Code of Federal Regulations 47 Part 15 – Radio Frequency Devices

Subpart C – Intentional Radiators Section 15.231

Periodic operation in the band 40.66 - 40.70 MHz
and above 70 MHz

THE FOLLOWING **MEETS** THE ABOVE TEST SPECIFICATION

FCC ID: KXU-CBTXC

Formal Name:	Smart Sense Infant Transmitter
Kind of Equipment:	Wireless Infant Security Device
Frequency Range:	318 MHz and 66 kHz
Test Configuration:	Body-worn, battery operated device tested in three orthogonal positions.
Model Number(s):	9450-6066
Model(s) Tested:	9450-6066
Serial Number(s):	Test Sample 1B – normal operation Test Sample 66B – FCC test firmware
Date of Tests:	April 25 th through 27 th , 2018
Test Conducted For:	RF Technologies, Inc. 3125 N. 126 th Street Brookfield, WI 53005

Project Number: 9619

1.0 Summary of Test Report

It was determined that the Smart Sense Infant Transmitter, Model 9450-6066, complies with the requirements of CFR 47 Part 15 Subpart C Section 15.231.

Subpart C Applicable Technical Requirements Tested:

Section	Description	Procedure	Note	Compliant?
15.231(c)	20 dB Emission Bandwidth	ANSI C63.10-2013	2	Yes
15.231(a)(2)	Transmission Deactivation	ANSI C63.10-2013	2	Yes
15.231(a)(3)	Periodic Transmissions	ANSI C63.10-2013	2	Yes
15.231(b)	Field Strength of Emissions - Fundamental and Spurious -	ANSI C63.10-2013	1,2	Yes
15.35(c)	Duty Cycle Correction for Pulsed operation	ANSI C63.10-2013	2	Informative

Note 1: Tested in 3 orthogonal planes.

Note 2: Radiated emission measurement.

2.0 Introduction

On April 25th through 27th, 2018 the Smart Sense Infant Transmitter, Model 9450-6066, as provided from RF Technologies Inc. was tested to the requirements of CFR 47 Part 15 Subpart C Section 15.231. To meet these requirements, the procedures contained within this report were performed by personnel of D.L.S Electronic Systems, Inc.

166 South Carter, Genoa City, WI 53128

Company:	RF Technologies
Model Tested:	9450-6066
Report Number:	23691a

3.0 Test Facilities

D.L.S. Electronic Systems, Inc. is a full service EMC/Safety Testing Laboratory accredited to ISO 17025. NVLAP Certificate and Scope can be viewed at <http://www.dlsemc.com/certificate>. Our facilities are registered with the FCC, Innovation Science and Economic Development Canada, and VCCI.

Wisconsin Test Facility:

D.L.S. Electronic Systems, Inc.
166 S. Carter Street
Genoa City, Wisconsin 53128

Wheeling Test Facility:

D.L.S. Electronic Systems, Inc.
1250 Peterson Drive
Wheeling, IL 60090

FCC Registration #90531

4.0 Description of Test Sample

Description:

The device is a wireless security device intended to prevent the abduction of an infant from a healthcare facility. The device is attached to the ankle of an infant with a stretchable band material, and it is this attachment which enables the monitoring features. Once enabled, the device will periodically send status OK messages wirelessly on a 318 MHz signal to a central computer server which means the infant is within the safe boundary at the healthcare facility. The device can sense security breaches using one or more of the following features: physical cutting of the stretchy band material, a change in resistance of the band material, or a change in capacitive patient proximity measurement. Once a security breach is experienced, the device sends a special alarm signal wirelessly on a 318 MHz RF signal to a central computer server thereby notifying the facility staff. The device also transmits wirelessly periodically at 66 kHz which will cause wireless receivers mounted, for example, at doors to indicate a security breach in the event the device is brought in close proximity to those receivers. The transmitters do not transmit simultaneously on the 318 MHz and 66 kHz.

Type of Equipment / Frequency Range:

Body-Worn / 318 MHz and 66 kHz

Physical Dimensions of Equipment Under Test:

Length: 1.6 in. x Width: 1.2 in. x Height: 0.675 in.

166 South Carter, Genoa City, WI 53128

Company:	RF Technologies
Model Tested:	9450-6066

Model Tested:	9450-6066
Report Number:	23691a
Project Number:	9619

6.0 Test Arrangements

Radiated Emissions Measurement Arrangement:

All radiated emission measurements were performed at D.L.S. Electronic Systems, Inc. and set up according to ANSI C63.10-2013, unless otherwise noted. Description of procedures and measurements can be found in Appendix B – Measurement Data. See Appendix A for additional photos of the test set up. See Appendix C for measurement uncertainty.

Unless otherwise noted, the bandwidth of the measuring receiver / analyzer used during testing is shown below.

