Japan

MEASUREMENT / TECHNICAL REPORT

Fuji Xerox
Model DocuPrint P12

FCC ID : J2LXXA1PGXA

July 14, 1998

This report concerns (check one): Original grant ☐ Class II change ☒

Equipment type: **LASER PRINTER** (ex.: computer, printer, modem, etc.)

Deferred grant requested per 47 CFR 0.457 (d) (1) (ii)? yes ☐ no ☒

If yes, defer until: _____ date

Company Name agrees to notify the Commission by _____ date
of the intended date of announcement of the product so that the grant can be issued
on that date.

Transition Rules Request per 15.37? yes ☐ no ☒

If no, assumed Part 15, Subpart B for unintentional radiators - the new 47 CFR
[10 - 1 - 90 Edition] provision.

Report prepared by:

1. GENERAL INFORMATION

Certificate

APPLICANT : Fuji Xerox Co.,Ltd.
REGULATION(S) : FCC Part 15 Subpart B, Class B
FCC ID : J2LXXA1PGXA
MODEL NUMBER : DocuPrint P12
KIND OF EQUIPMENT : Laser Printer
TESTED DATE : July 1, 1998
REPORT FILE NUMBER : TR2-98260F
TEST SITE : EMC Kashima Corporation
No.2 Open Test Site

This equipment is in compliance with above regulation. We hereby certify that the data are contain a true representation of the emissions profile.

This test report clearly shows that the EUT model DocuPrint P12 Laser Printer is in compliance with the FCC Part 15B, Class B specification.

July 14, 1998
DATE

Masaru Nakayama
President

Kenichi Suda
Director

Product Description

The EUT, Fuji Xerox Model DocuPrint P12 (referred to as the EUT in this report) is a Laser Printer (Letter, A4, A5,B5,Legal) which mounts a Centronics interface.

The printing speed is 12.0 pages per minute (A4 size).

The printing resolution is 600 x 600dpi.

The highest clock frequency used in the EUT is 54.405MHz

The EUT provides optional devices as followings;

1. 500 Sheet Feeder
2. Memory Kit (16MB)

Tested System Details

The FCC IDs for the equipment used in the tested system are :

	Model & Serial No.	FCC ID	Description	Company

(1)	DocuPrint P12 none(EUT)	J2LXXA1PGXA	Laser Printer	Fuji Xerox
(2)	D4594B SG74350130	DoC*	Personal Computer	HP
(3)	444 540BA11AF392	BR8SM-1557	Color Monitor	COMPAQ
(4)	RT6656TWJP 52372139	AQ6-MTN4C15	Keyboard	HP
(5)	M-S34 LZA72258898	DZL211029	Mouse	HP
(6)	C202A 010305	BKM552C202A	Modem	EPSON
(7)	H00CAA 019812	N/A**	AC adapter	EPSON

note * : Authorized under a Declaration of Conformity

** : Not Applicable

Test Methodology

Both conducted and radiated tests were performed according to the procedures in ANSI C63.4-1992.

Radiated test was performed at a distance of 3 meters between an antenna and EUT.

Test Facility

The open area site and conducted measurement facility used to collect the radiated data are located on 1614, Mushihata, Omigawa-machi, Katori-gun, Chiba-ken, Japan.

No.2 test site has been fully described in a report dated October 3, 1995 submitted to your office, and accepted in a letter dated October 27, 1995 (31040/SIT 1300F2).

2. SYSTEM TEST CONFIGURATION

Justification

The system was configured for testing in a typical fashion (as a customer would normally use it). The preliminary test was carried out for all available modes. Optional 16MB SIMM is equipped to EUT.

The continuous printing mode was found to be the worst case, and this mode was used to collect the included data .

EUT Exercise Software

The EUT exercise program used during radiated and conducted tests was designed to exercise the various system components in a manner similar to a typical use . The program sequentially exercises each system component in turn .

The sequence used is :

- (1) CRT Monitor displays H (full screen) ,
- (2) EUT (Parallel I/F) prints H (Letter sheet),
- (3) EUT sends "H" to Modem,
- (4) Mouse is standby.

Configuration of Tested System

4. CONDUCTED EMISSION PROFILE

The initial step in collecting conducted data was a spectrum analyzer peak scan of the measurement range (450kHz~30MHz). The final data were reported in the worst-case emissions.

The minimum margins to the limits are as follows:

Frequency (MHz)	Reading** (dBuV)	Line* (N/L)	LISN Factor*** (dB)	Result (dBuV)	Limits (dBuV)	Margin (dB)
28.6349	37.0	N/ L	1.8	38.8	48.0	9.2

Remarks : The test result of the print mode is higher than that of the standby mode.

- * N : Neutral L : Line
- ** All readings are quasi-peak mode.
- *** LISN Factor + Cable Factor

5. RADIATED EMISSION PROFILE

The initial step in collecting radiated data was a spectrum analyzer peak scan of the measurement range (30MHz~1000MHz). The final data was reported in the worst-case emissions.

The minimum margins to the limits are as follows:

Frequency (MHz)	Polarity* (H/V)	Reading** (dBuV)	Correction*** Factor (dB)	Result (dBuV/m)	3 Meter Limit (dBuV/m)	Margin (dB)

126.94	H	42.0	-4.0	38.0	43.5	5.5

Remarks : The test results are same in the standby and print modes.

* H : Horizontal V : Vertical

** All readings are quasi-peak mode.

*** Antenna Factor + Cable Factor + Antenna Pad - Amplifier Gain

Field Strength Calculation

The field strength is calculated by adding the Antenna Factor , Cable Factor and Antenna Pad (Attenuator) , and subtracting the Amplifier Gain from the measured reading . The sample calculation is as follows :

$$FS = RA + AF + CF + AT - AG$$

where FS = Field Strength
 RA = Receiver Amplitude
 AF = Antenna Factor
 CF = Cable Factor
 AT = Antenna Pad
 AG = Amplifier Gain

Assume a receiver reading of 42.0 dBuV is obtained . The antenna Factor of 13.7 dB , Cable Factor of 2.1 dB and Antenna Pad (Attenuator) of 6.0 dB is added . The Amplifier Gain of 25.8 dB is subtracted , giving a field strength of 38.0 dBuV/m.

$$\begin{aligned} FS &= RA + AF + CF + AT - AG \\ &= 42.0 + 13.7 + 2.1 + 6.0 - 25.8 = 38.0 \text{ dBuV/m} \end{aligned}$$
