

Report Date: 21 July 2003

Customer P.O.: 1T893500, 1T899200 & 1T899201

Test Period: 27 May through 19 June 2003

Security Classification: NA

TEST REPORT

FOR

ENVIRONMENTAL TESTING OF THE P/N AISA1-000-01 AUTOMATIC INFORMATION SYSTEM

TESTING PERFORMED BY:

FOR:

QUALTEST, INC.5325 Old Winter Garden Road
Orlando, Florida 32811-1520**L3 COMMUNICATIONS**6000 Fruitville Road
Sarasota, FL 34232-6499Website: www.qualtest.com

TEST REPORT PREPARED BY:

Mary Webb, Technical Documentation Specialist

APPROVED BY:

Todd Scarborough, General Manager

QUALITY ASSURANCE:

Mike McCord, Quality Assurance Manager

being duly sworn, deposes and says that the information contained in this report is the result of complete and carefully conducted tests and is to the best of his knowledge true and correct in all respects. Subscribed and sworn to before me,

"CQA Performed IAW One Book"

Not Required

Bill Kennedy, DCM Orlando QAS, S1002A

Susan Kingdon Fields, Notary Public in and for the State of Florida at large, this21st day of July, 2003.

State of Florida, County of Orange

Susan Kingdon Fields

My Commission CC865940

Expires August 24, 2003

Qualtest shall have no liability for damages of any kind to person or property, including special or consequential damages, covered by this report. This test report shall not be reproduced except in full, without the written approval of Qualtest.

REPORT REVISION RECORD**REVISION DESCRIPTION OF CHANGE****INITIAL RELEASE**

- A Per Peggy Browning, L3 Communications, telephone conversation on 08 July 2003, the following Sections were BETA testing and not considered relevant to the test program:
- Section 1 (Dry Heat Storage)\
 - Section 2 (Dry Heat Functional)
 - Section 3 (Damp Heat Storage)
 - Section 4 (Low Temperature Functional)
 - Section 6 (Dry Heat Functional Retest)
 - Section 7 (Low Temperature Functional Retest 2)
 - Section 11 (Sinusoidal Vibration)
- The Sections were removed from the test report and the remaining Sections were sequentially renumbered, reformatted and edited to improve presentation.
- Improperly titled Section 2 (formerly Section 9) was changed from “Dry Heat Storage” to “Dry Heat Functional” and all related information corrected to reflect the change.
- The original Enclosure I containing the customer provided data was deleted and the data distributed among Enclosures appropriate to each test Section. Specifically, Enclosure I was added to Section 1, Enclosure II was added to Section 2, Enclosure III was added to Section 3, and Enclosure IV was added to Section 4. Customer supplied additional Enclosure data titles for clarity.
- Section 1 and Section 2 Low Temperature Functional tests were combined into one section for clarity.

FOREWORD

The objective of this test program was to subject customer provided test hardware to environmental simulation in compliance with customer stated specifications, including any authorized modifications, deviations or concessions to the original requirements. Test hardware consisted of items identified in the appropriate sections of this report. In addition to test hardware identification, each section contains information that describes the associated test setup and performance, and the resulting data. Qualtest measuring instruments used in testing were calibrated according to the requirements of ANSI/NCSL Z540-1-1994 and are NIST traceable. Calibration records are on file and available for inspection by request. Because the test methods are well established and are qualitative or semi-quantitative in nature, Qualtest does not apply measurement uncertainty unless obligated by contract. Measured value related to the corresponding tolerance requirement is used to decide whether a test meets the requirements of the specification. Any test hardware operational setups and resulting evaluations or inspections performed by the customer are not included in this report, unless they were explicitly requested. While observations and/or specification compliance statements may be reported, no interpretations or opinions regarding customer product performance are intended. Unless otherwise indicated in the appropriate report section, all contract obligations were met and the test objective achieved.

SECTION 1**LOW TEMPERATURE FUNCTIONAL TEST SUMMARY**

Test Start-Finish Dates: 05 through 13 June 2003

Responsible Test Technician: David Carpenter

1-1 TEST HARDWARE

One (1) P/N AISA1-000-01 Automatic Identification System (AIS), S/N 000221933

2-1 TEST REQUIREMENTS

With the test hardware configured for operation, descend to $-20 \pm 3^{\circ}\text{C}$ at a rate $\leq 1^{\circ}\text{C}$ per minute and maintain this temperature for 10 to 16 hours. Once the customer has completed any operational requirements, raise the chamber temperature to $25 \pm 3^{\circ}\text{C}$ at a rate $\leq 1^{\circ}\text{C}$ per minute.

2.1-1 Test Specification:

Primary: Section 8.4.2 of CEI IEC 60945, Fourth Edition, 2002-08

Reference: L3 Communications "Certification Test Matrix for the Automatic Identification System Part Number AISA1-000-00" number 905-M0151-54, Rev. A

3-1 TEST SETUP**QUALTEST FURNISHED MEASUREMENT AND TEST EQUIPMENT**

QTI #	Item	Manufacturer	Model Number	Calibration Due
100037	Chart Recorder	Honeywell	DR45AT-1111-0	11/22/2003
100968	Temperature Chamber	Thermotron	FX-32-CHV-15-15	NA

CHART RECORDER SETUP

Channel	Function	Type of sensor
1	Monitor chamber air temperature	100 Ω Bulb

The test item was placed on a rack in the temperature chamber with power cables routed through a porthole to customer support equipment located outside the chamber (Reference Figures 1-1 and 2-1).

4-1 TEST DESCRIPTION

4.1-1 Laboratory Ambient Conditions:

Temperature (°C): NA
Relative Humidity (%): NA
Atmospheric Pressure: Site Ambient

4.2-1 Non-Qualtest Personnel, Including Organization, Present for All or Part of the Test:

Sagar G. Dastidar, a representative from L3 Communications, was present for June 5 and 6 testing. Todd White, a representative from L3 Communications, was present for June 12 and 13 testing.

