3.3.1 OC3 I/O Subsystem Functional Description

The OC3 STM-1 subsystem consists of the AUX interface board and the I/O interface modules. The I/O subsystem interfaces the XMT and RCV and monitor and control subsystems. The OC3 I/O subsystem converts OC3 STM-1 signals to digital signals and multiplexes this data with overhead data. Multiplexed data is demultiplexed to separate the overhead data from the data stream.
