CKC Laboratories, Inc. has received Certificates of Accreditation from the following agencies:

A2LA (USA); DATech (Germany); BSMI (Taiwan); Nemko (Norway); and GOST (Russia).

CKC Laboratories, Inc. has received test site Registration Acceptance from the following agencies:

FCC (USA); VCCI (Japan); and Industry Canada.

CKC Laboratories, Inc. has received Letters of Acceptance through an MRA for the following agencies:

ACA/NATA (Australia); SABS (South Africa); SWEDAC (Sweden); Radio Communications Agency (RA); HOKLAS (Hong Kong); Bakom (Swiss); BIPT (Belgium); Denmark Telestyrelsen; RvA (Netherlands); SEE (Luxembourg) SITTEL (Bolivia); and UKAS (UK).

ADMINISTRATIVE INFORMATION

DATE OF TEST: September 19, 2001

DATE OF RECEIPT: September 19, 2001

PURPOSE OF TEST: To demonstrate the compliance of the MMDS/MMDS Low TX In-Band Transceiver, 520031-1 and 520031-2 with the requirements for FCC Part 21 and FCC Part 15 Subpart B Section 15.107 Class B devices. This addendum is to correct minor errors in the report on pages 6, 8, 9 and 20-22.

TEST METHOD: Part 21 and ANSI C63.4 (1992)

MANUFACTURER: California Amplifier, Inc.
460 Calle San Pablo
Camarillo, CA 93033

REPRESENTATIVE: Shawn Aleman

TEST LOCATION: CKC Laboratories, Inc.
5473A Clouds Rest
Mariposa, CA 95338

SUMMARY OF RESULTS

As received, the California Amplifier, Inc. MMDS/MMDS Low TX In-Band Transceiver, 520031-1 and 520031-2 was found to be fully compliant with the following standards and specifications:

United States

- FCC Part 21
- FCC Part 15 Subpart B Section 15.107 Class B
 - ANSI C63.4 (1992) method

The results in this report apply only to the items tested, as identified herein.

MODIFICATIONS REQUIRED FOR COMPLIANCE

No modifications were required for compliance

APPROVALS

QUALITY ASSURANCE:

Dennis Ward, Quality Manager

TEST PERSONNEL:

A handwritten signature in cursive script that reads "Randy Clark".

Randy Clark, EMC Engineer

EQUIPMENT UNDER TEST (EUT) DESCRIPTION

The MMDS/MMDS Low TX In-Band Transceivers tested by CKC Laboratories were production units. The difference between the two models is that the 520031-1 has an antenna connector and the 520031-2 does not have an antenna connector. Both models operate using the same circuit boards.

EQUIPMENT UNDER TEST

MMDS/MMDS Low TX In-Band Transceiver

Manuf: California Amplifier, Inc.
Model: 520031-2
Serial: 002
FCC ID: J26520031-2 (pending)

PERIPHERAL DEVICES

The EUT was tested with the following peripheral device(s)

Signal Generator

Manuf: HP
Model: E4437B
Serial: US39260147
FCC ID: DoC

Power Supply

Manuf: California Amplifier, Inc.
Model: 71441
Serial: N/A
FCC ID: J26520031-2 (pending)

TEMPERATURE AND HUMIDITY DURING TESTING

The temperature during testing was within +15°C and + 35°C.
The relative humidity was between 20% and 75%.

2.1033(c)(3) USER'S MANUAL

The necessary information is contained in a separate document.

2.1033(c)(4) TYPE OF EMISSIONS

The emissions designator for the MMDS/MMDS Low TX In-Band Transceiver is 5M00M1D.

2.1033(c)(5) FREQUENCY RANGE

The transmitter operates at 2500-2542 MHz and the receiver operates at 2584-2686 MHz.

2.1033(c)(6) OPERATING POWER

The minimum operating power is -47dBm at the input with a maximum of 25 dBm.

2.1033(c)(7) MAXIMUM POWER RATING

The maximum power rating as defined in the applicable rule part is +63.26 dBm.

2.1033(c)(8) DC VOLTAGES

The DC voltage applied is 550mA at 6V.

2.1033(c)(9) TUNE-UP PROCEDURE

No tuning is required for specific power levels.

2.1033(c)(10) SCHEMATICS AND CIRCUITRY DESCRIPTION

The necessary information is contained in a separate document.

2.1033(c)(11) LABEL AND PLACEMENT

The necessary information is contained in a separate document.

2.1033(c)(12) SUBMITTAL PHOTOS

The necessary information is contained in a separate document.

2.1033(c)(13) MODULATION INFORMATION

Not applicable to this device.

2.1033(c)(14)/2.1046/21.904(d) - RF POWER OUTPUT

The average channel power is calculated as follows;

The power is measured using a power meter and a peak detector in dBm/Hz. The channel power is then calculated as follows:

$$\text{dBm/channel} = \text{dBm/Hz} + 10 \cdot \text{LOG}(\text{channel bandwidth in Hz})$$

In this case, the channel bandwidth is 1.6MHz, therefore
 $10 \cdot \text{LOG}(1.6 \times 10^6) = 62.04\text{dB}$ for all channels.

