Attn: FCC Office of Engineering and Technology / UL Verification Services TCB

Ref: Class 2 Permissive Change for FCC ID: IPH-ESPWROOM32E
Original approval date: Aug 19, 2025
Applicant: Garmin

To Whom It May Concern

This is to request for a Class II Permissive Change for FCC Certified Transmitter Module FCC ID: IPH-ESPWROOM32E to add the following Host model numbers:

- A0P3363

As this new host is a portable host RF exposure data to demonstrate compliance with the FCC for the host/ module combination has been provided to support this application. There is no new colocation with other transmitters.

As the module is only approved as a limited module because the RF exposure was evaluated with the module inside the host enclosure.

In addition the following additional changes are being made to the module from the original approval:

- Output power is reduced for WiFi channels but Bluetooth operation is kept the same (refer to operational description/tune-up power document for full details and the output power measurements in the RF Exposure report).

The antenna is the same type and equal to the antenna certified for use with the module. Only RF exposure data is provided to support this application. We have performed spot checks to verify that the combination of host and module remain compliant with the FCC standards applicable to the module.

If you have any questions regarding this application, please feel free to contact me.

Sincerely yours,

Jeremiah Darden
