Average Factor Calculation

Average Factor Calculation:

$$20 \log \left(\frac{\text{time on}}{100\text{ms}} \right)$$

$$\text{Time On} = 2560\text{us} + 5760\text{us} = 8320\text{us}$$

$$\text{Average Factor} = 20 \log \left(\frac{8.32}{100} \right) = -21.6$$

∴ 20dB Average Factor will be used.