4.3-1 Powered/Operational State of the Hardware and by Whom:

Test item operation and functional testing was conducted by Sagar G. Dastidar and Todd White, L3 Communications. David Carpenter, Qualtest test technician, periodically observed functional test activities and was provided test data on digital media by the customer.

4.4-1 Test Activities and Resulting Measurements from Observed/Recorded Data:

Run #	Start Date/Time	End Date/Time	Test Duration
1	06/05/03 at 1226	06/06/03 at 0542	17-hours 16-minutes

In order for the customer to complete functional testing at temperature, the test item was held at $-20\pm3^{\circ}\text{C}$ beyond the specified 16 hours (total time at temperature of 17 hours 16 minutes).

Run #	Start Date/Time	End Date/Time	Duration of Soak
2	06/12/03 at 2045	06/13/03 at 1745	21-hours

In order for the customer to complete functional testing at temperature, the test item was held at $-20\pm3^{\circ}\text{C}$ beyond the specified 16 hours (total time at temperature of 21 hours).

5-1 ENVIRONMENTAL TEST DATA

No anomalies were observed. Chart recorder temperature data are located after Figure 2-1.

Screenshots related to the functional testing performed by the customer are presented in Enclosure I.

Figure 1-1. Typical chamber test setup for low temperature functional.

Figure 2-1. Typical overall test setup for low temperature functional.

Customer Note: The Low Temperature test was interrupted due to a loose internal cable. The unit was returned to L3 for repair and teting resumed.

ENCLOSURE I**L3 COMMUNICATIONS AUTOMATIC IDENTIFICATION SYSTEM (AIS) SCREEN SHOTS****FOR THE****LOW TEMPERATURE FUNCTIONAL TEST****PREFACE**

These data are the results of the IEC 60945 required Performance Checks and Performance Tests conducted by L3 Communications personnel. Specifically, Performance Test Sections 15.1.1, 15.1.2, 15.2.1, and 15.4.1 were conducted by Sagar G. Dastidar, L3 Communications. Performance Test Sections 15.3.1, 15.3.2 and the Performance Check were conducted by Todd White, L3 Communications. Customer data was supplied to Qualtest in Microsoft Word format on digital media, which was inserted into this Enclosure unaltered, including the descriptions with the accompanying graphics.

Criteria Statement

L3 Communications used the following criteria for Performance Checks and Performance Tests

Performance Check**Criteria for Pass**

- 1) IEC 61993-2 Paragraph 14.1.1.1 -Transmit Position Reports needs to be every 2 +/- 0.3 seconds.
- 2) IEC 61993-2 Paragraph 14.1.1.2 -Receipt Position Reports needs to be continuous for the duration of the test. No unmatched messages indicate successful continuous reception.

Performance Tests**Criteria for Pass**

- 1) IEC 61993-2 Paragraph 15.1.1 – The frequency error shall not exceed $\pm 1\text{kHz}$ measured at +30% power under Dry Heat and –10% power under Low Temperature.
- 2) IEC 61993-2 Paragraph 15.1.2 – The carrier power (conducted) shall be within +2.0dB and -3.0dB of the rated output power measured at +30% power under Dry Heat and –10% power under Low Temperature.
- 3) IEC 61993-2 Paragraph 15.2.1 - The B and Y state frequencies measured at +30% power under Dry Heat and –10% power under Low Temperature shall be within $\pm 1\%$.
- 4) IEC 61993-2 Paragraph 15.3.1 – The sensitivity shall be –101dBm when measured at +30% power under Dry Heat and –10% power under Low Temperature with a PER of 20%.
- 5) IEC 61993-2 Paragraph 15.3.2 - The sensitivity shall be –92dBm when measured at +30% power under Dry Heat and –10% power under Low Temperature with a PER of 20%.
- 6) IEC 61993-2 Paragraph 15.4.1 – The maximum usable sensitivity shall not be less sensitive than –101dBm when measured at +30% power under Dry Heat and –10% power under Low Temperature.

LOW TEMPERATURE FUNCTIONAL TEST (SECTION 8.4.2 OF IEC 60945)

Transmit Frequency Error, Setup Screen, Section 15.1.1, Channel 156.025

The 'Configure AIS' dialog box for Channel 156.025 contains the following settings:

Field	Value
AIS Port Number	106
New MMSI	1
Power Level	Low
Test mode	☐
Enable	Button
Disable	Button
New Channel Numbers	
RX Channel A	2088
RX Channel B	1060
TX Channel	1060
Mode	CW

Buttons: Close, Configure

Transmit Frequency Error, Setup Screen, Section 15.1.1, Channel 162.025

The 'Configure AIS' dialog box for Channel 162.025 contains the following settings:

Field	Value
AIS Port Number	106
New MMSI	1
Power Level	High
Test mode	☐
Enable	Button
Disable	Button
New Channel Numbers	
RX Channel A	1060
RX Channel B	2088
TX Channel	2088
Mode	CW

Buttons: Close, Configure

Transmit Frequency Error, Setup Screen, Section 15.1.1, Channel 157.4125

Configure AIS

AIS Port Number: 106 New MMSI: 1 Power Level: High ☐ Test mode

Enable Disable

New Channel Numbers:

RX Channel A: 2260 RX Channel B: 1228 TX Channel: 1228 Mode: CW

Close Configure

Transmit Frequency Error, Setup Screen, Section 15.1.1, Channel 160.6375

Configure AIS

AIS Port Number: 106 New MMSI: 1 Power Level: High ☐ Test mode

Enable Disable

New Channel Numbers:

RX Channel A: 1228 RX Channel B: 2260 TX Channel: 2260 Mode: CW

Close Configure

Transmit Frequency Error, Test Results, Section 15.1.1

Frequency Error Test

Test Equipment Required:

- Frequency Counter
- 30db Attenuator (Black & Green)

Cal Due: 5-21-09

Setup Instructions:

- See Photo(s):

Procedure:

