FAQ

We've put everything you need to get started with your CIRCLE right here. If you still have questions browse the topics on the left.

How do I filter the event bubbles?

To filter the event bubbles you would like to see:

1. From the App view, tap the three dots on the top right to open the event toolbar.
2. You will see small blue and grey circles on the far right toolbar. Tap the small circles to hide/show the corresponding event bubble in the timeline.
NOTE: The event bubbles contain more activity than the grey ones.
3. Tap the small circles in the toolbar to hide them both (deactivate them, they would appear hollow) to easily navigate between the yellow and X-Files.

Adjustable angle for ultimate comfort

MX ERGO offers the best possible comfort by allowing a better wrist and hand posture, reducing muscle activity & minimising wrist pressure. On MX Ergo you can choose between 2 angles, 0° and 20°.

Introduction

Thank you for purchasing the worlds most advanced Trackball

We hope you will love using the product

Clean your product

Keep your ball clean

1. Turn Off
2. Remove metal plate
3. Use soft tip of the pen to eject ball
4. Remove dust from the bearings (and the ball) with tissue.

Power Management

1. Battery Life
2. Recharge your product
3. LED behaviour

MX ERGO BENEFITS

Improved wrist posture

Lower muscle activities

Reduced wrist pressure

IMPROVED BODY POSTURE

A MORE NATURAL HAND POSITION

Imaging sleeping in space, or in water. Naturally, your body will take a natural fetal position where all the muscles and tendons are at rest. The forearm and hand will take a vertical position, just like in a handshake.

Poor posture has been identified as one of the key risk factors for Repetitive Strain Injury (RSI). The goal of ergonomics is to moved toward natural postures. However, by being used on the table, the mouse forces the hand to be in a more horizontal, pronated position.

The trackball and in particular the MX ERGO, by its innovative design, allows the forearm to rotate clockwise and reduces the stress on the muscles holding the 2 forearm bones: the Radial and Ulnar.

MOUSE

MX ERGO

HANDSHAKE

TILT AT 20°

MX ERGO is tillable to an additional 20 degree angle that helps to limit even more the forearm pronation. It makes the trackball the most comfortable pointing device from Logitech.

Why 20°? This angle has been studied as the best angle for comfort and aesthetic appeal. A higher angle is seen as too drastic by consumers.

AVR 30°

AVR 45°

LOWER MUSCLE ACTIVITIES

Five key muscles are used while moving a mouse or a trackball, and can be involved in potential injuries (e.g. epicondylitis).

The less they work, the more relaxed and comfortable the user is.

Only the thumb abductor muscle works more to move the ball (but only by +12%).

REDUCED WRIST PRESSURE

REDUCED WRIST PRESSURE

While using a mouse, the wrist sits on the table for hours. Over time, this pressure can lead to pain, and dangerously to Carpal Tunnel Syndrome, a repetitive strain injury (RSI). The best solution to avoid this pain is to remove the pressure on the wrist as much as possible. The trackball offers a great solution as its sculpted design and static base (only the thumb is moving) allow the wrist to be relaxed, at rest.

TRACKBALL

Most of the pressure is on the palm and almost nothing on the wrist.

MOUSE

Most of the pressure is on the wrist.
