

Description of the M3AWEB56GA

The MPCII Type III A 802.11B + Modem 56K Card Model: M3AWEB56GA is a WLAN Mini PCI adapter that enables high-speed access to internet and intranet assets without wires. This card uses the IEEE 802.11 protocol to enable communications between the host computer and either another host computer or a network, using the 2.4GHz ISM Radio Band for the communications medium. The host computer uses the adapter for communications in the same way that it would use an Ethernet Network Interface Card (NIC). The M3AWEB56GA also has a 56k Modem Wide Area Network using the Telecommunication Lines.
