# Medio L40 Professional Installation Requirement

HID Textile Services is the first global supplier of RFID products and infrastructures in the world. It only addresses professional and commercial markets worldwide. HID Textile Services only sells RFID tags, RFID Readers and antennas to qualified partners and integrators who are in charge of professionally install them on customers' sites.

These end User Customers are:

- Professional Laundries worldwide
- Healthcare facilities worldwide
- Hospitality establishments worldwide

Thus, the general public cannot purchase HID Textile Services hardware or Software. Partners and integrators must have qualified electronics engineers with radio frequency knowledge to be able to install or integrate our products. Furthermore, they must follow a specific technical training conducted by our technical experts before they can start a RFID project.

Even then, during installation one of our field support & maintenance engineer must follow-up and commission the installation in order to make sure that:

- Local regulations for Electrical Safety and Radio emission levels are strictly followed.
- Antennas are placed at the right place, the right way, using the optimum cable length, free of metallic parts or sources of noise which could change antenna parameters and impair performance and reliability.
- Use professional radio equipments to survey sites: network, analyzer, spectrum analyzers.
- Proper use of software libraries in order to efficiently set-up the RFID parameters and insure that our 6-sigma reliability corporate goal is achieved in all installations, wherever in the world.

To whom it may concern
