Fax: (403) 273-5100

Wi-LAN inc. Supplemental Test report: #300 - 24

For Wi-LAN inc. W-OFDM 300-24

**In Accordance With: FCC Part 15, Subpart C
Direct Sequence Transmitters 2400-2483.5 MHz**

Tested By: Wi-LAN inc.

Date: May 25, 2001

Peak Output Power

Results:

Channel	Power (dBm)	Power (W)	Limit (W)
Low	17.3	0.053	0.1
Mid	17.5	0.056	0.1
High	18.45	0.070	0.1

Data:

Low Channel

Mid Channel

High Channel

Method:

- The output of the transmitter shall be coupled to a peak diode detector
- The output of the detector shall be connected to an oscilloscope
- The detector and the oscilloscope shall be capable of reproducing the peaks and the duty cycle of the transmitter output signal.
- The peak level of this signal shall be recorded
- The transmitter shall be replaced by a signal generator. The output frequency of the signal shall be made equal to the centre of the frequency range occupied by the transmitter
- The signal generator shall be unmodulated. The output power of the signal generator shall be raised to a level such that the deviation of the Y-trace of the oscilloscope reaches the same level as the transmitter

- The output power level (in dBm) of the signal generator shall be determined using a wideband, calibrated RF power meter with a thermocouple detector or an equivalent thereof
- This level shall be recorded as the peak output power.

Power Spectral Density

Results:

Channel	Power (dBm)	Limit (dBm)
Low	-3.84	8.0
Mid	-3.08	8.0
High	-2.83	8.0
