ILAC / A2LA

Compliance Testing, LLC, has been accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer joint ISO-ILAC-IAF Communiqué dated January 2009)

The tests results contained within this test report all fall within our scope of accreditation, unless noted below

Please refer to <http://www.compliancetesting.com/labscope.html> for current scope of accreditation.

Testing Certificate Number: **2152.01**

FCC OATS Reg, #933597

IC Reg. #2044A-1

Non-accredited tests contained in this report:

N/A

Standard Test Conditions Engineering Practices

Except as noted herein, the following conditions and procedures were observed during the testing.

In accordance with ANSI C63.10-2009 and unless otherwise indicated in the specific measurement results, the ambient temperature of the actual EUT was maintained within the range of 10° to 40°C (50° to 104°F) unless the particular equipment requirements specify testing over a different temperature range. Also, unless otherwise indicated, the humidity levels were in the range of 10% to 90% relative humidity.

Measurement results, unless otherwise noted, are worst-case measurements.

Environmental Conditions		
Temperature (° C)	Humidity (%)	Pressure (mbar)
23.50	32.90	965.200

EUT Description

Model: A781-200

Description: A781-200 Satcom Transceiver

Firmware: N/A

Software: N/A

Additional Information:

Aircraft born satellite communication system

EUT Operation during Testing:

The EUT was in a normal hardware configuration with test software for manual operation of the EUT.

Accessories: None

Cables:

Qty	Description	Length (M)	Shielding Y/N	Shielded Hood Y/N	Termination
1	Standard aircraft equipment tray with associated cabling	Various	Y	Y	No

Modifications: None

Test Results Summary

Specification	Test Name	Pass, Fail, N/A	Comments
2.1046, 87.131	Carrier Output Power (Conducted)	Pass	
2.1051, 87.139(i)(1)	Unwanted Emissions (Transmitter Conducted)	Pass	
2.1053	Field Strength of Spurious Radiation	Pass	
2.1049, 87.139(i)(3)	Emission Masks (Occupied Bandwidth)	Pass	See FCC waiver for allowable variance
2.1047	Audio Low Pass Filter (Voice Input)	N/A	The EUT does not contain an audio input
2.1047	Audio Frequency Response	N/A	The EUT does not contain an audio input
2.1047	Modulation Limiting	N/A	The EUT does not contain an audio input
2.1055, 87.133(a)	Frequency Stability (Temperature Variation)	Pass	
2.1055, 87.133(a)	Frequency Stability (Voltage Variation)	Pass	

A waiver has been granted for this device which includes QAM modulation and extended operational bandwidth. See the waiver for specific details.

Carrier Output Power (Conducted)

Name of Test: Carrier Output Power (Conducted)
Test Equipment Utilized: 06143, i00331, Weinschel #48-40-43

Engineer: John Erhard
Test Date: 5/16/2012

Test Procedure

The Equipment Under Test (EUT) was connected directly to a spectrum analyzer with the RBW set to 1 MHz and the VBW set to 3 X RBW which set the RBW greater than the transmit signal ensuring there was no signal suppression while measuring a modulated signal. The peak readings were taken for each modulation type and the result was then compared to the limit.

Test Setup

BPSK Transmitter Peak Output Power

Tuned Frequency (MHz)	Measured Power (dBm)	Measured Power (W)	Limit (W)	Result
1626.5	45.02	31.77	60	Pass
1643.5	44.95	31.26	60	Pass
1660.5	45.00	31.62	60	Pass

QPSK Transmitter Peak Output Power

Tuned Frequency (MHz)	Measured Power (dBm)	Measured Power (W)	Limit (W)	Result
1626.5	45.01	31.70	60	Pass
1643.5	44.92	31.06	60	Pass
1660.5	45.03	31.84	60	Pass

QAM Transmitter Peak Output Power

Tuned Frequency (MHz)	Measured Power (dBm)	Measured Power (W)	Limit (W)	Result
1626.5	44.99	31.55	60	Pass
1643.5	45.05	31.99	60	Pass
1660.5	44.92	31.05	60	Pass

A waiver has been granted for QAM modulation.

