Low Temperature Life Test Results

DO204 Low Temperature Life test 2.3.2.1 and Self test function at Low Temperature 2.3.2.6 DO-183 2.3.1.1 Low temperature life test

- 1) OBTAIN dme DOC Y1-02-1053, Y1-02-1054 and DO-204,183 documents FOR REFERENCE AND SET UP.
- 2) CONNECT EQUIPMENT UP AS INDICATED IN PARAGRAPH 3.1 of Y1-02-1053
- 3) Perform para. 3.1 through 3.10 of Y1-02-1053
- 4) Instead of connecting equipment as shown in figure 1A of Y1-02-1053, set up as shown here in this attachment called LOW TEMPERATURE LIFE TEST setup using a fresh pre-conditioned discharged battery in the beacon.
- 5) Program Temperature chamber LOW temperature profile as indicated by DO204 para 2.3.2.1 except start from from 23 degree C and ramp down 30 minutes to -55 before starting the 3hr -55 degree soak.
- 6) Set up thermal data acquisition unit with separate PC to monitor chamber temperature and beacon temperature. Program it for at least 50 second intervals but don't have it start acquiring data yet.
- 7) Activate the "burn_in_test_select2.vi" software on PC#1 with all of the test annunciation points turned on with a 59 minute interval and a low temperature file name for the beacon in question. Do not start the acquire process yet.
- 8) Activate the "beaconminiexec.exe" software and highlight all the test annunciation points to gather all the 406 modulation data. Do not start the acquire process yet.
- 9) Activate the chamber test program profile and activate the thermal data acquisition unit to start the test.
- 10) After the -55 degree C 3hr soak and the beacon is then allowed to stabilize at -20 degree C, perform Y1-02-1054 to verify self test and that unit meets operational characteristics of DO-183 after 5 minutes. Continue to perform Y1-02-1053 tests after 15 minutes of warm up utilizing "burn_in_test_select2.vi" on the PC#1 to collect most of the data needed by the Y1-02-1053 data sheet. Run the "beaconminiexec.exe" software after to collect the 406 modulation information for the data sheet.
- 11) Perform paragraphs 4.1.8, and 4.2.3, through 4.2.7 to finish up the data sheet.
- 12) Continue running the "burn_in_test_select2.vi" to collect "aliveness data" every hour to comply with the 6 hr DO204 requirement.
- 13) Stop the "burn_in_test_select2.vi" at the 23 hour point and use the 23 hour data to fill in another Y1-02-1053 and Y1-02-1054 data sheet.
- 14) Run the "beaconminiexec.exe" software after to collect the 406 modulation information for the data sheet at the 23-24 point before the 406 modulation stops.
- 15) Perform paragraphs 4.1.8, and 4.2.3, through 4.2.7 to finish up the data sheet for the 23-24 hour point.
- 16) The beacon is allowed to continue till after the 24 hour point to where the 406 modulation stops.
- 17) The "burn_in_test_select2.VI" is then restarted with a new output file name and with all but the "run_406_power" and the "run_406_sideband" test annunciation points turned on.
- 18) The data is collected every hour to check all the pertinent 121/243 signals to comply with the DO-183 6 hr requirement and to determine when the battery is exhausted to the nearest hour and determine it exceeds 50 hours.
- 19) Plot the temperature data in an Excel spreadsheet from the data acquisition unit PC for the test time interval and print all the "burn_in_test_select2.VI" data collected and the beaconminiexec.exe data collected.

Qualification Data Sheet

Date: 2/12/03	Test: COLD LIFE TEST / MELT TEST
Test Unit Description	SRB-406 ELT, PN P3-03-0041-001, revision 05, AT COLD Serial # 2007