The limit stated in 21.904 for non-omni-directional antennas is calculated as follows:
 $\text{EIRP} = 33 \text{ dBW} + 10 \log(X/6) \text{ dBW} + 10 \log(360/\text{beamwidth}) \text{ dBW}$, where X is the channel width in MHz and $10 \log(360/\text{beamwidth}) \leq 6 \text{ dB}$.

The channel bandwidth is 1.6MHz, and the beamwidth of the antenna is 18° , so

$$10 \text{LOG}(1.6\text{MHz}/6\text{MHz}) = -5.74$$

$$10 \text{LOG}(360/18^\circ) = 13.01 \text{ (which is greater than 6dB therefore the maximum of 6dB is used)}$$

$$\begin{aligned} \text{EIRP} &= 33\text{dBW} - 5.74\text{dB} + 6\text{dB} \\ &= 33.26\text{dBW} \\ &= 63.26\text{dBm} \\ &= \mathbf{170.26\text{dBuV}} \end{aligned}$$

Power Output Calculations

Radiated Measurements

Channel	Transmit Antenna Polarity	Channel Frequency (MHz)	Channel Power (Watts)
Low	H	2501.70	89.6
Middle	H	2520.77	62.0
High	H	2540.12	59.2
Low	V	2501.88	56.5
Middle	V	2520.85	45.9
High	V	5240.71	48.1

Antenna Conducted Measurements

Channel	Channel Frequency (MHz)	RF Output Power (dBm)	RF Output Power (Watts)
Low	2501.45	20.9	0.123
Middle	2520.76	20.8	0.120
High	2540.26	21.2	0.133

Maximum Allowable Output Power is:
33.26dBW (63.2dBm) = 2089 Watts

Power Calculations:

$\text{Power} = (E \cdot D)^2 / 30 \text{ G}$

Channel Power = dBm/Hz + 10*LOG(channel BW in Hz)

2.1033(c)(14)/2.1053/21.908(d) - FIELD STRENGTH OF SPURIOUS RADIATION

Calculation of Emissions Mask for OATS Measurements:

Emissions Mask calculated using the relative measurement technique IAW 21.908(e) using the peak detector function of a spectrum analyzer. The resolution bandwidth of the peak “flat top” reading of the digital signal is 100kHz. Radiated spurious emissions are also measured at 100kHz. Therefore attenuation (dBc) at each spectral point of concern ($A + 10 \cdot \text{LOG}(\text{RBW1}/\text{RBW2})$ where A is 25, 40 and 60dBc) is calculated as follows;

$$10 \cdot \text{LOG}(\text{RBW1}/\text{RBW2}) =$$

$$10 \cdot \text{LOG}(100\text{kHz}/100\text{kHz}) = 0$$

Thus the attenuation (dBc) is 25, 40 and 60.

The median peak flattop level of fundamental is 28.3dBm (135.3dBuV)

The attenuation is as follows:

25dBc or 3.3dBm (110.3dBuV) at the channel edge

From that point on a linear slope to 40dBc or –11.7dBm (95.3dBuV) at 250kHz removed from the channel edge.

From that point on a linear slope to 60dBc or –31.7 (75.3dBuV) at 3MHz removed from the channel edge.

60dBc or –31.7dBm (75.3dBuV) at all other frequencies.

Note: The following plots are uncorrected for antenna factors, amplifiers or cable factors. The above mask was adjusted to the uncorrected reading so it could be shown graphically. The highest output power was recorded from the lowest channel at 89.5 dBuV (uncorrected).

Bandedge - 2500 MHz

Note: Limit line shown has been adjusted for the factors associated with the test equipment.

Bandedge - 2542 MHz

Note: Limit line shown has been adjusted for the factors associated with the test equipment.

Spectrum Analyzer	HP	8566B	2209A01404	490	11/3/00	11/3/01

Notes: 1) Frequency stability test was performed on the TX reference clock. A spectrum analyzer was used in lieu of a frequency counter because the fundamental has a much higher output. 2) Temperature testing has been performed by Cal Amp and will be provided as a separate document.

California Amplifier setup diagram for voltage variations.

15.207 – AC CONDUCTED EMISSIONS

Test Location: CKC Laboratories, Inc. • 5473A Clouds Rest • Mariposa, CA 95338 • 800-500-4362

Customer: **California Amplifier**

Specification: **FCC 15.107 Class B**

Work Order #: **77604**

Date: 09/20/2001

Test Type: **Conducted Emissions**

Time: 12:12:33 PM

Equipment: **MMDS Transceiver**

Sequence#: 13

Manufacturer: California Amplifier

Tested By: Randal Clark

Model: 520031-2

S/N: 002

Equipment Under Test (* = EUT):

Function	Manufacturer	Model #	S/N
MMDS Transceiver*	California Amplifier	520031-2	002

Support Devices:

Function	Manufacturer	Model #	S/N
Signal Generator	HP	E4437B	US39260147
Power Supply	Cal Amp	71441	N/A

Test Conditions / Notes:

EUT is a MMDS transceiver with QPSK modulation of 1.2MSps with a bandwidth of 1.6MHz. EUT is turned on and all clocks are active. EUT is not transmitting. Antenna is terminated in a 50Ohm load.

Measurement Data:

Reading listed by margin.

Test Lead: Black