Conducted Spurious Emissions

Name of Test:
Test Equipment Utilized:

Conducted Spurious Emissions
06143, i00331, Weinschel #48-40-43

Engineer: John Erhard
Test Date: 5/17/2012

Test Procedure

The EUT was connected directly to a spectrum analyzer to verify that the UUT met the requirements for spurious emissions. The RBW was set according to the requirements of 87139 (i)(1). The power was corrected for the measurement RBW bandwidth. The dBc limit, the DLNA rejection, and corrected power were summed together to determine the necessary dBm value of the EUT to provide a system rejection greater than the FCC limit. This necessary value was compared to the measured value to ensure compliance to the specification, which is expressed as the margin. A negative value indicates a passing result.

Test Setup

Field Strength of Spurious Radiation

Name of Test:

Field Strength of Spurious Radiation

Engineer: John Erhard

Test Equipment Utilized:

06143, i00331, i00134, i00103

Test Date: 5/17/2012

Test Procedure

A) Connect the equipment as illustrated

B) Adjust the spectrum analyzer for the following settings:

- 1) Resolution Bandwidth 100 kHz (<1 GHz), 1 MHz (> 1GHz).
- 2) Video Bandwidth ≥ 3 times Resolution Bandwidth, or 30 kHz
- 3) Sweep Speed ≤ 2000 Hz/second
- 4) Detector Mode = Mean or Average Power

Place the transmitter to be tested on the turntable in the standard test site. The transmitter is transmitting into a non-radiating load that is placed on the turntable. The RF cable to this load should be of minimum length.

D) For each spurious measurement the test antenna should be adjusted to the correct length for the frequency involved. This length may be determined from a calibration ruler supplied with the equipment. Measurements shall be made from the lowest radio frequency generated in the equipment to the tenth harmonic of the carrier, except for the region close to the carrier equal to $\pm$ the test bandwidth (see section 1.3.4.4).

E) For each spurious frequency, raise and lower the test antenna from 1 m to 4 m to obtain a maximum reading on the spectrum analyzer with the test antenna at horizontal polarity. Repeat this procedure to obtain the highest possible reading. Record this maximum reading.

F) Repeat step E) for each spurious frequency with the test antenna polarized vertically.

G) Reconnect the equipment as illustrated.

H) Keep the spectrum analyzer adjusted as in step B).

I) Remove the transmitter and replace it with a substitution antenna (the antenna should be half-wavelength for each frequency involved). The center of the substitution antenna should be approximately at the same location as the center of the transmitter. At lower frequencies, where the substitution antenna is very long, this will be impossible to achieve when the antenna is polarized vertically. In such case the lower end of the antenna should be 0.3 m above the ground.

J) Feed the substitution antenna at the transmitter end with a signal generator connected to the antenna by means of a non-radiating cable. With the antennas at both ends horizontally polarized and with the signal generator tuned to a particular spurious frequency, raise and lower the test antenna to obtain a maximum reading at the spectrum analyzer. Adjust the level of the signal generator output until the previously recorded maximum reading for this set of conditions is obtained. This should be done carefully repeating the adjustment of the test antenna and generator output.

K) Repeat step J) with both antennas vertically polarized for each spurious frequency.

L) Calculate power in dBm into a reference ideal half-wave dipole antenna by reducing the readings obtained in steps J) and K) by the power loss in the cable between the generator and the antenna and further corrected for the gain of the substitution antenna used relative to an ideal half-wave dipole antenna.

M) The levels recorded in step L) are absolute levels of radiated spurious emissions in dBm. The radiated spurious emissions in dB can be calculated by the following:

Radiated spurious emissions dB = $10\log_{10}(\text{TX power in watts}/0.001)$ – the levels in step I)

NOTE: It is permissible that other antennas provided can be referenced to a dipole.

Test Setup

BPSK 1626.5 MHz Radiated Spurious Emissions

A waiver has been granted for this modulation type.

Emission Masks (Occupied Bandwidth)

Name of Test: Emission Masks (Occupied Bandwidth)

Engineer: John Erhard

Test Equipment Utilized: 06143, i00331, Weinschel # 48-40-43

Test Date: 5/17/2012

Test Procedure

The EUT was connected directly to a spectrum analyzer to verify that the EUT meets the required emissions mask. The reference level was set to the peak power prior to testing the emission mask. The transmitter is digital modulation therefore no data input is required to measure the emission mask. The RBW was set as close as possible to 1% of the span without being under that level to ensure accurate readings.

The FCC waiver for this device allows for the higher order modulations and wide bandwidths.

Test Setup

A waiver has been granted for this modulation type.

