Chapter 1 Introduction

Description of EUT :

This device is a PS/2 mouse . It is suitable for HP or compatible one .

Connections of EUT :

(1)Connect the EUT to the mouse Port of PC .

Test method :

All measurement contained in this report were performed according to the techniques described in Measurement procedure ANSI C63.4-1992.

Pretest was found that the emission of operating mode is the same with standby mode .
So, The final test is made at the standby mode.

During testing ,the PC was in Windows 95 and make sure that the EUT can work .

The test placement as the photographs showed is the worst case emission placed. (If the emission is close to the ambience, the resolution BW and view resolution will be reduced and the data will be recorded by detection of maximum hold peak mode.)

The testing configuration of test set up is showing in the next page.

Configuration of test setup**Connections :****PC :**

- *Serial A port --- a modem .
 - *Serial B port --- a 76 cm shielded RS232 cable
 - *Printer port --- a Printer
 - *Keyboard port --- a Keyboard
 - *Mouse port --- EUT
 - *Monitor port --- a monitor
- (Each port on PC is connected with suitable device)

EUT :

- *Connect to mouse port of PC (1.2 m long, no ferrite cord)

List of support equipment**Conducted (Radiated) test :**

PC : HP
Model : Vectra VE2
Serial No. : SG61803151(SG61802786)
FCC ID : HCJVECTRAVL5
Power type : AC 117 VAC ,switching
Power cord : non-Shielded, 1.7m long ,Plastic ,no ferrite core

Monitor : HP
Model No. : D2084(D2813)
Serial No. : KR4397004(TW63803597)
FCC ID : CSYSC-428VSP(A3KM043)
Power type : 117VAC ,Switching
Power cord : Non-Shielded, 3m long ,no ferrite core
Data cable : Shielded, 1.8m long ,with ferrite core

Keyboard : HP
Model No. : C3757 #ABO (C3346A #ABO)
Serial No. : C3757-60423(C3346-60231)
FCC ID : CIGE03614
Power type : By PC
Data cable : Shielded, 1.8m long ,with ferrite core

Printer : HP
Model No. : C2642A
Serial No. : SG69A196GV
FCC ID : B94C2642X
Power type : Linear
Power cord : Non-shielded, 2m long, no ferrite core
Data cable : Shielded,1.84m long ,no ferrite core (1.7m)

Modem : ACEEX
Model No. : XDM-9624
FCC ID : IFAXDM-9624
Power cord : Non-shielded, 1.9m long, no ferrite cord
Data cable : RS232, Shielded, 1.2m long, no ferrite core,
RJ11C x 2 ,7' long non-shielded, no ferrite core

Chapter 2 Conducted emission test

Test condition and setup:

All the equipment is placed and setup according to the ANSI C63.4 - 1992.

The EUT is assembled on a wooden table which is 80 cm high, is placed 40 cm from the back-wall which is a vertical conducting plane. One LISN is for EUT, the other LISN is for support equipment. They are all placed on the conductive ground. The EUT's LISN connect a line switch box for selecting L1 or L2, then connect to a preamplifier and Spectrum.

The spectrum scans from 150KHz to 30MHz. Conducted emission levels are detected at max. peak mode. But if the max. peak mode failed, it will be measured by CISPR's quasi-peak detection mode.

While testing, there is a the worst-emission plot printed at peak detection mode, and there are more than 6 highest emissions relative to limit recorded. The plot is kept as the original data, not included in test report.

List of test instrument:

The level of confidence of 95%, the uncertainty of measurement of conducted emission is ± 2.4 dB.

Test Result: Pass (Appendix A)

Chapter 3 Radiated emission test

Test condition and setup:

Pretest: Prior to the final test (OATS test), the EUT is placed in a shielded enclosure, GTEM, and scan from 30MHz to 1GHz. This is done to ensure the radiation exactly emits from the EUT.

Final test: Final radiation measurements is made on a **10 – meter**, open-field test site. The EUT is placed on a nonconductive table which is 0.8 m height, the top surface is 1.0 x 1.5 meter. All the placement is according to ANSI C63.4 - 1992.

The spectrum is examined from 30 MHz to 1000 MHz measured by HP spectrum.

The EMCO whole range Antenna is used to measure frequency from 30 MHz to 1GHz. The final test is used the spectrum HP 8594EM.

Measure more than six top marked frequencies generated from pretest by computer step by step at each frequency. The EUT is rotated 360 degrees, and antenna is raised and lowered from 1 to 4 meters to find the maximum emission levels. The antenna is used with both horizontal and vertical polarization.

Appropriated preamplifier which is made by TRC is used for improving sensitivity and precautions is taken to avoid overloading. The spectrum analyzer's 6dB bandwidth is set to 120 K Hz, and the EUT is measured at quasi-peak mode.

If the emission is close to the frequency band of ambient, the data will be rechecked by the tester and the corrected data will be written in the test data sheet. If the emission is just within the ambient, the data from GTEM will be taken as the final data.

Note:

1. Margin = Amplitude - limit, *if margin is minus means under limit.*
 2. Corrected Amplitude = Reading Amplitude + Correction Factors
 3. Correction factor = Antenna factor + (Cable Loss - Amplitude gain)
- (For example : 30MHz correction factor = 15.5 + (-15.26) = 0.24 dB/m)
