Section 1. Summary of Test Results

General

All measurements are traceable to national standards.

These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with Part 15, Subpart C. All tests were conducted using measurement procedure ANSI C63.4-1992. Radiated emissions are made on an open area test site. A description of the test facility is on file with the FCC.

Para. No.: 15.231(a)

Test Performed By: Kevin Carr

Date of Test: 4 July 2003

Minimum Standard: 15.231(a) Continuous transmissions such as voice, video or data transmissions are not permitted.

15.231(a)(1) A manually operated transmitter shall employ a switch that will automatically deactivate the transmitter within not more than 5 seconds after being released.

15.231(a)(2) A transmitter activated automatically shall cease transmission within 5 seconds of activation.

15.231(a)(3) Periodic transmissions at regular pre-determined intervals are not permitted. However polling or supervisory transmissions to determine system integrity of transmitters used in security or safety applications are allowed if the periodic rate of transmission does not exceed one transmission of not more than one second duration per hour for each transmitter.

15.231(a)(4) Intentional radiators which are employed for radio control purposes during emergencies involving fire, security, and safety of life, when activated to signal an alarm, may operate during the pendency of the alarm.

Test Results: Complies

Test Data: Compliance was determined by verification of technical specifications and a functional test on the equipment.

Notes:		All emissions to the 10 th harmonic were searched. Only those within 25dB of the limit were reported. Receiver bandwidth of 100KHz was used below 1GHz, & 1MHz bandwidth was used on emissions above 1GHz. Emissions were measured at the Ottawa Facility, Range A, at 3 meters									

Duty Cycle Calculation:

$$20 \text{ Log}\{((43 \times 0.6\text{mS}) + (19 \times 0.88\text{mS}) + 4.2\text{mS})/100\text{mS}\} = -6.6 \text{ dB}$$

Section 5. Occupied Bandwidth

Para. No.: 15.231(c)

Test Performed By: Kevin Carr	Date of Test: 4 July 2003
--------------------------------------	----------------------------------

Minimum Standard: 15.231(c) The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices operating above 70 MHz and below 900 MHz. For devices operating above 900 MHz, the emission shall be no wider than 0.5% of the center frequency. Bandwidth is determined at the points 20 dB down from the modulated carrier.
