

G4P Permanent Interior Transponder Mounting Instructions

The G4P interior transponder mounts on the vehicle windshield. The preferred mounting location is between the roofline and the rear view mirror post. If there is not enough room in the preferred mounting location to accommodate the G4P transponder, the transponder can be mounted beside the rear view mirror post. The transponder is secured using 3M™ VHB™ foam tape.

Requirements

- For reliable operation of the transponder, the vehicle must be equipped with only one transponder while passing through a toll facility. Other transponders present in or on the vehicle must be switched off or enclosed in an RF shield.
- The mounting location must provide direct line-of-sight communication between the transponder and the toll facility overhead antenna.
- Do not mount the G4P transponder on vehicles:
 - ◆ with non-metallic roofs.
 - ◆ with windshields covered in RF-blocking material (ex. metal oxide).
 - ◆ with a metallic center windshield dividing post.
 - ◆ without center-mounted rear view mirrors.
- Handheld mobile communication devices must not be located within 12 in. of the transponder.
- Metal objects (except for the rear view mirror and the roof) must not be located within 6 in. of the transponder.
- G4P transponders cannot be used where local regulations prohibit mounting transponders on the windshield.
- Apply 3M VHB acrylic foam tape in accordance with 3M document 70-0704-8701-5.

G4P Transponder Mounting Instructions

1. Select a mounting location on the front windshield. The G4P transponder should be mounted ½ in., but no more than 2 in., from the roofline. The preferred mounting location is between the roofline and the rear view mirror mounting post, with a minimum of ½ in. between the transponder and the rear view mirror post.

Preferred Mounting Location - Side View

2. If there is insufficient space in the preferred location, select an alternate mounting location beside the rear view mirror post:

3. Three 3M VHB acrylic foam tape strips on the back of the G4P transponder are used to mount the transponder to the windshield. Prepare the mounting location in accordance with 3M document 70-0704-8701-5.

4. The G4P transponder is shipped in a transparent cap to protect the VHB acrylic foam tape strips. Remove and discard cap.
5. Remove the protective backing from the VHB acrylic foam tape strips.

6. Firmly press the G4P transponder against the windshield in the mounting location, ensuring the orientation arrows are pointing skyward. Maintain pressure for 15 seconds to ensure a good bond.

FCC Approved

This device complies with part 15 of the FCC rules.
Operation is subject to the condition that this device
does not cause harmful interference