Frequency Stability (Temperature Variation)

Name of Test: Frequency Stability (Temperature Variation)

Engineer: John Erhard

Test Equipment Utilized: 06143,i00287, i00343, i00331, Weinschel #48-40-43

Test Date: 5/21/2012

Test Procedure

The EUT was placed in an environmental test chamber and the RF output was connected directly to a frequency counter. The temperature was varied from -30°C to 50°C in 10°C increments. After a sufficient time for temperature stabilization the RF output frequency was measured.

The limit for this device type is 320 Hz.

Test Setup

Measurement Results

Frequency Stability (Voltage Variation)

Name of Test: Frequency Stability (Voltage Variation)

Engineer: John Erhard

Test Equipment Utilized: 06143,i00287, i00343, i00331,Weinschel #48-40-43

Test Date: 5/21/2012

Test Procedure

The EUT was placed in a temperature chamber at $20 \pm 5^\circ\text{C}$ and connected directly to a spectrum analyzer. The power supply voltage to the EUT was varied from 85% to 115% of the nominal value and the RF output was measured. This was measured with 400 Hz 115 VAC variable voltage source.

The limit for this device type is 320 Hz.

The EUT nominal voltage is 115 VAC at 400 HZ. The $\pm 15\%$ voltage variation is 97.75 to 132.25.

Necessary Bandwidth and Emission Bandwidth

Name of Test: Necessary Bandwidth and Emission Bandwidth

Engineer: John Erhard

Test Date: 5/21/2012

BPSK

Modulation = 840HG1D

Necessary Bandwidth Calculation:

Signal States (S)	=	2
Data Rate (D)	=	0.6
Constant Factor (K)	=	0.7
Necessary Bandwidth (B_N), kHz	=	$2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 1K68G1D

Necessary Bandwidth Calculation:

Signal States (S)	=	2
Data Rate (D)	=	1.2
Constant Factor (K)	=	0.7
Necessary Bandwidth (B_N), kHz	=	$2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 21K0G1D

Necessary Bandwidth Calculation:

Signal States (S)	=	2
Data Rate (D)	=	3
Constant Factor (K)	=	3.5
Necessary Bandwidth (B_N), kHz	=	$2 \cdot D \cdot K / \text{LOG}_2(S)$

QPSK

Modulation = 6K80G1E

Necessary Bandwidth Calculation:

Signal States (S)	= 4
Data Rate (D)	= 8.4
Constant Factor (K)	= 0.81
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 7K20G1E

Necessary Bandwidth Calculation:

Signal States (S)	= 4
Data Rate (D)	= 5.6
Constant Factor (K)	= 1.29
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 10K5G1D

Necessary Bandwidth Calculation:

Signal States (S)	= 4
Data Rate (D)	= 10.5
Constant Factor (K)	= 1
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 25K0G7W

Necessary Bandwidth Calculation:

Signal States (S)	= 4
Data Rate (D)	= 33.6
Constant Factor (K)	= 0.74
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 50K0G7W

Necessary Bandwidth Calculation:

Signal States (S)	= 4
Data Rate (D)	= 67.2
Constant Factor (K)	= 0.74
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 100KG7W

Necessary Bandwidth Calculation:

Signal States (S)	= 4
Data Rate (D)	= 134.4
Constant Factor (K)	= 0.74
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 200KG7W

Necessary Bandwidth Calculation:

Signal States (S)	= 4
Data Rate (D)	= 302.4
Constant Factor (K)	= 0.66
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

QAM

Modulation = 40K0G1E

Necessary Bandwidth Calculation:

Signal States (S)	= 16
Data Rate (D)	= 134.4
Constant Factor (K)	= 0.6
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 40K0G1D

Necessary Bandwidth Calculation:

Signal States (S)	= 16
Data Rate (D)	= 134.4
Constant Factor (K)	= 0.6
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 50K0D7W

Necessary Bandwidth Calculation:

Signal States (S)	= 16
Data Rate (D)	= 134.4
Constant Factor (K)	= 0.74
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 100KD7W

Necessary Bandwidth Calculation:

Signal States (S)	= 16
Data Rate (D)	= 268.8
Constant Factor (K)	= 0.74
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$

Modulation = 200KD7W

Necessary Bandwidth Calculation:

Signal States (S)	= 16
Data Rate (D)	= 604.8
Constant Factor (K)	= 0.66
Necessary Bandwidth (B_N), kHz	= $2 \cdot D \cdot K / \text{LOG}_2(S)$
