the power lines were measured using LISN and EMI receiver. The measurement was done in Peak detection mode. Since the emission level was within the limit in peak mode, measurement was not done in Quasipeak detection mode. Few Qp values attached for reference along with plots.

1.4 Test Observations:

It was observed that the Conducted Emission from the EUT was within the FCC limits in the test frequency range of 450KHz-30MHz. 9KHz Bandwidth used for measurements.

1.5 Enclosed Documents:

Plot 1A&B shows conducted emissions from the EUT on Line.

Plot 1C&D shows conductd emissions from the EUT on Neutral.

Aattachments shows the photograph of EUT & Conducted Emission test Setup

2. RADIATED EMISSION TEST**2.1 EUT Configuration:**

The life scan USB interface cable (EUT) was connected to the Laptop and other end with 3 pins stereo Phone Plug (to be connected to a meter) was shorted to communicate with the PC.

2.2 Test Frequency Range and Limits at 10 meter Distance:

Frequency (MHz)	Emission Limits (dB μ V)
30-88	29.55
88-216	33.05
216-960	35.55
960-1000	43.55

2.3 Test Procedure:

(I) The Radiated Emission (RE) from the EUT was first measured in anechoic chamber at 3-meter distance for both horizontal and vertical polarization and antenna height was varied to maximize the emission. Logperiodic antenna model LPA 25 and Biconical antenna HK116 were used for Radiated emission measurements. The manipulation cables were done to identify maximum emissions in the frequency range of 30 Mhz – 1000Mhz to identify any emission from the EUT. 120KHz bandwidth used for measurements.

The above measurement was done in two steps.

Step 1: Laptop with subsystems in powered condition.

Step2: Laptop with subsystems plus EUT (Life scan USB interface cable) in powered condition.

The frequencies of appreciable emission were identified and recorded

(II) The above RE measurement procedure was repeated at OATS (Open Area Test Site) at 10 m distance as required by FCC standard for those tests frequencies with appreciable emission. Measurement was carried out for both horizontal and vertical polarization and antenna height was varied to maximize the emission. The manipulation cables were done to identify maximum emissions. The photograph shows the maximum emission condition.

2.4 Test Observations:

The Radiated Emission (RE) was within the FCC limit. This was observed in Anchoic chamber with peak detection mode as well as in OATS for the test frequency range of 30-1000Mhz. As the emission from the EUT was below the FCC limit, the measurements plots take in the anechoic chamber were enclosed for ready reference. Table RE-1 and RE-2 shows few emission values.

2.7 Enclosed Documents:

Plot 2A&2B shows radiated emission due to ambient (Laptop ON) for the frequency range 30MHz-230Mhz.

Plot 2C & 2D shows radiated emission due to ambient (Laptop ON) for the frequency range 230Mhz – 1000Mhz

Plot 3A&B shows radiated emissions from the entire setup as shown in Annexure-1 for the frequency range 30-230Mhz

Plot 3C & D shows radiated emissions from the entire setup as shown in Annexure –1 for the frequency range 230-1000Mhz
