

BANDWIDTH OF EMISSIONS

SUBCLAUSE 15.231 (c)

Date: 16.JAN.2002 13:02:53

We used a small BW to determine the frequencies and a long sweep time to catch all signals. The red line is the -20 dB line (99.5 %) according to FCC standards.

So the occupied BW is $315.032 \text{ MHz} - 314.974 \text{ MHz} = \underline{58 \text{ kHz}}$.

The limit for 315 MHz is 780 kHz.