- Connect Frequency Counter to EUT through Attenuator
- Apply power to the Frequency Counter and check for dashes
- Using the Configuration Tool, set EUT frequency to 1228
- Select Run mode
- Select "Stop/Single" to get the frequency
- Record frequency value: 157.41357 MHz
- Select Run mode
- Using the Configuration Tool, set EUT frequency to 2260
- Select "Stop/Single" to get the frequency
- Record frequency value: 160.637334 MHz
- Select Run mode
- Using the Configuration Tool, set EUT frequency to 1060
- Select "Stop/Single" to get the frequency
- Record frequency value: 156.020786 MHz
- Select Run mode
- Using the Configuration Tool, set EUT frequency to 2088
- Select "Stop/Single" to get the frequency
- Record frequency value: 162.025836 MHz

Transmit Carrier Power, Setup Screen, Section 15.1.2, Low Power

The 'Configure AIS' dialog box is shown with the following settings:

- AIS Port Number:** 106
- New MMSI:** 1
- Power Level:** Low (selected from a dropdown menu)
- Test mode:** ☐ (unchecked)
- Enable/Disable buttons:** Both are disabled (greyed out).
- New Channel Numbers:**
 - RX Channel A:** 1060
 - RX Channel B:** 2088
 - TX Channel:** 1060
- Mode:** CW (selected from a dropdown menu)
- Buttons:** Close and Configure.

Transmit Carrier Power, Setup Screen, Section 15.1.2, High Power

The 'Configure AIS' dialog box is shown with the following settings:

- AIS Port Number:** 106
- New MMSI:** 1
- Power Level:** High (selected from a dropdown menu)
- Test mode:** ☐ (unchecked)
- Enable/Disable buttons:** Both are disabled (greyed out).
- New Channel Numbers:**
 - RX Channel A:** 1060
 - RX Channel B:** 2088
 - TX Channel:** 1060
- Mode:** CW (selected from a dropdown menu)
- Buttons:** Close and Configure.

Transmit Carrier Power, Test Results, Section 15.1.2

Carrier Power Test

Test Equipment Required:

- Power Meter
- Power Sensor
- Black Attenuator (Number matches Power Sensor connector)

Cal Due: 5.22.04

Setup Instructions:

- See Photo(s):

Procedure:

- Connect black attenuator to power sensor with same SN
- Connect Power Sensor cable to Power Meter
- Place Power Meter into DBM mode (DBM/W button → Select on right of screen)
- Using the Configuration Tool, set EUT the following:
 - Rx1 = 1070
 - Rx2 = 1070
 - Tx = 1070
 - Power = High
 - Mode = CW
- Record value: +10.81 dbm
+11 dBm (+/- 3 dB)
- Using the Configuration Tool, set EUT the following:
 - Rx1 = 1070
 - Rx2 = 1070
 - Tx = 1070
 - Power = Low
 - Mode = CW
- Record value: +2.765 dbm
+3 dBm (+/- 3 dB)

Transmitter Frequency Error (DSC), Setup Screen, Section 15.2.1, B State

The 'Configure AIS' dialog box for the B State shows the following configuration:

Field	Value
AIS Port Number	106
New MMSI	1
Power Level	High
Test mode	☐
Enable	Button
Disable	Button
New Channel Numbers	
RX Channel A	1060
RX Channel B	1060
TX Channel	1070
Mode	D21

Buttons: Close, Configure

Transmitter Frequency Error (DSC), Setup Screen, Section 15.2.1, Y State

The 'Configure AIS' dialog box for the Y State shows the following configuration:

Field	Value
AIS Port Number	6
New MMSI	1
Power Level	Low
Test mode	☐
Enable	Button
Disable	Button
New Channel Numbers	
RX Channel A	1070
RX Channel B	1070
TX Channel	1070
Mode	D13

Buttons: Close, Configure

Transmitter Frequency Error (DSC), Test Results, Section 15.2.1

DSC Frequency Error

Test Equipment Required:

- Marconi (Tx Mode) Receiving Signal
- Frequency Counter
- 30db Attenuator (Black & Green)

Cal Due: 10.03.03Cal Due: 5.22.04

Setup Instructions:

See Photo(s):

Procedure:

- Connect attenuator to Marconi (right input - look for light)
- Select Tx Button (Blue - Mode)
- Select Low Pass Filter (Under AF Filters)
- Connect Frequency Counter to DE Mod Out on back of Marconi
- Select Run on frequency counter
- Using the Configuration Tool, set EUT the following:
 - Rx1 = 1070
 - Rx2 = 1070
 - Tx = 1070
 - Power = High
 - Mode = D13
- Select "Stop/Single" on Frequency Counter
- Record value: 1301.320661 Hz
1300 Hz (+/- 13 Hz)
- Select Run on frequency counter
- Using the Configuration Tool, set EUT the following:
 - Rx1 = 1070
 - Rx2 = 1070
 - Tx = 1070
 - Power = High
 - Mode = D21
- Select "Stop/Single" on Frequency Counter
- Record value: 2111.5683 Hz
2100 Hz (+/- 21 Hz)

Receiver Sensitivity, Setup Screen, Section 15.3.1, 25kHz Channel 162.025

The screenshot shows the 'Configure AIS' dialog box. The 'AIS Port Number' field contains the value '106'. The 'New MMSI' field is empty. The 'Power Level' field is a dropdown menu. To the right, there is a checkbox for 'Test mode' which is unchecked, and two buttons labeled 'Enable' and 'Disable'. Below these, there is a section titled 'New Channel Numbers' containing three input fields: 'RX Channel A' with '2088', 'RX Channel B' with '2088', and 'TX Channel' with '2088'. To the right of this section is a 'Mode' dropdown menu. At the bottom of the dialog are two buttons: 'Close' and 'Configure'.

This screenshot is identical to the one above, but the 'AIS Port Number' field now contains the value '107'. All other fields and controls remain the same.

Due to a problem in the testing software, only 250 messages could be sent during a single run. Therefore, the sensitivity test software was run in 4 consecutive executions.

