4. Reliability

No.	Test Item	Test Condition	Decision
4.1	Leaving under high temperature & high humidity	Leave 24 hours under condition of $65 \pm 3^\circ\text{C}$ and 90~95%RH	Normal operation without change after testing
4.2	Leaving under low temperature	Leave 24 hours under condition of $-20 \pm 3^\circ\text{C}$	The same as above
4.3	Operating high temperature	Operate 6 hours under condition of $45 \pm 3^\circ\text{C}$	The same as above
4.4	Operating low temperature	Operate 6 hours under condition of $0 \pm 3^\circ\text{C}$	The same as above
4.5	Temperature cycle	Repeat 5 times the cycle specified with the following graph under saving mode	The same as above
4.6	Static noise against pressure	Based on the way of radiation: condenser 200pF and resistance 500Ω (Do not cover the terminal of connector)	No wrong operation under 8kV, and not be destroyed under 2kV

Condition Leave more than 30 minutes under the following condition, and measure the values under the same condition.
 Temperature $25 \pm 1^\circ\text{C}$ Humidity 40~70%RH Pressure 650~850mmHg

4.7 Status of using such materials that may destroy the ozone layer.
 Do not use materials for regulation (Specified chlorofluorocarbon, Halon, CCL₄, 1, 1, 1, Trichloroethane)
