

Test Report: 5W36823.6 Issue 2

Applicant: Instantel Inc.
309 Legget Drive
Kanata, Ontario
K2K 3A3

**Equipment Under Test:
(EUT)** International Hugs Tags

FCC ID: ISEITG

In Accordance With: **FCC Part 15, Subpart C, 15.231**

Tested By: Nemko Canada Inc.
303 River Road, R.R. 5
Ottawa, Ontario K1V 1H2

Authorized By:

A handwritten signature in blue ink, appearing to read 'Sim Jagpal'.

Sim Jagpal, Resource Manager

Date: March 29, 2005

Total Number of Pages: 18

Section 1. Summary of Test Results

General

All measurements are traceable to national standards.

These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with Part 15, Subpart C. All tests were conducted using measurement procedure ANSI C63.4-2003. Radiated emissions are made on an open area test site. A description of the test facility is on file with the FCC.

THIS TEST REPORT RELATES ONLY TO THE ITEM(S) TESTED.

THE FOLLOWING DEVIATIONS FROM, ADDITIONS TO, OR EXCLUSIONS FROM THE TEST SPECIFICATIONS HAVE BEEN MADE.

See "Summary of Test Data".

TESTED BY: _____
Jason Nixon, Telecom Specialist

March 29, 2005
DATE: _____

Nemko Canada Inc. authorizes the above named company to reproduce this report provided it is reproduced in its entirety and for use by the company's employees only.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. Nemko Canada Inc. accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

This report applies only to the items tested.

Summary Of Test Data

Name of Test	Para. Number	Results
Transmission Requirements	15.231(a)	Complies
Radiated Emissions	15.231(b)	N/A (1)
Occupied Bandwidth	15.231(c)	Complies
Frequency Tolerance	15.231(d)	N/A (2)
Periodic Alternate Field Strength Requirements	15.231(e)	Complies
Powerline Conducted Emissions	15.207	N/A (3)

Justification of N/A's:

- (1) The EUT transmits periodically, therefore it was required to comply with the limits of 15.231(e).
- (2) The EUT does not operate in the frequency range of 40.66 – 40.70 MHz.
- (3) The EUT is battery powered.

Test Conditions:

Indoor Temperature: 22°C
 Humidity: 16%

Outdoor Temperature: 10°C
 Humidity: 78%

Section 2. Equipment Under Test

General Equipment Information

Manufacturer:	Instantel Inc.
Model No.:	806A5201
Serial No.:	None
Date Received In Laboratory:	January 21, 2005
Nemko Identification No.:	7
Frequency Range (<i>or fixed frequency</i>):	433.42-434.42MHz
RF Power in Watts:	N/A
Field Strength (<i>distance</i>):	61.0dBuV/m @ 434.17MHz @ 3m
Occupied Bandwidth (99% BW):	650kHz
Type of Modulation:	PCM
Emission Designator (TRC-43:)	650K0L1D
Transmitter Spurious (<i>worst case</i>):	26.2dBuV/m @ 1302.51MHz @ 3m
Receiver Spurious (<i>worst case</i>):	N/A
Antenna:	Integral

Section 3. Transmission Requirements

Para. No.: 15.231(a)

Test Performed By: Jason Nixon

Date of Test: January 24, 2005

Minimum Standard: 15.231(a) Continuous transmissions such as voice, video or data transmissions are not permitted.

15.231(a)(1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds after being released.

15.231(a)(2) A transmitter activated automatically shall cease transmission within 5 seconds of activation.

15.231(a)(3) Periodic transmissions at regular pre-determined intervals are not permitted. However polling or supervisory transmissions to determine system integrity of transmitters used in security or safety applications are allowed if the periodic rate of transmission does not exceed one transmission of not more than one second duration per hour for each transmitter.

15.231(a)(4) Intentional radiators which are employed for radio control purposes during emergencies involving fire, security, and safety of life, when activated to signal an alarm, may operate during the pendency of the alarm.

Test Results: Complies

Test Data: Compliance was determined by verification of technical specifications and a functional test on the equipment.

Rationale for Compliance with Transmission Requirements

- 15.231(a)(1) :** The apparatus is not manually controlled.
- 15.231(a)(2) :** The apparatus does transmit automatically to report an alarm condition. See plots below. Each Alarm transmission consists of a 6 pulses burst followed by two single pulses. This occurs for each alarm condition.
- 15.231(a)(3) :** The apparatus does transmit periodically but this is covered under 15.231(e).
- 15.231(a)(4) :** The apparatus is not used during emergencies.

Section 4. Occupied Bandwidth

Para. No.: 15.231(c)

Test Performed By: Jason Nixon**Date of Test: January 24, 2005**

Minimum Standard: 15.231(c) The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.

Test Results: Complies**Test Data:** See attached graph.

Section 5. Periodic Alternate Field Strength Requirements

Para. No.: 15.231(e)

Test Performed By: Jason Nixon

Date of Test: January 24, 2005

Minimum Standard: 15.231(e) Intentional radiators may operate at a periodic rate exceeding that specified in paragraph (a) of this section and may be employed for any type of operation, including operation prohibited in paragraph (a) of this section, provided the intentional radiator complies with the provisions of paragraphs (b) through (d) of this section, except the field strength table in paragraph (b) of this section is replaced by the following.

Fundamental Frequency (MHz)	Field Strength of Fundamental ($\mu\text{V/m @ 3m}$)	Field Strength of Spurious Emissions ($\mu\text{V/m @ 3m}$)
40.66 - 40.70	1,000	100
70 - 130	500	50
130 - 174	500 to 1,500	50 to 150
174 - 260	1,500	150
260-470	1,500 to 5,000	150 to 500
Above 470	5,000	500

In addition, devices operated under the provisions of this paragraph shall be provided with a means for automatically limiting operation so that the duration of each transmission shall not be greater than one second and the silent period between transmissions shall be at least 30 times the duration of the transmission but in no case less than 10 seconds.

Test Results: Complies

Test Data: As per attached tabulated data.

All measurements were performed using a Peak Detector with 100kHz RBW below 1GHz and a 1MHz RBW above 1GHz.

All emissions were searched from 30MHz up to the 10th harmonic of the transmitter.

EQUIPMENT: International Hugs Tags

The apparatus was tested on three orthogonal axis and with a fresh battery.

EQUIPMENT: International Hugs Tags

Frequency (MHz)	Antenna	Polarity	RCVD Signal (dBuV)	Ant. Factor (dB)	Amp. Gain (dB)	Duty Cycle Corr.	Cable Loss (dB)	Emission Level (dBuV/m)	Limit (dBuV/m)	Margin (dB)

On-time for Periodic transmissions

EQUIPMENT: International Hugs Tags

Time between Periodic transmissions

Time between transmissions > 30 x transmission on-time

$$11.4s > 30 \times 10.917msec$$

*EQUIPMENT: International Hugs Tags***Duty Cycle Correction Factor**

1 Pulse = 14.833 msec, worst case is 2 pulses in 100msec

Duty Cycle = $20\log((2 \times 14.833)/100) = -10.6\text{dB}$

The worst case duty cycle would occur during an alarm condition when 6 pulses are transmitted over a 272msec period.