Receiver Sensitivity, Test Results, Section 15.3.2, 12.5kHz Channel 157.4125

Run 3

Run 4

Receiver Sensitivity, Setup Screens, Section 15.3.2, 12.5kHz Channel 160.6375

The 'Configure AIS' dialog box contains the following fields and controls:

- AIS Port Number:** Text box containing '107'.
- New MMSI:** Empty text box.
- Power Level:** Dropdown menu.
- Test mode:** Unchecked checkbox.
- Enable/Disable:** Two buttons.
- New Channel Numbers:** A group box containing:
 - RX Channel A:** Text box containing '2260'.
 - RX Channel B:** Text box containing '2260'.
 - TX Channel:** Text box containing '2260'.
- Mode:** Dropdown menu.
- Close/Configure:** Two buttons at the bottom.

The 'Configure AIS' dialog box contains the following fields and controls:

- AIS Port Number:** Text box containing '106'.
- New MMSI:** Empty text box.
- Power Level:** Dropdown menu.
- Test mode:** Unchecked checkbox.
- Enable/Disable:** Two buttons.
- New Channel Numbers:** A group box containing:
 - RX Channel A:** Text box containing '2260'.
 - RX Channel B:** Text box containing '2260'.
 - TX Channel:** Text box containing '2260'.
- Mode:** Dropdown menu.
- Close/Configure:** Two buttons at the bottom.

Due to a problem in the testing software, only 250 messages could be sent during a single run. Therefore, the sensitivity test software was run in 4 consecutive executions.

Receiver Sensitivity, Test Results, Section 15.3.2, 12.5kHz Channel 160.6375

Run 1

Run 2

Receiver Sensitivity, Test Results, Section 15.3.2, 12.5kHz Channel 160.6375

Run 3

Run 4

Receiver Sensitivity (DSC), Section 15.4.1

DSC Sensitivity

Test Equipment Required:

- UAIS Test Equipment (TE)
- Frequency Counter
- Logic Analyzer
- 30db Attenuator (Black & Green)
- Tuning Tool

Cal Due: 5.22.04
 Cal Due: 2.19.04

Setup Instructions:

See Photo(s):

Procedure:

Note: PC not needed for this test (only Logic Analyzer)

- Set variable attenuators to zero
- Replace TE RF cable with 100' Cable
- Take TE and Additional Power supply 100' away
- Using the MKD Test Mode, set TE the following:
 - Rx1 = 1070
 - Rx2 = 1070
 - Tx = 1070
 - Power = Low
 - Mode = D3 (Dot Pattern - 10101010)
- Apply power and begin TE transmission
- Connect Logic Analyzer pod (Ground, Clock & Data) to the BER Fixture
- LOGIC ANALYZER:
 - 1 Select CONFIGURATION screen
 - 2 Select Hard Disk
 - 3 Scroll down to AIS_BER2_C and Select Execute
 - 4 Select SYSTEM → 100/500 Hz L.A.C
 - 5 Select CONFIGURATION → Listing 1
(Make sure power is applied and TE is running)
 - 6 Select RUN on the Logic Analyzer
 - 7 Wait for program to STOP
 - 8 Place selector on position 0 and select PRINT → PRINT DISK
 - 9 Select NAME and name the file DSCSEN1
 - 10 Insert Floppy → Select Hard Disk → Flexible Disk → EXECUTE
 - 11 Using frequency counter, verify that the unit is at 156.525 Hz
 - 12 Record value: 156.525007 MHz

Perform same test with TE1 (156.5265 Hz)

Perform same test with TE1 (156.5235 Hz)

~~156.525007~~ 156.5264 MHz
 156.5233 MHz

Performance Check at Low Temperature

Receiver Test A

A screenshot of a software dialog box titled "Performance Check". It contains several input fields and buttons. The "How long to monitor messages?" field is set to "60" with the unit "Seconds". The "EUT MMSI" field is set to "1". The "EUT Serial" field is set to "000221933". There are two radio buttons under "Select Receiver Test": "Receiver Test A - EUT off | TE on" (selected) and "Receiver Test B - EUT on | TE off". There are "Start" and "Stop" buttons on the right side.

SECTION 2**DRY HEAT FUNCTIONAL TEST SUMMARY**

Test Start-Finish Dates: 13 through 14 June 2003

Responsible Test Technician: David Carpenter

1-2 TEST HARDWARE

One (1) P/N AISA1-000-01 Automatic Identification System (AIS), S/N 000221933

2-2 TEST REQUIREMENTS

With the test hardware configured for operation, ascend to $55\pm 3^{\circ}\text{C}$ at a rate $\leq 1^{\circ}\text{C}$ per minute and maintain this temperature for 10 to 16 hours. Once the customer has completed any operational requirements, lower the chamber temperature to $25\pm 3^{\circ}\text{C}$ at a rate $\leq 1^{\circ}\text{C}$ per minute.

2.1-2 Test Specification:

Primary: Section 8.2.2 of CEI IEC 60945, Fourth Edition, 2002-08

Reference: L3 Communications "Certification Test Matrix for the Automatic Identification System Part Number AISA1-000-00" number 905-M0151-54, Rev. A

3-2 TEST SETUP**QUALTEST FURNISHED MEASUREMENT AND TEST EQUIPMENT**

QTI #	Item	Manufacturer	Model Number	Calibration Due
100037	Chart Recorder	Honeywell	DR45AT-1111-0	11/22/2003
100968	Temperature Chamber	Thermotron	FX-32-CHV-15-15	NA

CHART RECORDER SETUP

Channel	Function	Type of sensor
1	Monitor chamber air temperature	100 Ω Bulb

The test item was placed on a rack in the temperature chamber with power cables routed through a porthole to customer support equipment located outside the chamber (Reference Figures 1-2 and 2-2).

