To whom it may concern,

Purpose of Change Letter

We have a new model PM5851, that is integrate the DAM (Digital Answer Machine) function into the basic model PM5821. The details of change listed below.

- ◆ Difference between the previous models (PM5821).
 1. Handset unit is fully identical with PM5821.
 2. Base main unit is equal to the basic model PM5821 include PCB layout, circuit and RF module. Just integrate the DAM module into the base unit.
 3. Antenna has been changed to match the upper cabinet. Performance of the new antenna fulfilled to FCC rules also.
 4. At the surface, we have two-digit LED display and 12 keys for control use and build in microphone & speaker for record and playback. .
- ◆ Main components added.
 1. Philips DAM MCU PCD6002 . That is control the DAM part include the keyboard, LED display, audio in/output.
 2. ATMEL 4M flash memories. For digital data storage.
 3. Audio amplifier IC UTC8602.

If you have questions or need further information, please contact the undersigned.

Regards,

Timothy Lo
