Chapter six Labelling Guideline

Article: 27

The Authorized to import telecommunications devices for commercial purposes and the local manufacturer shall observe the following controls when designing and placing the type approval label (Approval Mark) on telecommunications devices:

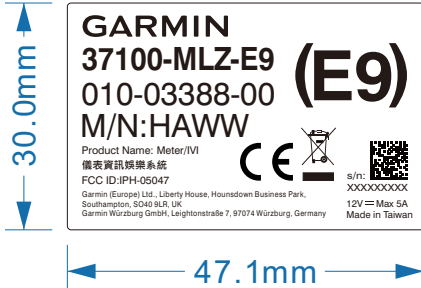

1- Labelling the certification mark on the outer cover of the telecommunications device in a visible manner. If this is not possible due to the small size of the device or otherwise, it is sufficient to place the left part of the certification mark. If this is not possible, it can be placed in any of the device's documents, such as the user's manual.

2-Applying the electronic label to the type-approved telecommunication devices that support the placement of the electronic label on them, provided that the label contains at least the approval certificate number.

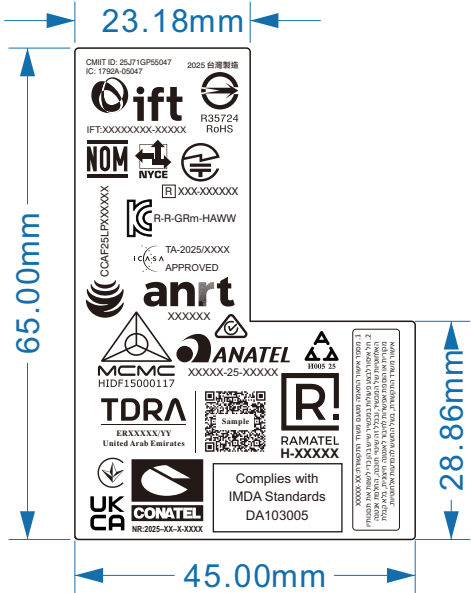

3- Print the certification mark or place it as a label if printing is not possible.

4 -The certification mark must have a white background and black writing, and the colors can be reversed.