4-2 TEST DESCRIPTION

4.1-2 Laboratory Ambient Conditions:

Temperature (°C): NA
Relative Humidity (%): NA
Atmospheric Pressure: Site Ambient

4.2-2 Non-Qualtest Personnel, Including Organization, Present for All or Part of the Test:

Todd White, a representative from L3 Communications

4.3-2 Powered/Operational State of the Hardware and by Whom:

Test item operation and functional testing was conducted by Todd White, L3 Communications. David Carpenter, Qualtest test technician, periodically observed functional test activities and was provided test data on digital media by the customer.

4.4-2 Test Activities and Resulting Measurements from Observed/Recorded Data:

Run #	Start Date/Time	End Date/Time	Duration of Soak
1	06/13/03 at 2024	06/14/03 at 1455	18-hours 31-minutes

In order for the customer to complete functional testing at temperature, the test item was held at $55\pm 3^{\circ}\text{C}$ beyond the specified 16 hours (total time at temperature of 18 hours 31 minutes).

5-2 ENVIRONMENTAL TEST DATA

No anomalies were observed. Chart recorder temperature data are located after Figure 2-2.

Screenshots related to the functional testing performed by the customer are presented in Enclosure II.

Figure 1-2. Typical chamber test setup for dry heat functional test.

Figure 2-2. Typical overall test setup for dry heat functional test.

ENCLOSURE II**L3 COMMUNICATIONS AUTOMATIC IDENTIFICATION SYSTEM (AIS) SCREEN SHOTS****FOR THE****DRY HEAT FUNCTIONAL TEST****PREFACE**

These data are the results of the IEC 60945 required Performance Checks and Performance Tests conducted by L3 Communications personnel. Customer data was supplied to Qualtest in Microsoft Word format on digital media, which was inserted into this Enclosure unaltered, including the descriptions with the accompanying graphics.

Criteria Statement

L3 Communications used the following criteria for Performance Checks and Performance Tests

Performance Check**Criteria for Pass**

- 1) IEC 61993-2 Paragraph 14.1.1.1 -Transmit Position Reports needs to be every 2 +/- 0.3 seconds.
- 2) IEC 61993-2 Paragraph 14.1.1.2 -Receipt Position Reports needs to be continuous for the duration of the test. No unmatched messages indicate successful continuous reception.

Performance Tests**Criteria for Pass**

- 1) IEC 61993-2 Paragraph 15.1.1 – The frequency error shall not exceed ± 1 kHz measured at +30% power under Dry Heat and –10% power under Low Temperature.
- 2) IEC 61993-2 Paragraph 15.1.2 – The carrier power (conducted) shall be within +2.0dB and -3.0dB of the rated output power measured at +30% power under Dry Heat and –10% power under Low Temperature.
- 3) IEC 61993-2 Paragraph 15.2.1 - The B and Y state frequencies measured at +30% power under Dry Heat and –10% power under Low Temperature shall be within $\pm 1\%$.
- 4) IEC 61993-2 Paragraph 15.3.1 – The sensitivity shall be –101dBm when measured at +30% power under Dry Heat and –10% power under Low Temperature with a PER of 20%.
- 5) IEC 61993-2 Paragraph 15.3.2 - The sensitivity shall be –92dBm when measured at +30% power under Dry Heat and –10% power under Low Temperature with a PER of 20%.
- 6) IEC 61993-2 Paragraph 15.4.1 – The maximum usable sensitivity shall not be less sensitive than -101dBm when measured at +30% power under Dry Heat and –10% power under Low Temperature.

DRY HEAT FUNCTIONAL TEST (SECTION 8.2.2 OF IEC 60945)

Transmit Frequency Error, Setup Screen, Section 15.1.1, Channel 156.025

The 'Configure AIS' dialog box for Channel 156.025 contains the following fields and controls:

- AIS Port Number:** Text box containing '107'.
- New MMSI:** Empty text box.
- Power Level:** Dropdown menu set to 'High'.
- Test mode:** Unchecked checkbox with 'Enable' and 'Disable' buttons.
- New Channel Numbers:**
 - RX Channel A:** Text box containing '1060'.
 - RX Channel B:** Text box containing '1060'.
 - TX Channel:** Text box containing '1060'.
- Mode:** Dropdown menu set to 'CW'.
- Buttons:** 'Close' and 'Configure' buttons at the bottom.

Transmit Frequency Error, Setup Screen, Section 15.1.1, Channel 162.025

The 'Configure AIS' dialog box for Channel 162.025 contains the following fields and controls:

- AIS Port Number:** Text box containing '107'.
- New MMSI:** Empty text box.
- Power Level:** Dropdown menu set to 'High'.
- Test mode:** Unchecked checkbox with 'Enable' and 'Disable' buttons.
- New Channel Numbers:**
 - RX Channel A:** Text box containing '2088'.
 - RX Channel B:** Text box containing '2088'.
 - TX Channel:** Text box containing '2088'.
- Mode:** Dropdown menu set to 'CW'.
- Buttons:** 'Close' and 'Configure' buttons at the bottom.

Transmit Frequency Error, Setup Screen, Section 15.1.1, Channel 157.4125

The 'Configure AIS' dialog box for Channel 157.4125 contains the following fields and controls:

- AIS Port Number:** Text box containing '107'.
- New MMSI:** Empty text box.
- Power Level:** Dropdown menu set to 'High'.
- Test mode:** Unchecked checkbox.
- Enable/Disable:** Two buttons.
- New Channel Numbers:** A group box containing:
 - RX Channel A:** Text box containing '1228'.
 - RX Channel B:** Text box containing '1228'.
 - TX Channel:** Text box containing '1228'.
- Mode:** Dropdown menu set to 'CW'.
- Close/Configure:** Two buttons at the bottom.

Transmit Frequency Error, Setup Screen, Section 15.1.1, Channel 160.6375

The 'Configure AIS' dialog box for Channel 160.6375 contains the following fields and controls:

- AIS Port Number:** Text box containing '107'.
- New MMSI:** Empty text box.
- Power Level:** Dropdown menu set to 'High'.
- Test mode:** Unchecked checkbox.
- Enable/Disable:** Two buttons.
- New Channel Numbers:** A group box containing:
 - RX Channel A:** Text box containing '2260'.
 - RX Channel B:** Text box containing '2260'.
 - TX Channel:** Text box containing '2260'.
- Mode:** Dropdown menu set to 'CW'.
- Close/Configure:** Two buttons at the bottom.

