A green printed circuit board (PCB) with a complex, irregular shape. It features a central black circular component, possibly a lens or sensor, mounted on a blue textured surface. The PCB has several silver-colored solder points and components, including resistors and capacitors. The board is oriented vertically, with the central component facing left. The background is a blue textured surface.

A photograph showing the disassembled components of a portable electronic device, likely a handheld scanner or similar. The components are laid out on a dark blue surface. On the left is a large, black, semi-circular plastic housing. A white plastic hinge or latch mechanism is attached to the left side of the housing. In the center of the housing is a rectangular cutout. To the right of the housing is a clear, rectangular lens or window. Below the lens is a yellow printed circuit board (PCB) populated with various electronic components, including a large black integrated circuit, several resistors, and a connector at the bottom. The PCB is labeled with '3000' and '2000' near the top, and '1000' near the bottom.
