2.1033(c)(4) – Type(s) of Emissions

The emission designator is M1D5M00.

2.1033(c)(5) – Frequency Range

Frequency Range tested from 2150-2162 MHz.

2.1033(c)(7) – Maximum Power Rating

Maximum power rating as defined in the operating part(s) of the rules:

110 mW

2.1033(c)(14)/2.1046 - RF POWER OUTPUT

Test Conditions: The EUT was connected directly to the signal analyzer. The EUT is a Wireless Cable Modem operating at 2150-2162MHz. The EUT receives power from the modem via a RG58 cable. The power to the cable is provided through the power inserter. The EUT is continually sending packets via command from the PC. The EUT was operating on the Low Channel (2153MHz) and then again on the High Channel (2159MHz).

2.1033(c)(14)/2.1053 - FIELD STRENGTH OF SPURIOUS RADIATION

Test Conditions: All harmonics and subharmonics of the carrier frequency were investigated. Measurements were also made to detect any spurious emissions that were directly radiated from the EUT under normal conditions of installation and operation. All spurious emissions which were attenuated more than 20 dB below the permissible value were not reported. The information submitted includes the relative radiated power of each spurious and harmonic emissions with reference to the rated power output of the transmitter (assuming all emissions are radiated from half-wave dipole antennas).

CALCULATIONS

Note: The data taken is relative to the radiated power of each spurious emission with reference to the rated power output of the transmitter.

Channel 1 2153MHz - Output power measured at 3 meters = 117.4dBuV/m or 10.96mW.

$$10 \log (10.96\text{mW}/1\text{mW}) = 10.398\text{dBm}$$

$$10 \log (10.96\text{mW}/1\text{mW}) = 10.398\text{dBm}$$

$$\text{Inv Log } (-39.6 \text{ dBm}/10) = 0.000109597$$

Spec Limit = 0.000109597 Watts for Low Channel (2153MHz)

Channel 2 - 2159MHz - Output power measured at 3 meters = 117.1dBuV/m or 10.23mW

$$10 \log (10.23\text{mW}/1\text{mW}) = 10.09 \text{ dBm}$$

$$\text{Inv Log } (-39.990\text{dBm}/10) = 0.0001023\text{W}$$

Spec Limit = 0.0001023 Watts for High Channel (2159MHz)

Formulas Used:

$$\text{ERP} = (\text{Ed})^2/30(\text{G})$$

$$\text{E} = \text{V/m}$$

d= distance

G = Gain of Antenna (numerical gain of half wave dipole antenna 1.64 per Part 2.1053(a))

Conversion of dBuV/m to V/m

$$[\text{invlog}(\text{Reading in dBuV/m}/20)] \cdot 0.00001 = \text{V/m}$$
