Description of Test Item

The EUT is a Wireless Microphone (ALD) with Frequency Hopping and Fixed Control Carrier. Several Wireless Microphones may be synchronized, for this the system uses a Control Carrier at 2402, 2450 or 2480 MHz. Control Carriers use Dynamic Frequency Selection.

This device has been tested as a DTS system and fulfils all requirements for a DTS systems. The only difference between hopping carriers and control carriers is duty cycle and output power.

1.2 Normal test condition

Temperature:	20–25 °C
Relative humidity	20–50 %
Air pressure	860–1060 mbar
Normal test voltage	3.7 V _{DC} (Nominal Voltage)

All tests were performed with the EUT powered from a fully charged battery. For radiated emissions tests the EUT was also powered from a USB charger supplied by the manufacturer. Power Line Conducted emissions Tests were performed with the supplied power adaptor.

Values above are the limit registered during the test period.

1.3 Test Engineer

Frode Sveinsen

1.4 Antenna Requirement

Does the EUT have detachable antenna(s)?	☐ YES	☒ NO
If detachable, is the antenna connector(s) non-standard?	☐ YES	☐ NO
The tested equipment has only integral antennas. Conducted tests with a temporary antenna connector.		

Requirement: FCC 15.203, 15.204

1.5 Comments

The EUT uses frequency hopping with 40 hopping channels from 2402 to 2480 MHz. Additionally, the EUT transmit a control signal on alternatingly on 2402, 2450 and 2480 MHz. The control signal is transmitted with the same modulation and bandwidth but with reduced Output Power.

Radiated measurements were done with the EUT powered by a fully charged battery. Measurements below 1 GHz was performed with the EUT charging from a USB power adaptor.

Antenna Conducted tests were performed with the EUT powered from a regulated power supply. It was also checked that power variations of ± 15 % did not have any influence on Output Power.

2 TEST REPORT SUMMARY

2.1 General

All measurements are traceable to national standards.

The tests were conducted for demonstrating compliance with FCC CFR 47 Part 15, paragraph 15.247 and Industry Canada RSS-247 Issue 2 and RSS-GEN Issue 5.

Tests were performed in accordance with ANSI C63.4-2014 and ANSI C63.10-2013.

Radiated tests were made in a semi-anechoic chamber at measuring distances of 1m and 3m.

A description of the test facility is on file with FCC and ISSED.

3.8 Spurious Emissions (Radiated)

FCC Part 15.209

Test Results: Complies

Measurement Data:

	Measured field strength (dBμV/m)		Limit (dBμV/m)	Margin (dB)	
	2390 MHz	2483.5 MHz			
Peak Detector	63.2	72.5	74	10.8	1.5
Average Detector	43.2	52.5	54	10.8	1.5

Band Edge is measured with the EUT transmitting with Max Power on 2402 and 2480 MHz

In normal mode the EUT is always hopping with minimum 20 hopping channels when transmitting at Max Power.

Low Power is only used for Control Beacons, Control Beacons are transmitted on 2402, 2450 or 2480 MHz.

All Radiated Emissions tests were performed with the EUT transmitting on a fixed channel with Max Power.

Average values are calculated from Peak Values using the appropriate Duty Cycle correction factor.

See attached plots.

Duty Cycle Correction Factors

When transmitting at Max Power (2402 MHz to 2476 MHz):

$$\begin{aligned} \text{Correction Factor} &= -20 \times \log(\text{Sum of Bursts} / (\text{Frame Length} \times (\text{Min \# Hopping Channels} / \text{Bursts per frame}))) \\ &= -20 \times \log((0.140 + 3 \times 0.164) / (4.000 \times (20 / 4))) \text{ dB} = -20 \times \log(0.632 / 20) = 30.0 \text{ dB} \end{aligned}$$

Maximum Allowed Correction Factor = 20 dB

EUT Transmits one BEACON packet (140μs) and 3 AUDIO packets (164μs) per frame, for each packets the frequency is chosen randomly and equally. BEACON and AUDIO packets are transmitted at full power.

When transmitting at Low Power (2402, 2450 and 2480 MHz):

$$\begin{aligned} \text{Correction Factor} &= -20 \times \log(\text{Beacon Length} / \text{Frame Length}) \\ &= -20 \times \log(0.096 / 4.000) \text{ dB} = 32.4 \text{ dB} \end{aligned}$$

Maximum Allowed Correction Factor = 20 dB

EUT transmits one FHS (96μs) on each Control Channel (2402, 2450 and 2480 MHz) for every Frame. FHS packets are transmitted at low power

6 BLOCK DIAGRAM

6.1 Power Line Conducted Emission

6.2 Test Site Radiated Emission

This test setup is used for all radiated emissions tests. The measuring distance is 3m or 1m. Emissions above 1 GHz are measured with a Spectrum Analyzer and Horn Antenna.

For measurements above 18 GHz the test receiver is moved inside the anechoic chamber and located next to the antenna to minimize the cable loss. All measurements at 1GHz and above were performed with turntable height 1.5m and with the ground plane covered by absorbers. A pre-amplifier is used for all measurements, and High-Pass filter is used for all harmonics.