Transmit Frequency Error, Test Results, Section 15.1.1

Frequency Error Test

Test Equipment Required:

- Frequency Counter
- 30db Attenuator (Black & Green)

Cal Due: 5-22-04Setup Instructions: MODE = CW

- See Photo(s):

Procedure:

- Connect Frequency Counter to EUT through Attenuator
- Apply power to the Frequency Counter and check for dashes
- Using the Configuration Tool, set EUT frequency to 1228
- Select Run mode
- Select "Stop/Single" to get the frequency
- Record frequency value: 157.4127
- Select Run mode
- Using the Configuration Tool, set EUT frequency to 2260
- Select "Stop/Single" to get the frequency
- Record frequency value: 160.6378
- Select Run mode
- Using the Configuration Tool, set EUT frequency to 1060
- Select "Stop/Single" to get the frequency
- Record frequency value: 156.0252
- Select Run mode
- Using the Configuration Tool, set EUT frequency to 2088
- Select "Stop/Single" to get the frequency
- Record frequency value: 162.0253

Transmit Carrier Power, Setup Screen, Section 15.1.2, Low Power

The 'Configure AIS' dialog box is shown with the following settings:

- AIS Port Number:** 107
- New MMSI:** (empty)
- Power Level:** Low
- Test mode:** ☐ (unchecked)
- Enable/Disable:** Enable (highlighted), Disable
- New Channel Numbers:**
 - RX Channel A:** 1070
 - RX Channel B:** 1070
 - TX Channel:** 1070
- Mode:** CW
- Buttons:** Close, Configure

Transmit Carrier Power, Setup Screen, Section 15.1.2, High Power

The 'Configure AIS' dialog box is shown with the following settings:

- AIS Port Number:** 107
- New MMSI:** (empty)
- Power Level:** High
- Test mode:** ☐ (unchecked)
- Enable/Disable:** Enable, Disable (highlighted)
- New Channel Numbers:**
 - RX Channel A:** 1070
 - RX Channel B:** 1070
 - TX Channel:** 1070
- Mode:** CW
- Buttons:** Close, Configure

Transmit Carrier Power, Test Results, Section 15.1.2

Carrier Power Test

Test Equipment Required:

- Power Meter
- Power Sensor
- Black Attenuator (Number matches Power Sensor connector)

Cal Due: 5-22-04

Setup Instructions:

- See Photo(s):

Procedure:

- Connect black attenuator to power sensor with same SN
- Connect Power Sensor cable to Power Meter
- Place Power Meter into DBM mode (DBM/W button → Select on right of screen)
- Using the Configuration Tool, set EUT the following:
 - Rx1 = 1070
 - Rx2 = 1070
 - Tx = 1070
 - Power = High
 - Mode = CW
- Record value: 10.2 dBm
+1 dBm (+/- 3 dB)
- Using the Configuration Tool, set EUT the following:
 - Rx1 = 1070
 - Rx2 = 1070
 - Tx = 1070
 - Power = Low
 - Mode = CW
- Record value: 2.57 dBm
+3 dBm (+/- 3 dB)

Transmitter Frequency Error (DSC), Setup Screen, Section 15.2.1, B State

The 'Configure AIS' dialog box is shown with the following settings:

- AIS Port Number:** 107
- New MMSI:** (empty)
- Power Level:** High
- Test mode:** ☐ (unchecked)
- Enable/Disable buttons:** Both are disabled (greyed out).
- New Channel Numbers:**
 - RX Channel A:** 1070
 - RX Channel B:** 1070
 - TX Channel:** 1070
- Mode:** D13
- Buttons:** Close and Configure.

Transmitter Frequency Error (DSC), Setup Screen, Section 15.2.1, Y State

The 'Configure AIS' dialog box is shown with the following settings:

- AIS Port Number:** 107
- New MMSI:** (empty)
- Power Level:** High
- Test mode:** ☐ (unchecked)
- Enable/Disable buttons:** Both are disabled (greyed out).
- New Channel Numbers:**
 - RX Channel A:** 1070
 - RX Channel B:** 1070
 - TX Channel:** 1070
- Mode:** D21
- Buttons:** Close and Configure.

Transmitter Frequency Error (DSC), Test Results, Section 15.2.1

DSC Frequency Error

Test Equipment Required:

- Marconi (Tx Mode) Receiving Signal
 - Frequency Counter
 - 30db Attenuator (Black & Green)
- Cal Due: 10-3-03
Cal Due: 5-22-04

Setup Instructions:

See Photo(s):

Procedure:

- Connect attenuator to Marconi (right input - look for light)
- Select Tx Button (Blue - Mode)
- Select Low Pass Filter (Under AF Filters)
- Connect Frequency Counter to DE Mod Out on back of Marconi
- Select Run on frequency counter
- Using the Configuration Tool, set EUT the following:
Rx1 = 1070
Rx2 = 1070
Tx = 1070
Power = High
Mode = D13
ENTER TEST MODE
- Select "Stop/Single" on Frequency Counter
- Record value: 1312
1300 Hz (+/- 13 Hz)
- Select Run on frequency counter
- Using the Configuration Tool, set EUT the following:
Rx1 = 1070
Rx2 = 1070
Tx = 1070
Power = High
Mode = D21
- Select "Stop/Single" on Frequency Counter
- Record value: 2114
2100 Hz (+/- 21 Hz)

Receiver Sensitivity, Setup Screen, Section 15.3.1, 25kHz Channel 162.025

The screenshot shows the 'Configure AIS' dialog box. The 'AIS Port Number' field contains the value '106'. The 'New MMSI' field is empty. The 'Power Level' field is a dropdown menu. To the right, there is a 'Test mode' checkbox which is unchecked, and two buttons labeled 'Enable' and 'Disable'. Below these, there is a 'Mode' dropdown menu. In the 'New Channel Numbers' section, 'RX Channel A' and 'RX Channel B' both contain '2088', and 'TX Channel' contains '2088'. At the bottom are 'Close' and 'Configure' buttons.