Frequency Range	Bandwidth (-6 dB)
10 to 150 kHz	200 Hz
150 kHz to 30 MHz	9 kHz
30 MHz to 1 GHz	120 kHz
Above 1 GHz	1 MHz

7.0 Test Conditions

Temperature and Humidity:

70°F at 29% RH

Battery Voltage:

3.6 VDC

8.0 Modifications Made To EUT For Compliance

None noted at time of test.

166 South Carter, Genoa City, WI 53128

Company:	RF Technologies
Model Tested:	9450-6066
Report Number:	23691a
Project Number:	9619

9.0 Additional Descriptions

This device uses periodic transmissions for security or safety application as defined in FCC Part 15.231(a) (3) and does not exceed a total transmission time of two seconds per hour. Appendix B of this report shows data to confirm compliance with this rule section.

The EUT was programmed to transmit in a special test mode that allowed it to stay transmitting for one second, then off for three seconds, and then repeat that sequence continuously. For testing done in “normal operation mode” the EUT was programmed to use the largest duty cycle possible during normal operation.

Note that the 66 kHz transmitter is exempt from certification as defined by section 15.201(a). All emissions from that transmitter are greater than 40 dB below the limit. Measurement data can be seen in DLS Report #23691b.

The 318 MHz transmitter in this model is identical to the 318 MHz transmitter in model 9450-6262 (FCC ID: KXU-CBTX3, DLS test report # 23685a). Both models, 9450-6262 and 9450-6066, were tested for fundamental and spurious emissions and the worst-case measurement data can be seen in Appendix B of this report.

10.0 FCC 15.31 (e) Supply Voltage Requirement statement

FCC 15.31 (e) - For intentional radiators, measurements of the variation of the input power or the radiated signal level of the fundamental frequency component of the emission, as appropriate, shall be performed with the supply voltage varied between 85% and 115% of the nominal rated supply voltage.

Compliance Statement: This device complies with the requirements of Part 15.31(e):

- ☒ This device is battery operated. All tests were performed using a new (or fully charged) battery.
- ☐ This device provides a constant regulated voltage to the RF circuitry regardless of supply voltage (see schematic diagrams).
- ☐ This device does not provide a constant regulated voltage to the RF circuitry regardless of supply voltage. Data has been supplied in this test report that supports compliance. Details:

166 South Carter, Genoa City, WI 53128

Company:	RF Technologies
Model Tested:	9450-6066
Report Number:	23691a
Project Number:	9619

11.0 FCC 15.203 Antenna Requirement statement

SECTION 15.203 ANTENNA REQUIREMENT

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.... This requirement does not apply to carrier current devices or to devices operated under the provisions of Sections 15.211, 15.213, 15.217, 15.219, or 15.221.

Statement: This wireless device (Intentional Radiator) meets the requirements of FCC Part 15.203:

- ☒ The antenna is permanently attached
- ☐ The antenna has a unique coupling to the intentional radiator.
Description of coupling:
- ☐ This intentional radiator is professionally installed
- ☐ This intentional radiator, in accordance with Section 15.31(d), must be measured at the installation site.

12.0 Results

Measurements were performed in accordance with ANSI C63.10-2013. Graphical and tabular data can be found in Appendix B at the end of this report.

13.0 Conclusion

The Smart Sense Infant Transmitter, Model 9450-6066 as provided from RF Technologies, Inc., tested on April 25th through 27th, 2018 **meets** the requirements of CFR 47 Part 15 Subpart C Section 15.231.

Appendix B – Measurement Data

1.0 Emission Bandwidth – 20 dB

Rule Part:

Section 15.231 (c)

Test Procedure:

ANSI C63.10-2013

Limit:

Section 15.231 (c):

$318 \text{ MHz} \times 0.25\% = 795 \text{ kHz}$

Results:

Compliant

20 dB bandwidth: **26.1 kHz**

Sample Equation(s):

None

Notes:

This was a radiated emissions measurement. The maximum field strength of the emission was determined and the bandwidth was measured from the points at 20 dB down from the modulated carrier.

Company:	RF Technologies
Model Tested:	9450-6066
Report Number:	23691a
Project Number:	9619

Appendix B

4.0 Field Strength of Emissions – Fundamental and Spurious (318 MHz)

Rule Part:

15.231 (b) including 15.205

Test Procedure:

ANSI C63.10-2013

Limit:

Fundamental (F) $\mu\text{V/m}$ at 3 meters: 41.6667(F) – 7083.3333

The maximum permitted unwanted emission level is 20 dB below the maximum permitted fundamental level.

