

To whom it may concern:

The FCC identifier was located inside the battery compartment on this device A4AMGB00 because of limited areas. The device is handheld with many curved surfaces. The top side is taken by most of a removable battery compartment cover and connectors. The bottom side is taken up by the large portion of display. The FCC identifier will be readily viewable as it will be visible each time the batteries are replaced in the device. Since the device will be sold without batteries installed the user will have to install batteries prior to using, thus they will see the FCC identifier prior to using the device for the first time.

Sincerely,

A handwritten signature in black ink, appearing to read "P. Phrommany".