This screenshot is identical to the one above, but the 'AIS Port Number' field now contains the value '107'. All other fields and controls remain the same.

Due to a problem in the testing software, only 250 messages could be sent during a single run. Therefore, the sensitivity test software was run in 4 consecutive executions.

Receiver Sensitivity, Test Results, Section 15.3.1, 25kHz Channel 162.025

Run 3

Run 4

Receiver Sensitivity, Setup Screens, Section 15.3.1, 25kHz Channel 156.025

The 'Configure AIS' dialog box features a title bar with a close button. It contains several input fields and controls: 'AIS Port Number' (text box with '106'), 'New MMSI' (empty text box), 'Power Level' (dropdown menu), 'Test mode' (checkbox), 'Enable' and 'Disable' buttons, 'New Channel Numbers' section with 'RX Channel A' (1060), 'RX Channel B' (1060), and 'TX Channel' (1060) text boxes, and a 'Mode' dropdown menu. At the bottom are 'Close' and 'Configure' buttons.

AIS Port Number	New MMSI	Power Level	Test mode	Enable	Disable
106			☐	Enable	Disable

New Channel Numbers			Mode
RX Channel A	RX Channel B	TX Channel	
1060	1060	1060	

Close Configure

This 'Configure AIS' dialog box is identical in layout to the one above, but the 'AIS Port Number' text box contains the value '107'.

AIS Port Number	New MMSI	Power Level	Test mode	Enable	Disable
107			☐	Enable	Disable

New Channel Numbers			Mode
RX Channel A	RX Channel B	TX Channel	
1060	1060	1060	

Close Configure

Due to a problem in the testing software, only 250 messages could be sent during a single run. Therefore, the sensitivity test software was run in 4 consecutive executions.

- New Channel Numbers:** A group box containing:
 - RX Channel A:** Text box containing '1228'.
 - RX Channel B:** Text box containing '1228'.
 - TX Channel:** Text box containing '1228'.
- Mode:** Dropdown menu.
- Close/Configure:** Two buttons at the bottom.

Due to a problem in the testing software, only 250 messages could be sent during a single run. Therefore, the sensitivity test software was run in 4 consecutive executions.

Receiver Sensitivity (DSC), Section 15.4.1

DSC Sensitivity

Test Equipment Required:

- UAIS Test Equipment (TE)
- Frequency Counter
- Logic Analyzer
- 30db Attenuator (Black & Green)
- Tuning Tool

Cal Due: 5-22-04Cal Due: 2-19-04

Setup Instructions:

See Photo(s):

Procedure:

Note: PC not needed for this test (only Logic Analyzer)

- Set variable attenuators to zero
 - Replace TE RF cable with 100' Cable
 - Take TE and Additional Power supply 100' away
 - Using the MKD Test Mode, set TE the following:
 - Rx1 = 1070
 - Rx2 = 1070
 - Tx = 1070
 - Power = Low
 - Mode = D3 (Dot Pattern - 10101010)
 - Apply power and begin TE transmission
 - Connect Logic Analyzer pod (Ground, Clock & Data) to the BER Fixture
 - LOGIC ANALYZER:
 - 1 Select CONFIGURATION screen
 - 2 Select Hard Disk
 - 3 Scroll down to AIS_BER2_C and Select Execute
 - 4 Select SYSTEM → 100/500 Hz LA C
 - 5 Select CONFIGURATION → Listing 1
(Make sure power is applied and TE is running)
 - 6 Select RUN on the Logic Analyzer
 - 7 Wait for program to STOP
 - 8 Place selector on position 0 and select PRINT → PRINT DISK
 - 9 Select NAME and name the file DSCSEN1
 - 10 Insert Floppy → Select Hard Disk → Flexible Disk → EXECUTE
 - 11 Using frequency counter, verify that the unit is at 156.5254Hz
 - 12 Record value: SEC FILES
 - 156.5250 } DSCSEN - H
 - 156.5265 } DSCSEN - L
 - 156.5235 } DSCSEN - N
- Perform same test with TE1 (156.5265Hz)
- Perform same test with TE1 (156.5235Hz)

Performance Check at Dry Heat

Receiver Test A

A screenshot of a software dialog box titled "Performance Check". It contains several input fields and buttons. The first row has a label "How long to monitor messages?" followed by a text box containing "60", the word "Seconds", a label "EUT MMSI" followed by a text box containing "1", and two buttons labeled "Start" and "Stop". The second row has a label "Select Receiver Test" followed by two radio button options: "Receiver Test A - EUT off | TE on" (which is selected) and "Receiver Test B - EUT on | TE off". To the right of these is a label "EUT Serial" followed by a text box containing "000221933".

SECTION 3**DAMP HEAT FUNCTIONAL TEST SUMMARY**

Test Start-Finish Dates: 14 through 15 June 2003

Responsible Test Technician: David Carpenter

1-3 TEST HARDWARE

One (1) P/N AISA1-000-01 Automatic Identification System (AIS), S/N 000221933

2-3 TEST REQUIREMENTS

With the test hardware configured for operation, ascend to $40\pm 2^{\circ}\text{C}$ and $93\pm 3\%$ relative humidity (RH) in 3.0 ± 0.5 hours. Maintain these environmental conditions for 10 to 16 hours. Once the customer has completed any operational requirements, return the chamber to laboratory ambient conditions over a period of 1-hour or more.