Results:

Compliant

Sample Equation(s):

$41.6667(\text{F}) - 7083.3333 = 6166.67 \mu\text{V/m}$ at 3 meters

$20 * \log(6166.67) = 75.80 \text{ dB } \mu\text{V/m}$ at 3 meters

Final Corrected = Total Level - Duty Cycle Correction

Margin = Limit - Final Corrected

Total Level = Level + System Loss + Antenna Factor

Notes:

The emissions were measured of the fundamental and spurious at a distance of three meters between the EUT and the measuring antenna. The EUT was rotated in 3 orthogonal planes and the highest emission was recorded. Since the unit was not able to transmit continuously at a 100 % duty cycle, compliance is determined by comparing peak data, minus duty cycle correction, to the average limit.

The 318 MHz transmitter in this model is identical to the 318 MHz transmitter in model 9450-6262 (FCC ID: KXU-CBTX3, DLS test report #23685a). Both models, 9450-6262 and 9450-6066, were tested for fundamental and spurious emissions and the worst-case measurement data (found to be from model 9450-6262) is reported.

166 South Carter, Genoa City, WI 53128

Company: RF Technologies
 Model Tested: 9450-6066
 Report Number: 23691a
 Project Number: 9619

Appendix B

Radiated Fundamental and Spurious Emissions – 30 MHz to 3.2 GHz Tested at a 3 Meter Distance

EUT: 9450-6262: Smart Sense Infant Transmitter
 Manufacturer: RF Technologies
 Operating Condition: 70 deg F; 29% R.H.
 Test Site: Site 2
 Operator: Craig B
 Test Specification: FCC Part 15.231(b)
 Comment: Battery Operated
 Date: 04-25-2018

Notes: All other emissions at least 20 dB under the limit.
 Since unit was not able to transmit continuously, all measurements were made with a peak detector.

Legend: H=Harmonic ; RB=Restricted Band ; F=Fundamental

Level = Total Level - System Loss - Antenna Factor

Final Corrected = Total Level - Duty Cycle Correction

Margin = Limit - Final Corrected

Model Tested:	9450-6066
Report Number:	23691a
Project Number:	9619

5.0 Duty Cycle Correction (318 MHz)

Rule Part:

15.35 (c)

Test Procedure:

ANSI C63.10-2013

Limit:

Informative

Results:

Duty Cycle Correction Factor = -24.4 dB

Sample Equation(s):

Duration of one transmit time: 6.012024 ms

Number of transmit times during 100 ms period: 1

Total ON time in 100 ms = 6.012024 ms

Duty Cycle correction = $20 \log (6.012024/100) = -24.4 \text{ dB}$

Notes:

Since the unit was not able to transmit continuously, compliance is determined by comparing peak data, minus duty cycle correction, to the average limit.

Since there is a limit of Peak emission that is only 20 dB above the limit of Average emission, a duty cycle correction factor greater than 20 dB would not be beneficial. Therefore, a duty cycle correction of 20 dB was applied to the Peak detector measurement level to show compliance to the average limits.

Appendix B

Normal Operation

Test Date: 04-25-2018
Company: RF Technologies
EUT: 9450-6262 (and 9450-6066) Smart Sense Infant Transmitter
Test: Duty Cycle – worst case for normal operation
Operator: Craig B

Comment: Duration of one transmit time: 6.012024 ms
Number of transmit times during 100 ms period: 1
Total ON time in 100 ms = 6.012024 ms
Duty Cycle correction = $20 \log (6.012024/100) = -24.4 \text{ dB}$

100 ms sweep:

Date: 25.APR.2018 10:24:41

Appendix B

Test Mode

Test Date: 04-25-2018
Company: RF Technologies
EUT: 9450-6262 (and 9450-6066) Smart Sense Infant Transmitter
Test: Duty Cycle – special mode for testing purposes
Operator: Craig B

Comment: One wide pulse: 1 second
Total ON time in 100 ms = 100 ms

Date: 25.APR.2018 09:10:14

166 South Carter, Genoa City, WI 53128

Company: RF Technologies
Model Tested: 9450-6066

Appendix C – Measurement Uncertainty

Compliance with the limits in this standard are based on the results of the compliance measurement. Our calculated measurement uncertainty including the measurement instrumentation, associated connections between the various instruments in the measurement chain, and other contributions, are provided in this section of the test report.

Radiated Emission 30 MHz to 18 GHz Uncertainty

		Uncertainty (+/- dB)	Uncertainty (+/- dB)	Uncertainty (+/- dB)	Uncertainty (+/- dB)	Uncertainty (+/- dB)	Uncertainty (+/- dB)	Uncertainty (+/- dB)	Uncertainty (+/- dB)	Uncertainty (+/- dB)
Contribution	Probability Distribution	3M	3M	3M	3M	3M	3M	10M	10M	10M
		30- 100MHz.	100- 700MHz	700- 1000MHz.	1- 4.5Ghz	4.5 - 7Ghz	7 - 18Ghz	30- 100MHz.	100- 700MHz.	700- 1000MHz.
Combined Standard Un- certainty	Normal	1.70	1.62	1.66	2.13	2.48	2.85	1.64	1.58	1.66
