Dear Tim,

After confirm with our client, the antenna diversity function was provided
 for receiver , and only dipole
 antenna will be used for transmitting.

For the question of the band edge, we had reconfirmed the emission of band
 edge and we will
 upload to ATCB Website after 30 minutes, and Vivi will inform you.

Thanks and Best Regards

Dear Tim,

For item 1:

For IEEE802.11b, Intercil's chip solution always provide antenna diversity function. Both antenna could be used for transmitting and receiving. But both only one of them will be used for transmitting or receiving at the same time.

In our testing, we will look which one will produce worst emission case.

item 2: Testing manager processing.

Thanks,

Regards,
Vivi