2.1-4 Test Specification:

Primary: Section 8.3.1 of CEI IEC 60945, Fourth Edition, 2002-08

Reference: L3 Communications "Certification Test Matrix for the Automatic Identification System Part Number AISA1-000-00" number 905-M0151-54, Rev. A

3-3 TEST SETUP**QUALTEST FURNISHED MEASUREMENT AND TEST EQUIPMENT**

QTI #	Item	Manufacturer	Model Number	Calibration Due
100037	Chart Recorder	Honeywell	DR45AT-1111-0	11/22/2003
100279	Humidity Transmitter	Vaisala	HMP243	2/18/2004
100970	Temp/Humidity Chamber	Blue M	LRH-361EX219	NA

CHART RECORDER SETUP

Channel	Function	Type of sensor
1	Monitor chamber air temperature	100 Ω Bulb
3	Monitor chamber relative humidity	Solid State

The test item was placed on a rack in the temperature/humidity chamber with power cables routed through a porthole to customer support equipment located outside the chamber (Reference Figures 1-3 and 2-3).

4-3 TEST DESCRIPTION

4.1-3 Laboratory Ambient Conditions:

Temperature (°C): NA
Relative Humidity (%): NA
Atmospheric Pressure: Site Ambient

4.2-4 Non-Qualtest Personnel, Including Organization, Present for All or Part of the Test:

Todd White, a representative from L3 Communications

4.3-3 Powered/Operational State of the Hardware and by Whom:

Test item operation and functional testing was conducted by Todd White, L3 Communications. David Carpenter, Qualtest test technician, periodically observed functional test activities and was provided test data on digital media by the customer.

4.4-3 Test Activities and Resulting Measurements from Observed/Recorded Data:

Activity	Start Date/Time	End Date/Time	Duration
Ramp to 40±2°C with 93±3% RH	06/14/03 at 1735	06/14/03 at 2052	3-hrs 17-min
40±2°C with 93±3% RH	06/14/03 at 2052	06/15/03 at 0906	12-hrs 15-min
Ramp to 25±3°C	06/15/03 at 0906	06/15/03 at 1006	1-hour

5-3 ENVIRONMENTAL TEST DATA

No anomalies were observed. Chart recorder temperature and humidity data are located after Figure 2-3.

Screenshots related to the functional testing performed by the customer are presented in Enclosure III.

Figure 1-3. Typical chamber test setup for damp heat functional test.

Figure 2-3. Typical overall test setup for damp heat functional test.

ENCLOSURE III***L3 COMMUNICATIONS AUTOMATIC IDENTIFICATION SYSTEM (AIS) SCREEN SHOTS******FOR THE******DAMP HEAT FUNCTIONAL TEST*****PREFACE**

These data are the results of the IEC 60945 required Performance Checks and Performance Tests conducted by L3 Communications personnel. Customer data was supplied to Qualtest in Microsoft Word format on digital media, which was inserted into this Enclosure unaltered, including the descriptions with the accompanying graphics.

Criteria Statement

L3 Communications used the following criteria for Performance Checks.

Performance Check**Criteria for Pass**

- 1) IEC 61993-2 Paragraph 14.1.1.1 -Transmit Position Reports needs to be every 2 +/- 0.3 seconds.
- 2) IEC 61993-2 Paragraph 14.1.1.2 -Receipt Position Reports needs to be continuous for the duration of the test. No unmatched messages indicate successful continuous reception.

SECTION 4

SINUSOIDAL VIBRATION TEST SUMMARY

Test Start-Finish Dates: 19 June 2003

Responsible Test Technician: Don Henderson

1-4 TEST HARDWARE

One (1) P/N AISA1-000-01 Automatic Identification System (AIS), S/N 000221933

2-4 TEST REQUIREMENTS

With the test hardware configured for operation, perform the following activities:

Resonance Search ($\pm 10\%$ amplitude and $\pm 2\%$ frequency tolerance):

- One (1) sinusoidal upswEEP at a rate of 0.5 octave per minute in each of the three (3) orthogonal axes
 - 2 to 13.2 Hz at ± 1 mm (± 0.03937 inches)
 - 13.2 to 100 Hz at 7 m/s^2 ($0.714 G_{pk}$)

Endurance ($\pm 10\%$ amplitude and $\pm 2\%$ frequency tolerance):

- Two (2) hours of sinusoidal dwell at a single resonant frequency, as designated by the customer, in each of the three (3) orthogonal axes. A resonant frequency is defined as $Q \geq 5$. Use 30Hz if no resonant frequency is found.

2.1-4 Test Specification:

Primary: Section 8.7 of CEI IEC 60945, Fourth Edition, 2002-08

Reference: L3 Communications "Certification Test Matrix for the Automatic Identification System Part Number AISA1-000-00" number 905-M0151-54, Rev. A

ENCLOSURE IV***L3 COMMUNICATIONS AUTOMATIC IDENTIFICATION SYSTEM (AIS) SCREEN SHOTS******FOR THE******SINUSOIDAL VIBRATION TEST*****PREFACE**

These data are the results of the IEC 60945 required Performance Checks and Performance Tests conducted by L3 Communications personnel. Customer data was supplied to Qualtest in Microsoft Word format on digital media, which was inserted into this Enclosure unaltered, including the descriptions with the accompanying graphics.

Criteria Statement

L3 Communications used the following criteria for Performance Checks.

Performance Check**Criteria for Pass**

- 1) IEC 61993-2 Paragraph 14.1.1.1 -Transmit Position Reports needs to be every 2 +/- 0.3 seconds.
- 2) IEC 61993-2 Paragraph 14.1.1.2 -Receipt Position Reports needs to be continuous for the duration of the test. No unmatched messages indicate successful continuous reception.

VIBRATION TEST (SECTION 8.7 OF CEI IEC 60945)**(19 June 2003)****Vertical**

The image shows a 'Performance Check' dialog box. It has a title bar with the text 'Performance Check'. Inside, there are several fields and buttons. On the left, there is a label 'How long to monitor messages?' followed by a text box containing '120' and the word 'Seconds'. Below this is a section titled 'Select Receiver Test' with two radio button options: 'Receiver Test A - EUT off | TE on' (which is selected) and 'Receiver Test B - EUT on | TE off'. To the right of these are two more text boxes: 'EUT MMSI' containing '1' and 'EUT Serial' containing '221933'. On the far right, there are two buttons: 'Start' and 'Stop'.
